The Saturn System Through The Eyes Of Cassini Nasa,2018-03-22 The Saturn System Through The Eyes Of Cassini is printed in full-color on 70-pound paper. The Cassini-Huygens mission has revolutionized our knowledge of the Saturn system and revealed surprising places in the solar system where life could potentially gain a foothold--bodies we call ocean worlds. Since its arrival in 2004, Cassini-Huygens has been nothing short of a discovery machine, captivating us with data and images never before obtained with such detail and clarity. Cassini taught us that Saturn is a far cry from a tranquil lone planet with delicate rings. Now, we know more about Saturn's chaotic, active, and powerful rings, and the storms that rage beneath. Images and data from Saturn's moons Titan and Enceladus hint at the possibility of life never before suspected. The rings of Saturn, its moons, and the planet itself offer irresistible and inexhaustible subjects for intense study. As the Cassini mission comes to a dramatic end with a fateful plunge into Saturn on Sept. 15, 2017, scientists are already dreaming of going back for further study.

Saturn from Cassini-Huygens Michele Dougherty, Larry Esposito, Stamatios Krimigis, 2009-09-30 This book is one of two volumes meant to capture, to the extent practical, the scientific legacy of the Cassini-Huygens prime mission, a landmark in the history of planetary exploration. As the most ambitious and interdisciplinary planetary exploration mission to date, it has extended our knowledge of the Saturn system to levels of detail at least an order of magnitude beyond that gained from all previous missions to Saturn. Nestled in the brilliant light of the new and deep understanding of the Saturn planetary system is the shiny nugget that is the spectacularly successful collaboration of individuals, organizations and governments in the achievement of Cassini-Huygens. In some ways the partnerships formed and lessons learned may be the most enduring legacy of Cassini-Huygens. The broad, international coalition that is Cassini-Huygens is now conducting the Cassini Equinox Mission and planning the Cassini Solstice Mission, and in a major expansion of those fruitful efforts, has extended the collaboration to the study of new flagship missions to both Jupiter and Saturn. Such ventures have and will continue to enrich us all, and evoke a very optimistic vision of the future of international collaboration in planetary exploration. The two volumes in the series Saturn from Cassini-Huygens and Titan from Cassini-Huygens are the direct products of the efforts of over 200 authors and co-authors. Though each book has a different set of three editors, the group of six editors for the two volumes has worked together through every step of the process to ensure that these two volumes are a set.

The Vital Vastness Richard Michael Pasichnyk,2002-02-01 Here are some of the topics that are presented in *The Vital Vastness - Volume Two: The Living Cosmos*. The planets, though at first appear quite different, are actually very similar when noting a myriad of phenomena. All display a Field-dynamical structure similar to the Field-dynamical Earth Model (FEM) presented in Volume One. Star and planet formation, galaxies, galactic clusters and super clusters, and even, the large-scale structure of the Universe are also structurally similar with comparable phenomena. Some craters, and tektites, are the result of explosive ejection, not impact. The Tunguska event was one such event here on Earth. Unusual meteorites and animal falls are also the result of ejection. Our sun (as well as other stars) also displays the Field-dynamical structure of the other celestial objects. The planets, especially the Earth, do affect solar activity, but it is the result of an electromagnetic coupling, not the often suggested and discarded gravitational scenarios. The Sun, Moon and Earth are a single unit, as noted in a myriad of phenomena. Much, much more is also uncovered in this volume. Throughout both volumes the conclusions are clear, life has dominion over the Cosmos, and we need a new mind-set in our understanding and exploration of it. The most important direction for humanity is to understand that the care and nurturing - love - of life is of the utmost importance if we want a world filled with peace and plenty. The last book in the series, *In Defense of Nature - The History Nobody Told You About*, reveals the prehistory and history of human interaction with the Living Earth and Cosmos, disclosing the unrest and destabilization when we do not know of life's paramount importance.
