CRASH! Randy Malamud,2024-12-12 CRASH! explores the fascinating, revealing, and surprising cultural impact of plane crashes across art, literature, music, media, and creative nonfiction. Plane crashes are covered extensively but they are not analyzed very deeply, beyond rote media reports and forensic accident investigations. This is despite the voluminous, diverse, and fascinating cultural materials - poems and novels, songs, films, art, TV series, and on and on - that emerge in the wake of

aviation disasters. Randy Malamud reanimates these tragic events and identifies how they persist and resonate through our culture-more than we might have imagined, and in intricately far-reaching ways. A unique and extraordinarily wide-ranging cultural examination, CRASH! takes the reader on a journey that includes reflections on flight phobia, themes of crash survival (with asides on Lord of the Flies, The Little Prince, and Ernest Hemingway's two-day two-crash adventure), the existentialism of pilots' last words, the day the music died, deep dives into modernist plane wreck paintings, kamikaze pilots and their Zen death poems, plane crashes before planes, 'race, crash, and gender,' and the cultural aftermath of 9/11. Ultimately, Malamud shows that crashes do not bring about complete and total destruction: we accomplish some degree of restoration by shoring fragments against the ruins. The plane is dead; long live the plane.

Global Human Trafficking Molly Dragiewicz,2014-12-05 Human trafficking has moved from relative obscurity to a major area of research, policy and teaching over the past ten years. Research has sprung from criminology, public policy, women's and gender studies, sociology, anthropology, and law, but has been somewhat hindered by the failure of scholars to engage beyond their own disciplines and favoured methodologies. Recent research has begun to improve efforts to understand the causes of the problem, the experiences of victims, policy efforts, and their consequences in specific cultural and historical contexts. Global Human Trafficking: Critical issues and contexts foregrounds recent empirical work on human trafficking from an interdisciplinary, critical perspective. The collection includes classroom-friendly features, such as introductory chapters that provide essential background for understanding the trafficking literature, textboxes explaining key concepts, discussion questions for each chapter, and lists of additional resources, including films, websites, and additional readings for each chapter. The authors include both eminent and emerging scholars from around the world, drawn from law, anthropology, criminology, sociology, cultural studies, and political science and the book will be useful for undergraduate and graduate courses in these areas, as well as for scholars interested in trafficking.

It is thorough and precise enough for professional economists yet readily accessible to business people and investors. Teaching History with Museums Alan S. Marcus,Jeremy D. Stoddard,Walter W. Woodward,2012-04-23 Teaching History with Museums provides an introduction and overview of the rich pedagogical power of museums. In this comprehensive textbook, the authors show how museums offer a sophisticated understanding of the past and develop habits of mind in ways that are not easily duplicated in the classroom. Using engaging cases to illustrate accomplished history teaching through museum visits, this text provides pre- and in-service teachers, teacher educators, and museum educators with ideas for successful visits to artifact and display-based museums, historic forts, living history museums, memorials, monuments, and other heritage sites. Each case is constructed to be adapted and tailored in ways that will be applicable to any classroom and encourage students to think deeply about museums as historical accounts and interpretations to be

examined, questioned, and discussed.

Understanding the Korean War Arthur H. Mitchell, 2013-08-07 This is a study of the Korean War of 1950-1953 from the inside--the nuts and bolts of armed conflict. The perspective is American, with the principal focus on the relationships of the people involved: North and South Koreans, the Chinese and Soviets, and how the U.S. and its allies engaged with them all. The lives of ordinary soldiers are examined--U.S. forces, with attention paid to the other side as well. The book examines such important aspects of military operations as supplies, equipment and weapons, tactics and strategy, intelligence, and psychological warfare, as well as the effective elimination of racial segregation in the U.S. military. Also studied is the vexing matter of prisoners of war, on both sides. Finally, there is an effort to fit Korea into the generalities of American military experience in Asia, from the war with Japan to Vietnam.

From Pink to Green Barbara L. Ley, 2009-06-29 From the early 1980s, the U.S. environmental breast cancer movement has championed the goal of eradicating the disease by emphasizing the importance of reducing—even eliminating exposure to chemicals and toxins. From Pink to Green chronicles the movement's disease prevention philosophy from the beginning. Challenging the broader cultural milieu of pink ribbon symbolism and breast cancer awareness campaigns, this movement has grown from a handful of community-based organizations into a national entity, shaping the cultural, political, and public health landscape. Much of the activists' everyday work revolves around describing how the so called cancer industry downplays possible environmental links to protect their political and economic interests and they demand that the public play a role in scientific, policy, and public health decision-making to build a new framework of breast cancer prevention. From Pink to Green successfully explores the intersection between breast cancer activism and the environmental health sciences, incorporating public and scientific debates as well as policy implications to public health and environmental agendas.

The Neoliberal Pattern of Domination José Manuel Sánchez Bermúdez, 2012-06-21 At its current state of historical

development, capital finds its internal contradictions tending towards an irresolvable character as manifested in multiple crises. Embodied in a fistful of gigantic transnational companies whose representatives seek consolidation as a global oligarchy, capital continues to concentrate its economic, political and military power as it produces a growing mass of redundant human beings, promotes conflicts that result in misery, chaos, social degradation and death, and destroys entire societies while razing the natural environment, thereby putting humanity itself at risk. The defense of life and the construction of renewed hope for a future require opposition to the domination of capital. This book seeks to contribute to that effort by setting out an analysis of the mechanisms in which capital is based.

Gaining Insight into User and Search Engine Behaviour by Analyzing Web Logs Jeeva Jose,P. Sojan

Lal,2016-10-04 Web Usage Mining, also known as Web Log Mining, is the result of user interaction with a Web server including Web logs, click streams and database transaction or the visits of search engine crawlers at a Website. Log files provide immense source of information about the behavior of users as well as search engine crawlers. Web Usage Mining concerns usage of common browsing patterns i.e. pages requested in sequence from Web logs. These patterns can be utilized to enhance the design and modification of a Website. Analyzing and discovering user behavior is helpful for understanding what online information users inquire and how they behave. The analyzed result can be used in intelligent online applications, refining Websites, improving search accuracy when seeking information and lead decision makers towards better decisions in changing markets like putting advertisements in ideal places. Similarly, the crawlers or spiders are accessing the Websites to index new and updated pages. These traces help to analyze the behavior of search engine crawlers. The log files are unstructured files and of huge size. These files need to be extracted and pre-processed before any data mining functionality to follow. Pre-processing is done in unique ways for each application. Two pre-processing algorithms are proposed based on indiscernibility relations in rough set theory which generates Equivalence Classes. The first algorithm generates a pre-processed file with successful user requests while the second one generates a pre-processed file for pre-fetching and caching purposes. Two algorithms are proposed to extract usage analytics. The first algorithm identifies the origin of visits, the top referring sites and the most popular keywords used by the visitor to arrive at a Website. The second algorithm extracts user agents like browser with its version and operating system with its version used by a visitor to access a Website. In this study, clustering of users based on Entry Pages to a Website is done to analyze the deep linked traffic at a Website. The Top Ten Entry Pages, the traffic and the temporal information of the Top Ten Entry Pages are also studied.
