Problemas resueltos de química. La ciencia básica DOMINGUEZ REBOIRAS, MIGUEL ANGEL, 2007-01-01 El objetivo de esta obra es ayudar al estudiante a desarrollar su propio método de trabajo en el aprendizaje de la resolución de los problemas con los que se enfrenta en las clases, seminarios y exámenes; por esa razón, todos los problemas propuestos se resuelven de forma pormenorizada. Abarcan un amplio temario cubriendo de este modo los programas de cursos de Química General convencionales. Los problemas están tomados en su totalidad de los que aparecen propuestos al final de cada capítulo del libro Química. La ciencia básica; convirtiéndose así la presente obra en complementaria de ésta última.

ELEMENTOS DE QUÍMICA BÁSICA Ángel Fortunato Bernal Álava, Lucy Maritza García Lucas, Julio Dagoberto Cevallos Villamar, Mercedes del Rosario Acuña Acebo, Tayron Omar Manrique Toala, Tania Maricela Macías Parrales, 2018-11-30 Por medio de este libro usted obtendrá conocimientos acerca de una serie de elementos químicos, que por medio de la química y la utilización de fórmulas podremos llegar a determinar su comportamiento al estar solo y también al estar conjunto con otro elemento. El estudio de estos elementos implica analizar profundamente su historia, aplicaciones, utilización, comportamiento y compuestos que se puedan obtener con el estudio de ellos, para poder hacer lo antes mencionado tenemos que tener conocimientos básicos e intermedios de química.

PRINCIPALES COMPUESTOS QUÍMICOS CLARAMUNT VALLESPÍ Rosa M^a, CORNAGO RAMÍREZ Pilar, ESTEBAN SANTOS Soledad, FARRÁN MORALES Angeles, PÉREZ TORRALBA Marta, SANZ DEL CASTILLO Dionisia, 2015-07-07 La asignatura Principales Compuestos Químicos se incluye dentro del módulo de Formación Básica del Grado en Química. El objetivo general de dicha asignatura es proporcionar un conocimiento básico, por una parte, de la reactividad y propiedades de los compuestos orgánicos y biomoléculas y, por otra, de la química de los elementos de los grupos de la Tabla Periódica y compuestos más importantes a los que dan lugar, así como de las reacciones propias de las sustancias radiactivas. También en formato e-book.

Química Y Cultura Científica Soledad ESTEBAN SANTOS, 2010-10-25 La lectura de este texto no se limita tan sólo al

profesorado, sino a un público más amplio. Tomando la química como eje central, se han seleccionado una serie de temas de carácter multidisciplinar contemplando las conexiones entre los contenidos científicos con fenómenos sociales y medioambientales, desde artículos y objetos cotidianos (tintes, joyas) como aspectos trascendentales para nuestras vidas (medicamentos, agricultura o problemas medioambientales).

Chemical Education: Towards Research-based Practice J.K. Gilbert,Onno de Jong,Rosária Justi,David F. Treagust,Jan H. van Driel,2003-01-31 Chemical education is essential to everybody because it deals with ideas that play major roles in personal, social, and economic decisions. This book is based on three principles: that all aspects of chemical education should be associated with research; that the development of opportunities for chemical education should be both a continuous process and be linked to research; and that the professional development of all those associated with chemical education should make extensive and diverse use of that research. It is intended for: pre-service and practising chemistry teachers and lecturers; chemistry teacher educators; chemical education researchers; the designers and managers of formal chemical curricula; informal chemical educators; authors of textbooks and curriculum support materials; practising chemists and chemical technologists. It addresses: the relation between chemistry and chemical education; curricula for chemical education; teaching and learning about chemical compounds and chemical change; the development of teachers; the development of chemical education as a field of enquiry. This is mainly done in respect of the full range of formal education contexts (schools, universities, vocational colleges) but also in respect of informal education contexts (books, science centres and museums).

Ellis,1993 This resource volume, written especially for teachers of introductory chemistry courses, is in a ready-to-use format that will enable instructors to integrate materials chemistry into their curriculum. The Cultural Legacy of María Zambrano Xon De Ros,Daniela Omlor,2018-09-28 The philosopher María Zambrano (1904-1991) is one of the foremost Spanish intellectuals of the twentieth century. A disciple of Ortega y Gasset, she taught at the University of Madrid in the 1930s and joined the Republican diaspora in exile, living in México, Cuba, Puerto Rico, Paris, Rome and Geneva till her return to Spain in 1984. A heterodox philosopher who conceived her role as that of an agent for

ethical change, she sought to reconcile philosophy and poetry, and wrote not only essays on philosophy, but also plays, poetry, literary and art reviews, and a memoir. After the relative obscurity of her life in exile, her genius began to be recognized in the decade before her death, but she remains little known outside the Spanish-speaking world. These essays explore her legacy, offering new critical insights which draw on literature, aesthetics, gender studies, psychoanalysis, political theory and the visual arts. The editors teach modern Spanish literature at the University of Oxford, where Xon de Ros is a Tutorial Fellow at Lady Margaret Hall and Somerville College, and Daniela Omlor is a Tutorial Fellow at Lincoln College and a Lecturer at Jesus College.

Free Radical Toxicology Kendall B Wallace, 1997-06-19 Provides insight into the involvement of free radicals in the pathogenesis of chemical-induced toxic tissue injury. The text addresses the fundamentals of free radical chemistry and the theoretical basis for electron transfer reaction leading to free radical generation. It describes the various subcellular sources of free radicals, the biological reactivity with lipid, protein and nucleic acids, and the physiochemical determinants of free radical-induced cell injury and the various antioxidant defence systems. The book focuses on target organ toxicity, and the concluding section offers an overview of the evidence implicating free radicals in the aetiology of various chemical toxicities, challenging the possibility of misguided use of biomarkers for oxidative damage.

General Chemistry Jean B. Umland, For students to learn to think scientifically, they need something to think about. Authors Jean B. Umland and Jon M. Bellama accomplish this by integrating descriptive chemistry and theory throughout the book. From the very first chapter, the authors familiarize students with chemical reactions - which Umland and Bellama believe are the heart of chemistry. But the authors go beyond describing what happens during a reaction to explaining WHY chemical reactions occur. This allows the first lectures to include the interesting demonstrations that capture student interest and keep them captivated throughout the course. It's this approach that helps involve students in a fascinating discovery process that lets them experience the Aha! feeling, and makes them eager to learn more about the chemical processes taking place around them.
