Lifespan David A. Sinclair,Matthew D. LaPlante,2019-09-10 A NEW YORK TIMES BESTSELLER “Brilliant and enthralling.” —The Wall Street Journal A paradigm-shifting book from an acclaimed Harvard Medical School scientist and one of Time’s most influential people. It’s a seemingly undeniable truth that aging is inevitable. But what if everything we’ve been taught to believe about aging is wrong? What if we could choose our lifespan? In this groundbreaking book, Dr. David Sinclair, leading world authority on genetics and longevity, reveals a bold new theory for why we age. As he writes: “Aging is a disease, and that disease is treatable.” This eye-opening and provocative work takes us to the frontlines of research that is pushing the boundaries on our perceived scientific limitations, revealing incredible breakthroughs—many from Dr. David Sinclair’s own lab at Harvard—that demonstrate how we can slow down, or even reverse, aging. The key is activating newly discovered vitality genes, the descendants of an ancient genetic survival circuit that is both the cause of aging and the key to reversing it. Recent experiments in genetic reprogramming suggest that in the near future we may not just be able to feel younger, but actually become younger. Through a page-turning narrative, Dr. Sinclair invites you into the process of scientific discovery and reveals the emerging technologies and simple lifestyle changes—such as intermittent fasting, cold exposure, exercising with the right intensity, and eating less meat—that have been shown to help us live younger and healthier for longer. At once a roadmap for taking charge of our own health destiny and a bold new vision for the future of humankind, *Lifespan* will forever change the way we think about why we age and what we can do about it.

Superlative MATTHEW D. LAPLANTE,2019-04-30 2019 Foreword Indie Silver Award Winner for Science Welcome to the biggest, fastest, deadliest science book you'll ever read. The world's largest land mammal could help us end cancer. The fastest bird is showing us how to solve a century-old engineering mystery. The oldest tree is giving us insights into climate change. The loudest whale is offering clues about the impact of solar storms. For a long time, scientists ignored superlative life forms as outliers. Increasingly, though, researchers are coming to see great value in studying plants and animals that exist on the outermost edges of the bell curve. As it turns out, there's a lot of value in paying close attention to the oddballs nature has to offer. Go for a swim with a ghost shark, the slowest-evolving creature known to humankind, which is teaching

us new ways to think about immunity. Get to know the axolotl, which has the longest-known genome and may hold the secret to cellular regeneration. Learn about *Monorhaphis chuni*, the oldest discovered animal, which is providing insights into the connection between our terrestrial and aquatic worlds. Superlative is the story of extreme evolution, and what we can learn from it about ourselves, our planet, and the cosmos. It's a tale of crazy-fast cheetahs and super-strong beetles, of microbacteria and enormous plants, of whip-smart dolphins and killer snakes. This book will inspire you to change the way you think about the world and your relationship to everything in it.

The Science and Technology of Growing Young Sergey Young, 2021-08-24 Wall Street Journal, USA Today, and Publishers Weekly bestseller The prospect of living to 200 years old isn't science fiction anymore. A leader in the emerging field of longevity offers his perspective on what cutting-edge breakthroughs are on the horizon, as well as the practical steps we can take now to live healthily to 100 and beyond. In *The Science and Technology of Growing Young*, industry investor and insider Sergey Young demystifies the longevity landscape, cutting through the hype and showing readers what they can do now to live better for longer, and offering a look into the exciting possibilities that await us. By viewing aging as a condition that can be cured, we can dramatically revolutionize the field of longevity and make it accessible for everyone. Join Sergey as he gathers insights from world-leading health entrepreneurs, scientists, doctors, and inventors, providing a comprehensive look into the future of longevity in two horizons: • The Near Horizon of Longevity identifies the technological developments that will allow us to live to 150—some of which are already in use—from AI-based diagnostics to gene editing and organ regeneration. • The Far Horizon of Longevity offers a tour of the future of age reversal, and the exciting technologies that will allow us to live healthily to 200, from Internet of Bodies to digital avatars to AI-brain integration. In a bonus chapter, Sergey also showcases 10 longevity choices that we already know and can easily implement to live to 100, distilling the science behind diet, exercise, sleep, mental health, and our environments into attainable habits and lifestyle hacks that anyone can adopt to vastly improve their lives and workplaces. Combining practical advice with an incredible overview of the brave new world to come, *The Science and Technology of Growing Young* redefines what it means to be human and to grow young.

Ageless Andrew Steele, 2020-12-24 'A stunner ... If you haven't got this book in your house, I don't know why' Chris Evans 'A startling wake-up call . . . Writing with the vim of a Bill Bryson and the technical knowledge of a scientist, Steele gives us a chance to grasp what's at stake' Independent 'An exhilarating journey . . . Steele is a superb guide' Telegraph 'A fascinating read with almost every page bursting with extraordinary facts . . . Read it now' Mail on Sunday *Ageless* is a guide to the biggest issue we all face. Ageing – not cancer, not heart disease – is the world's leading cause of death and suffering. What would the world be like if we could cure it? Living disease-free until the age of 100 is achievable within our lifetimes. In prose that is lucid and full of fascinating facts, *Ageless* introduces us to the cutting-edge research that is paving the way for this

revolution. Computational biologist Andrew Steele explains what occurs biologically as we age, as well as practical ways we can slow down the process. He reveals how understanding the scientific implications of ageing could lead to the greatest discovery in the history of civilisation – one that has the potential to improve billions of lives, save trillions of dollars, and transform the human condition.

The Longevity Paradox Dr. Steven R. Gundry, MD, 2019-03-19 From the author of the New York Times bestseller *The Plant Paradox* comes a groundbreaking plan for living a long, healthy, happy life. From the moment we are born, our cells begin to age. But aging does not have to mean decline. World-renowned surgeon Dr. Steven Gundry has been treating mature patients for most of his career. He knows that everyone thinks they want to live forever, until they hit middle age and witness the suffering of their parents and even their peers. So how do we solve the paradox of wanting to live to a ripe old age—but enjoy the benefits of youth? This groundbreaking book holds the answer. Working with thousands of patients, Dr. Gundry has discovered that the “diseases of aging” we most fear are not simply a function of age; rather, they are a byproduct of the way we have lived over the decades. In *The Longevity Paradox*, he maps out a new approach to aging well—one that is based on supporting the health of the “oldest” parts of us: the microorganisms that live within our bodies. Our gut bugs—the bacteria that make up the microbiome—largely determine our health over the years. From diseases like cancer and Alzheimer’s to common ailments like arthritis to our weight and the appearance of our skin, these bugs are in the driver’s seat, controlling our quality of life as we age. The good news is, it’s never too late to support these microbes and give them what they need to help them—and you—thrive. In *The Longevity Paradox*, Dr. Gundry outlines a nutrition and lifestyle plan to support gut health and live well for decades to come. A progressive take on the new science of aging, *The Longevity Paradox* offers an action plan to prevent and reverse disease as well as simple hacks to help anyone look and feel younger and more vital.

The Longevity Code Kris Verburgh, 2018-01-23 “Why do we grow old? . . . Verburgh tackles this age-old question . . . with practical suggestions for how to slow down our biological clock.” —David Ludwig, MD, PhD, #1 New York Times–bestselling author *Do you know exactly how and why you age? And what you can do—whatever your current age—to slow that process and have a longer, healthier life? In *The Longevity Code*, medical doctor Kris Verburgh illuminates the biological mechanisms that make our bodies susceptible to heart attacks, dementia, diabetes, and other aging-related diseases. With the facts laid out, he provides the tools we need to slow down the aging process. His scientifically backed Longevity Staircase outlines a simple yet innovative step-by-step method offering better health and a longer life span—especially the crucial role of proper nutrition and exercise. But diet and exercise might not be the only way to crack the “longevity code”: With each passing day, advances in biotechnology that were once the stuff of science fiction are emerging. Dr. Verburgh discusses how new types of*

vaccines, mitochondrial DNA, CRISPR proteins, and stem cells may help us slow and even reverse aging—now and in the future—and when paired with the right lifestyle, lead to longer, healthier lives than we’ve ever imagined. “Verburgh examines how we age and takes a valuable look at ethical issues surrounding the prevention of aging.” —Library Journal

The Telomere Effect Dr. Elizabeth; Epel Blackburn (Dr. Elissa), 2017 Groundbreaking book by the Nobel Prize Winner who discovered telomeres, telomerase, and their role in the aging process, and the psychologist who researched specific lifestyle habits to protect them and slow down disease and lengthen life. Have you wondered why some 60-year olds look and feel like 40-year-olds and why some 40-year-olds look and feel like 60-year-olds? While many factors contribute to aging and illness, Nobel Prize-winning Doctor Elizabeth Blackburn discovered biological markers, called telomerase, the enzyme that replenishes telomeres, which protect our DNA Dr. Blackburn discovered that the length and health of one's telomeres provides a biological basis for the long hypothesized mind-body connection. But perhaps more importantly, along with leading health Psychologist, Dr. Elissa Epel, discovered that there are things we can do to improve and lengthen our telomeres to keep us vital and disease-free. This book will help people increase the reader's lifespan and health-span (the number of years during this time that they remain healthy and active), including information on how sleep, exercise, and diet profoundly affect our telomeres, and how chronic stress can eat away at our telomeres. Included are lists of which foods are healthy for our telomeres; how aging begins in utero: mothers who are highly stressed during pregnancy have children with shorter telomeres, and how thinking you are young and vital helps keep you that way!
