Superior Beings BRAMS, 2013-11-11 The central question I pose in this book is: If there existed a superior being who possessed the supernatural qualities of omniscience, omnipotence, immortality, and incomprehensibility, how would he/she act differently from us, and would these differences be knowable? (Because God, the superior being in the Judeo Christian tradition, is generally described as a male, I shall henceforth use the masculine pronoun form for convenience, but I intend no invidious gender distinctions, whether applied to supernatural or natural beings.) Theologians, philosophers of religion, and erudite scholars in other disciplines have addressed this and related questions before, but their answers, generally speaking, have not been informed by any systematic or rigorous theory. I believe the mathematical theory of games, which has little to do with the frivolity and playfulness we normally associate with games, provides a powerful tool for clarifying the key theological concepts in my central question and drawing out their implications in games played between human and superior beings. I am fully aware that not everybody will agree that omniscience, omnipotence, immortality, and incomprehensibility are what I say they are, but I invite them to propose their own definitions and derive their own conclusions with the aid of the theory. By endowing these protean concepts with unambiguous meanings, I will try to show how game theory can breathe life into questions that have been dismissed too quickly simply because they are metaphysical-outside the world of experience.

**Sb Organoantimony Compounds** Marlies Mirbach, Markus Wieber, 2013-11-11 This fifth volume on organoantimony compounds continues the description of pentavalent antimony compounds and concludes the entire series. The treatment of pentavalent compounds with three Sb-C bonds began in Part 4 with the RSbX type and is now completed with types RSb(X)Y, RR'SbX, RR'Sb(X)Y,  $\text{R}_3\text{SbX}$ ,  $\text{R}_2\text{SbX}_2$ ,  $\text{RR}'\text{RSbX}$  (Section 2.5.1) and the corresponding bi- and trinuclear compounds (Sections 2.5.2, p.87, and 2.5.3, p. 132). R, R', and R denote different organic groups bonded through carbon to the antimony atom. X and Y represent inorganic or organic groups that are bonded to antimony by an atom other than carbon. R, X, and/or Y can also be chelating ligands. The remaining part of the volume completely covers all pentavalent antimony compounds

containing two Sb-C bonds (RSbX, RSb(X)Y, RR'SbX, RR'Sb(X)Y, bi- and tetranuclear 2 3 2 2 3 2 compounds, Chapter 2.6, p. 134) and those containing one Sb-C bond (RSbX, RSb(X)Y, 4 3 RSb(X)Y, bi- and trinuclear compounds, Chapter 2.7, p. 237). These compounds form adducts with Lewis bases (symbol D) and form many ionic complexes by the addition of salts such as amine hydrochlorides (symbol MZ). The adducts and ionic complexes are described immediately after the parent substances. The volume concludes with an Empirical Formula Index (p. 318) and a Ligand Formula Index (p. 357).
