*Graphene Quantum Dots* Alev Devrim Güçlü, Pawel Potasz, Marek Korkusinski, Pawel Hawrylak, 2014-09-11 This book reflects the current status of theoretical and experimental research of graphene based nanostructures, in particular quantum dots, at a level accessible to young researchers, graduate students, experimentalists and theorists. It presents the current state of research of graphene quantum dots, a single or few monolayer thick islands of graphene. It introduces the reader to the electronic and optical properties of graphite, intercalated graphite and graphene, including Dirac fermions, Berry's phase associated with sublattices and valley degeneracy, covers single particle properties of graphene quantum dots, electron-electron interaction, magnetic properties and optical properties of gated graphene nanostructures. The electronic, optical and magnetic properties of the graphene quantum dots as a function of size, shape, type of edge and carrier density are considered. Special attention is paid to the understanding of edges and the emergence of edge states for zigzag edges. Atomistic tight binding and effective mass approaches to single particle calculations are performed. Furthermore, the theoretical and numerical treatment of electron-electron interactions at the mean-field, HF, DFT and configuration-interaction level is described in detail.

**Optically Stimulated Luminescence Dosimetry** L. Boetter-Jensen, S.W.S. McKeever, A.G. Wintle, 2003-10-24 Optically Stimulated Luminescence (OSL) has become the technique of choice for many areas of radiation dosimetry. The technique is finding widespread application in a variety of radiation dosimetry fields, including personal monitoring, environmental monitoring, retrospective dosimetry (including geological dating and accident dosimetry), space dosimetry, and many more. In this book we have attempted to synthesize the major advances in the field, covering both fundamental understanding and the many applications. The latter serve to demonstrate the success and popularity of OSL as a dosimetry method. The book is designed for researchers and radiation dosimetry practitioners alike. It delves into the detailed theory of the process from the point of view of stimulated relaxation phenomena, describing the energy storage and release processes phenomenologically and developing detailed mathematical descriptions to enable a quantitative understanding of the observed phenomena. The various stimulation modes (continuous wave, pulsed, or linear modulation) are introduced and

compared. The properties of the most important synthetic OSL materials beginning with the dominant carbon-doped Al<sub>2</sub>O<sub>3</sub>, and moving through discussions of other, less-well studied but nevertheless important, or potentially important, materials. The OSL properties of the two most important natural OSL dosimetry material types, namely quartz and feldspars are discussed in depth. The applications chapters deal with the use of OSL in personal, environmental, medical and UV dosimetry, geological dating and retrospective dosimetry (accident dosimetry and dating). Finally the developments in instrumentation that have occurred over the past decade or more are described. The book will find use in those laboratories within academia, national institutes and the private sector where research and applications in radiation dosimetry using luminescence are being conducted. Potential readers include personnel involved in radiation protection practice and research, hospitals, nuclear power stations, radiation clean-up and remediation, food irradiation and materials processing, security monitoring, geological and archaeological dating, luminescence studies of minerals, etc.

Quantum Brownian Motion Revisited Aniello Lampo, Miguel Ángel García March, Maciej Lewenstein, 2019-04-23 Quantum Brownian motion represents a paradigmatic model of open quantum system, namely a system inextricably coupled to the surrounding environment. Such a model is largely used in physics, for instance in quantum foundations to approach in a quantitative manner the quantum-to-classical transition, but also for more practical purposes as the estimation of decoherence in quantum optics experiments. This book presents the main techniques aimed to treat the dynamics of the quantum Brownian particle: Born-Markov master equation, Lindblad equation and Heisenberg equations formalism. Particular attention is given to the interaction between the particle and the bath depends non-linearly on the position of the former. This generalization corresponds to the case in which the bath is not homogeneous. An immediate application is the Bose polaron, specifically an impurity embedded in an ultracold gas.

**Mathematical Methods Of Theoretical Physics** Karl Svozil, 2020-02-24 'This book could serve either as a good reference to remind students about what they have seen in their completed courses or as a starting point to show what needs more investigation. Svozil (Vienna Univ. of Technology) offers a very thorough text that leaves no mathematical area out, but it is best described as giving a synopsis of each application and how it relates to other areas ... The text is organized well and provides a good reference list. Summing Up: Recommended. Upper-division undergraduates and graduate students.' CHOICE This book contains very explicit proofs and demonstrations through examples for a comprehensive introduction to the mathematical methods of theoretical physics. It also combines and unifies many expositions of this subject, suitable for readers with interest in experimental and applied physics.

Subjective Time Valtteri Arstila, Dan Lloyd, 2021-12-14 Interdisciplinary perspectives on the feature of conscious life that scaffolds every act of cognition: subjective time. Our awareness of time and temporal properties is a constant feature of conscious life. Subjective temporality structures and guides every aspect of behavior and cognition, distinguishing memory, perception, and anticipation. This milestone volume brings together research on temporality from leading scholars in philosophy, psychology, and neuroscience, defining a new field of interdisciplinary research. The book's thirty chapters include selections from classic texts by William James and Edmund Husserl and new essays setting them in historical context; contemporary philosophical accounts of lived time; and current empirical studies of psychological time. These last chapters, the larger part of the book, cover such topics as the basic psychophysics of psychological time, its neural foundations, its interaction with the body, and its distortion in illness and altered states of consciousness. Contributors Melissa J. Allman, Holly Andersen, Valtteri Arstila, Yan Bao, Dean V. Buonomano, Niko A. Busch, Barry Dainton, Sylvie Droit-Volet, Christine M. Falter, Thomas Fraps, Shaun Gallagher, Alex O. Holcombe, Edmund Husserl, William James, Piotr Jaśkowski, Jeremie Jozefowicz, Ryota Kanai, Allison N. Kurti, Dan Lloyd, Armando Machado, Matthew S. **Identity and Image** Jutta Vinzent, 2006-06-22 This book explores the image and identity of émigré painters, sculptors and graphic artists from Nazi Germany in Britain between 1933 and 1945. It focuses on a neglected field of Exile Studies, that of exiled artists in Britain. Methodologies used in this study have been developed by Exile Studies and History of Art, but also by Postcolonialism, scholars of which usually apply their ideas to the Afro-Asian emigration of the second part of the twentieth century. Thus this study represents methodologically a new way of looking at the emigration from Nazi Germany. Identity and Image is divided into five chapters: After an introductory Chapter One (historiography of the topic, methodology of the study, structure of the book), Chapter Two establishes socio-political patterns of emigration and provides an historical

framework for Chapters Three and Four, which concentrate on the image and identity of the refugee artist, the former based on written sources and the latter on visual material. In detail, Chapter Three analyses the British image of the refugee artists and their works on the one hand and the émigrés' self-representations on the other, the latter exemplified by refugee organisations (the Free German League of Culture/Freier Deutscher Kulturbund, the Austrian Centre, the Anglo-Sudeten Club and the Czech Institute) and institutions founded by émigré artists (Jack Bilbo's Modern Art Gallery and Arthur Segal's Painting School). Chapter Four examines the works produced in internment and those exhibited and produced for the refugee organisations discussed in Chapter Three. Chapter Five discusses the results of this study in the light of three postcolonial concepts: diaspora communities, the notion of home and the gendered identity of the refugee. The appendix lists all painters, sculptors and graphic artists from Nazi Germany in Britain with biographical details. Apart from visual and written sources discussed for the first time, there are two major results of the study: First, although the artists were united as refugees, this unity did not lead to a unity in art - refugee art is a construction put forward by the British press and the refugee organisations, particularly the Free German League of Culture. Second, contrary to claims that modern art was international and formed a universal unity that transgressed nationality, neither the West/Europe nor modernism form unities; instead, in the 1930s and 1940s, cultures in Europe constructed conceptions of other European cultures on the basis of nation-state identities.

*Organic Thermoelectric Materials* Zhiqun Lin, Ming He, 2019-10-18 This book summarises the significant progress made in organic thermoelectric materials, focusing on effective routes to minimize thermal conductivity and maximize power factor.

Nonlinear Photonics Hyatt M. Gibbs, Galina Khitrova, Nasser Peyghambarian, 2012-12-06 Nonlinear photonics is the name given to the use of nonlinear optical devices for the generation, communication, processing, or analysis of information. This book is a progress report on research into practical applications of such devices. At present, modulation, switching, routing, decision-making, and detection in photonic systems are all done with electronics and linear optoelectronic devices. However, this may soon change, as nonlinear optical devices, e.g. picosecond samplers and switches, begin to complement optoelectronic devices. The authors succinctly summarize past accomplishments in this field and point to hopes for the future, making this an ideal book for newcomers or seasoned researchers wanting to design and perfect nonlinear optical devices and to identify applications in photonic systems.

**Foundations of Modern Arab Identity** Stephen Paul Sheehi, 2009-09-24 Examines a crucial period in Arabic literature which has received insufficient attention previously--the pre-modern writers of the 19th century . . . whose journalism and fiction not only shaped contemporary opinion but also subtly molded the contours and boundaries of discourse for the generations that followed.--Michael Beard, University of North Dakota Dynamic and original, this study of the formation of

modern Arab identity discusses the work of pioneers of the Arab Renaissance, both renowned and forgotten--a pantheon of intellectuals, reformers, and journalists whose writing until now has been mostly untranslated. Against the backdrop of European imperialism in the Arab world, these literati planted the roots of modernity through their experiments in language, rhetoric, and literature. In both fiction and nonfiction they generated a radically new sense of Arab identity. At the same time, Sheehi argues, they created the terrain that produced an Arab preoccupation with failure and a perception of Western superiority--the terms intellectuals themselves used in the 19th century in diagnosing their cultural crisis. Neglected by historians, this ambivalent and contradictory state of consciousness is at the heart of the ideology of Arab identity, Sheehi says, and it describes a variety of subjective positions that Arabs would adopt throughout the 20th century. It became the intellectual quicksand for the Arab world's confrontation with colonialism, capitalist expansion, and individual state formation. Using psychoanalytic and post-structuralist theory, Sheehi looks at texts by writers such as Butrus al-Bustani, Ahmad Faris al-Shidyaq, Muhammad al-Muwaylihi, and Muhammad Abduh. His analysis deconstructs popular and academic perceptions--especially prevalent after 9/11--that Arabs have failed to internalize modernity. Indeed, he says, Christian secularists, Islamic modernists, and romantic nationalists alike have produced a body of knowledge and shared an epistemology that constitute modernity in the Arab world. Starting in Middle Eastern literature and intellectual history and ending in postcolonial studies, this groundbreaking work offers a sophisticated counter-theoretical framework for understanding and reevaluating modern Arabic literature and also the history and historiography of Arab nationalism.

Expressionist Utopias Timothy O. Benson, Edward Dimendberg, 2001 Conveys the dreams and disappointments of German artists, architects, and intellectuals from World War I through the social and economic chaos of the Weimar Republic.

*Ceramic Materials* C. Barry Carter, M. Grant Norton, 2013-01-04 Ceramic Materials: Science and Engineering is an up-to-date treatment of ceramic science, engineering, and applications in a single, comprehensive text. Building on a foundation of crystal structures, phase equilibria, defects, and the mechanical properties of ceramic materials, students are shown how these materials are processed for a wide diversity of applications in today's society. Concepts such as how and why ions move, how ceramics interact with light and magnetic fields, and how they respond to temperature changes are discussed in the context of their applications. References to the art and history of ceramics are included throughout the text, and a chapter is devoted to ceramics as gemstones. This course-tested text now includes expanded chapters on the role of ceramics in industry and their impact on the environment as well as a chapter devoted to applications of ceramic materials in clean energy technologies. Also new are expanded sets of text-specific homework problems and other resources for instructors. The revised and updated Second Edition is further enhanced with color illustrations throughout the text.

**Critical Zones** Bruno Latour, Peter Weibel, 2020-10-13 Artists and writers portray the disorientation of a world facing climate change. This monumental volume, drawn from a 2020 exhibition at the ZKM Center for Art and Media, portrays the disorientation of life in a world facing climate change. It traces this disorientation to the disconnection between two different definitions of the land on which modernizing humans live: the sovereign nation from which they derive their rights, and another one, hidden, from which they gain their wealth—the land they live on, and the land they live from. Charting the land they will inhabit, they find not a globe, not the iconic “blue marble,” but a series of critical zones—patchy, heterogeneous, discontinuous. With short pieces, longer essays, and more than 500 illustrations, the contributors explore the new landscape

on which it may be possible for humans to land—what it means to be “on Earth,” whether the critical zone, the Gaia, or the terrestrial. They consider geopolitical conflicts and tools redesigned for the new “geopolitics of life forms.” The “thought exhibition” described in this book can open a fictional space to explore the new climate regime; the rest of the story is unknown. Contributors include Dipesh Chakrabarty, Pierre Charbonnier, Emanuele Coccia, Vinciane Despret, Jérôme Gaillarde, Donna Haraway, Joseph Leo Koerner, Timothy Lenton, Richard Powers, Simon Schaffer, Isabelle Stengers, Bronislaw Szerszynski, Jan A. Zalasiewicz, Siegfried Zielinski Copublished with ZKM | Center for Art and Media Karlsruhe

**Quantum Theory of the Electron Liquid** Gabriele Giuliani, Giovanni Vignale, 2008-06-19 Modern electronic devices and novel materials often derive their extraordinary properties from the intriguing, complex behavior of large numbers of electrons forming what is known as an electron liquid. This book provides an in-depth introduction to the physics of the interacting electron liquid in a broad variety of systems, including metals, semiconductors, artificial nano-structures, atoms and molecules. One, two and three dimensional systems are treated separately and in parallel. Different phases of the electron liquid, from the Landau Fermi liquid to the Wigner crystal, from the Luttinger liquid to the quantum Hall liquid are extensively discussed. Both static and time-dependent density functional theory are presented in detail. Although the emphasis is on the development of the basic physical ideas and on a critical discussion of the most useful approximations, the formal derivation of the results is highly detailed and based on the simplest, most direct methods.

But no one expects what happens when the pen pals come face to face at last. An enduring bestseller in its native Japan, *Yours Sincerely, Giraffe* is a funny tale of mistaken assumptions and friendship.
