The Social Metabolism Manuel González de Molina, Víctor M. Toledo, 2014-06-30 Over this last decade, the concept of Social Metabolism has gained prestige as a theoretical instrument for the required analysis, to such an extent that there are now dozens of researchers, hundreds of articles and several books that have adopted and use this concept. However, there is a great deal of variety in terms of definitions and interpretations, as well as different methodologies around this concept, which prevents the consolidation of a unified field of new knowledge. The fundamental aim of the book is to conduct a review of the past and present usage of the concept of social metabolism, its origins and history, as well as the main currents or schools that exist around this concept. At the same time, the reviews and discussions included are used by the authors as starting points to draw conclusions and propose a theory of socio-ecological transformations. The theoretical and methodological innovations of this book include a distinction of two types of metabolic processes: tangible and intangible; the analysis of the social metabolism at different scales (in space and time) and a theory of socio-ecological change overcoming the merely “systemic” or “cybernetic” nature of conventional approaches, giving special protagonism to collective action.

Metabolism of Human Diseases Eckhard Lammert, Martin Zeeb, 2014-06-24 “Metabolism of Human Diseases” examines the physiology of key organs (e.g. brain, eye, lung, heart, blood vessels, blood, immune system, gastrointestinal tract, pancreas, liver, fat tissue, kidney, reproductive system, teeth, bone and joints) and how defective metabolism and signaling pathways within these organs contribute to common human diseases. The latter include depression, schizophrenia, epilepsy, Parkinson's disease, Alzheimer's disease, migraine, multiple sclerosis, Down syndrome, macular degeneration, glaucoma, asthma, COPD, pneumonia, atherosclerotic heart disease, heart failure, stroke, varicose veins, Sickle cell disease, hyperlipidemia, fever, sepsis, allergies, peptic ulcer, gastroenteritis, lactose intolerance, colon cancer, diabetes, cirrhosis, metabolic syndrome, hypertension, chronic kidney disease, gout, urinary tract infections, kidney stones, dental caries, osteoporosis, osteoarthritis, rheumatoid arthritis, breast cancer and prostate cancer. The book also describes commonly used drugs and explains their molecular targets. It provides the first comprehensive and detailed summary of the metabolism of individual organs and their physiological and pathological functioning. Thus it serves as a useful supplement to previous textbooks of human physiology. “Metabolism of Human Diseases” is a must-have, state-of-the-art textbook written by International experts for graduate students, postdocs and scientists in metabolic research, biochemistry, physiology and

pharmacy as well as for physicians interested in molecular mechanisms underlying common human diseases.

Metabolic Engineering of Plant Secondary Metabolism R. Verpoorte, A. Wilhelm Alfermann, 2013-03-09 Plant secondary metabolism is an economically important source of fine chemicals, such as drugs, insecticides, dyes, flavours, and fragrances. Moreover, important traits of plants such as taste, flavour, smell, colour, or resistance against pests and diseases are also related to secondary metabolites. The genetic modification of plants is feasible nowadays. What does the possibility of engineering plant secondary metabolite pathways mean? In this book, firstly a general introduction is given on plant secondary metabolism, followed by an overview of the possible approaches that could be used to alter secondary metabolite pathways. In a series of chapters from various authorities in the field, an overview is given of the state of the art for important groups of secondary metabolites. No books have been published on this topic so far. This book will thus be a unique source of information for all those involved with plants as chemical factories of fine chemicals and those involved with the quality of food and ornamental plants. It will be useful in teaching graduate courses in the field of metabolic engineering in plants.

Metabolic Ecology Richard M. Sibly, James H. Brown, Astrid Kodric-Brown, 2012-04-30 One of the first textbooks in this emerging important field of ecology. Most of ecology is about metabolism: the ways that organisms use energy and materials. The energy requirements of individuals - their metabolic rates - vary predictably with their body size and temperature. Ecological interactions are exchanges of energy and materials between organisms and their environments. So metabolic rate affects ecological processes at all levels: individuals, populations, communities and ecosystems. Each chapter focuses on a different process, level of organization, or kind of organism. It lays a conceptual foundation and presents empirical examples. Together, the chapters provide an integrated framework that holds the promise for a unified theory of ecology. The book is intended to be accessible to upper-level undergraduate, and graduate students, but also of interest to senior scientists. Its easy-to-read chapters and clear illustrations can be used in lecture and seminar courses. Together they make for an authoritative treatment that will inspire future generations to study metabolic ecology.

The Power of Your Metabolism Frank Suárez, 2009-07 This book provides information on slow metabolism, weight problems, obesity, diabetes, hypothyroidism.

The Metabolism of Tumours Otto Warburg, 2015-09-15 This is the original text of Nobel Prize Laureate Dr. Otto Warburg's classic, *The Metabolism of Tumours*. In this book Dr. Warburg, MD, PhD, and distinguished scientists demonstrate, through empirical evidence that: "Cancer, above all other diseases, has countless secondary causes. But, even for cancer, there is only one prime cause. Summarized in a few words, the prime cause of cancer is the replacement of the respiration of oxygen in normal body cells by fermentation of sugar." All the experiments, in their original text, are included in this book.

Bacterial Metabolism Gerhard Gottschalk,2012-12-06 This concise yet comprehensive text surveys the field of bacterial metabolism in terms useful to students and researchers. Emphasis is on those metabolic reactions occurring only in bacteria. Thus, the book describes in detail the energy metabolism of the various groups of bacteria. In addition, it examines pathways used by bacteria for the degradation of organic compounds, the synthesis of cellular constituents, the regulation of bacterial metabolism and the fixation of molecular nitrogen.

Primer on the Metabolic Bone Diseases and Disorders of Mineral Metabolism Juliet E. Compston, Jane B. Lian, 2009-12-22

Thyroid Hormone Metabolism Georg Hennemann, 1986

The Heterogeneity of Cancer Metabolism Anne Le, 2018-06-26 Genetic alterations in cancer, in addition to being the fundamental drivers of tumorigenesis, can give rise to a variety of metabolic adaptations that allow cancer cells to survive and proliferate in diverse tumor microenvironments. This metabolic flexibility is different from normal cellular metabolic processes and leads to heterogeneity in cancer metabolism within the same cancer type or even within the same tumor. In this book, we delve into the complexity and diversity of cancer metabolism, and highlight how understanding the heterogeneity of cancer metabolism is fundamental to the development of effective metabolism-based therapeutic strategies. Deciphering how cancer cells utilize various nutrient resources will enable clinicians and researchers to pair specific chemotherapeutic agents with patients who are most likely to respond with positive outcomes, allowing for more cost-effective and personalized cancer therapeutic strategies.

Biochemistry of Metabolism David D. Davies, 2014-05-10 The Biochemistry of Plants: A Comprehensive Treatise, Volume 11: Biochemistry of Metabolism provides information pertinent to the chemical and biochemical aspects of metabolism. This

book discusses the control mechanisms of metabolism. Organized into nine chapters, this volume begins with an overview of the history of biochemistry and discusses the developments in the kinetics of regulatory enzymes. This text then examines a theory that explains how subunit interactions modulate the rate of conversion of a substrate into a product. Other chapters consider some relation between cell-wall elongation and cell-wall charge density and explore the subcellular localization of the enzymes of glycolysis. This book discusses as well the regulation of glycolysis and the pentose phosphate pathway. The final chapter deals with the pathways of C1 metabolism that are of prime importance, as the synthesis of several cellular constituents depends directly or indirectly on folate metabolism. This book is a valuable resource for plant biochemists, neurobiochemists, molecular biologists, senior graduate students, and research workers.
