Implementing Quality Measures for Accountability in Community-Based Care for People with Serious Illness
National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Board on Health Care Services, Roundtable on Quality Care for People with Serious Illness, 2018-12-11 Millions of Americans of all ages face the challenge of living with serious illnesses such as advanced cancer, heart, or lung disease. Many people with serious illness are increasingly cared for in community settings. While the number of community-based programs to provide care for those with serious illness has grown significantly, the quality of care provided is not consistent across geographic locations or care settings. Care for the serious illness population often features gaps in coordination across sites of care and poor patient and family perceptions as to the quality of care provided. In an effort to better understand and facilitate discussions about the challenges and opportunities related to identifying and implementing quality

measures for accountability purposes in community-based serious illness care, the National Academies of Sciences, Engineering, and Medicine held a public workshop on April 17, 2018, in Washington, DC. Workshop participants explored the current state of quality measurement for people with serious illness, their families, and caregivers, with the aim of identifying next steps toward effectively implementing measures to drive improvement in the quality of community-based care for those facing serious illness. This publication summarizes the presentations and discussions from the workshop.

Developmental Neuropathology Reinhard L. Friede,2012-12-06 I was gratified by the most favorable reception and wide usage received by the first edition of this book. A decade seems to be a short period for a book on pathology, and yet it witnessed many important changes of concepts, along with a formidable growth of knowledge. The second edition required extensive reorganization. There are new chapters on mitochondriopathies, on peroxisomal diseases and on spongy myelino

pathies. Major revisions and new additions were necessary in many chapters, for instance those on the dysplasias of the cerebral and of the cerebellar hemispheres, which were largely reorganized. The chapters on perinatal pathology were reordered and reorganized to give a more logical sequence of prenatal, perinatal and postnatal lesions. The entire text was worked over for brevity. A wealth of new references was added with the aim of staying abreast with the literature up to summer 1988. All refer ences were double checked for errors. My gratitude goes to Mrs. Gisela Ropte and Mrs. Cynthia Bunker for their untiring, diligent help. As a result, this second edition is an essentially rewritten text. Advance in the prevention of human suffering is based on a thorough understand ing of the nature of disease. I hope that this text will continue to be of service in this behalf. Perhaps it may also reflect and foster the intellectual curiosity which makes the reading of brains so interesting an occupation. Gottingen, 1989 Reinhard L.
