GIS and Crime Mapping Spencer Chainey, Jerry Ratcliffe, 2013-04-26 The growing potential of GIS for supporting policing and crime reduction is now being recognised by a broader community. GIS can be employed at different levels to support operational policing, tactical crime mapping, detection, and wider-ranging strategic analyses. With the use of GIS for crime mapping increasing, this book provides a definitive reference. GIS and Crime Mapping provides essential information and reference material to support readers in developing and implementing crime mapping. Relevant case studies help demonstrate the key principles, concepts and applications of crime mapping. This book combines the topics of theoretical principles, GIS, analytical techniques, data processing solutions, information sharing, problem-solving approaches, map design, and organisational structures for using crime mapping for policing and crime reduction. Delivered in an accessible style, topics are covered in a manner that underpins crime mapping use in the three broad areas of operations, tactics and strategy. Provides a complete start-to-finish coverage of crime mapping, including theory, scientific methodologies, analysis techniques and design principles. Includes a comprehensive presentation of crime mapping applications for operational, tactical and strategic purposes. Includes global case studies and examples to demonstrate good practice. Co-authored by Spencer Chainey, a leading researcher and consultant on GIS and crime mapping, and Jerry Ratcliffe, a renowned professor and former police officer. This book is essential reading for crime analysts and other professionals working in intelligence roles in law enforcement or crime reduction, at the local, regional and national government levels. It is also an excellent reference for undergraduate and Masters students taking courses in GIS, Geomatics, Crime Mapping, Crime Science, Criminal Justice and Criminology.

Holding Our Ground Deborah Bowers, Tom Daniels, 1997-03-01 Farmers, who own or rent most of the private land in America, hold the key not only to the nation's food supply, but also to managing community growth, maintaining an attractive landscape, and protecting water and wildlife resources. While the issue of protecting farmland and open space is not new, the intensity of the challenge has increased. Farmers are harder pressed to make a living, and rural and suburban communities are struggling to accommodate increasing populations and the development that comes with them. Holding Our

Ground can help landowners and communities devise and implement effective strategies for protecting farmland. The book: discusses the reasons for protecting farmland and how to make those reasons widely known and understood describes the business of farming, federal government farm programs, and the role of land in farmers's decisions analyzes federal, state, and local farmland protection efforts and techniques explores a variety of land protection options including purchase of development rights; transfer of development rights; private land trusts; and financial, tax, and estate planning reviews the strengths and weaknesses of the farmland protection tools available The authors describe the many challenges involved in protecting farmland and explain how to create a package of techniques that can meet those challenges. In addition, they offer appendixes with model zoning ordinances, nuisance disclaimers, conservation easements, and other documents that individuals and communities need to carry out the programs discussed. Holding Our Ground provides citizens, elected officials, planners, and landowners with a solid basis for understanding the issues behind farmland protection, and will be an invaluable resource in developing techniques and programs for achieving long-term protection goals.

**Synthesized population databases** Mark C. Bruhn,Breda Munoz,James Cajka,Gary Smith,Ross J. Curry,Diane K. Wagener,William D. Wheaton,2012-01-25 Because they can spread to humans, infections and diseases in poultry and other livestock populations are of keen interest to public health officials. Officials need to plan for a rapid response, and to do so, they need information about where farms are located and how they cluster spatially. No public domain, nationwide database currently exists for actual farm locations. RTI researchers in coordination with University of Pennsylvania infectious disease modelers developed a new way to create a synthetic dataset that replicates the spatial distribution of poultry farms and the type and number of birds raised on them. The RTI method produced a more realistic dataset than the currently used random

placement alternative. The results suggest the RTI method could be used to simulate other livestock farms of interest to infectious disease researchers.
