What's In, What's Out Amanda Glassman, Ursula Giedion, Peter C. Smith, 2017-10-10 Vaccinate children against deadly pneumococcal disease, or pay for cardiac patients to undergo lifesaving surgery? Cover the costs of dialysis for kidney patients, or channel the money toward preventing the conditions that lead to renal failure in the first place? Policymakers dealing with the realities of limited health care budgets face tough decisions like these regularly. And for many individuals, their personal health care choices are equally stark: paying for medical treatment could push them into poverty. Many low- and middle-income countries now aspire to universal health coverage, where governments ensure that all people have access to the quality health services they need without risk of impoverishment. But for universal health coverage to become reality, the health services offered must be consistent with the funds available—and this implies tough everyday choices for policymakers that could be the difference between life and death for those affected by any given condition or disease. The situation is particularly acute in low- and middle income countries where public spending on health is on the rise but still extremely low, and where demand for expanded services is growing rapidly. *What's In, What's Out: Designing Benefits for Universal Health Coverage* argues that the creation of an explicit health benefits plan—a defined list of services that are and are not available—is an essential element in creating a sustainable system of universal health coverage. With contributions from leading health economists and policy experts, the book considers the many dimensions of governance, institutions, methods, political economy, and ethics that are needed to decide what's in and what's out in a way that is fair, evidence-based, and sustainable over time.

**Live Long and Prosper** World Bank, 2015-12-10 Aging is a challenge which countries in East Asia and Pacific (EAP) regions are grappling with or will soon confront. It raises many questions for policymakers ranging from potential macroeconomic impacts, to fiscal challenges of supporting pension, health and long-term care systems, and labor market implications as countries seek to promote productive aging. The urgency of the aging challenge varies across the region, but it will confront all EAP countries in time and early preparation is essential to avoid the missteps of other regions. Live Long and Prosper discusses the societal and public policy challenges and reform options for EAP countries as they address aging. It aims to strike a balance between aging optimists and pessimists. On the one hand, the impacts of aging on growth, labor markets and public spending are not the unavoidable catastrophe often feared. However, minimizing the downside risks of

aging and ensuring healthy and productive aging will require proactive public policy, political leadership, and new mindsets across society. The report reviews the evidence on demographic transition in EAP and its potential macroeconomic impact. It addresses the current policy environment including pensions and social security, health, and long-term care and labor markets to assess the risks of 'business as usual'. It also suggests policy directions to promote healthy and productive aging in EAP, and emphasizes that aging is not just about older people, but requires policy and behavioral change across the life cycle.

**The Future of Nursing 2020-2030** Mary K. Wakefield, David Rudyard Williams, Suzanne Le Menestrel, Jennifer Lalitha Flaubert, 2021 The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. *The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity* explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by *The Future of Nursing: Leading Change, Advancing Health* (2011) report. --

**Narrative Justice** Rafe McGregor, 2018-09-16 This book introduces narrative justice, a new theory of aesthetic education - the thesis that the cultivation of aesthetic or artistic sensibility can both improve moral character and achieve political

justice. The author argues that there is a subcategory of narrative representations that provide moral knowledge regardless of their categorisation as fiction or non-fiction, and which therefore can be employed as a means of moral improvement. McGregor applies this narrative ethics to the criminology of inhumanity, including both crimes against humanity and terrorism. Expanding on the methodology of narrative criminology, he demonstrates that narrative representations can be employed to evaluate responsibility for inhumanity, to understand the psychology of inhumanity, and to undermine inhumanity – and are thus a means to the end of opposing injustice. He concludes that the cultivation of narrative sensibility is an important tool for both moral improvement and political justice.
