Machine Learning in Finance Matthew F. Dixon, Igor Halperin, Paul Bilokon, 2020-07-01 This book introduces machine learning methods in finance. It presents a unified treatment of machine learning and various statistical and computational disciplines in quantitative finance, such as financial econometrics and discrete time stochastic control, with an emphasis on how theory and hypothesis tests inform the choice of algorithm for financial data modeling and decision making. With the trend towards increasing computational resources and larger datasets, machine learning has grown into an important skillset for the finance industry. This book is written for advanced graduate students and academics in financial econometrics, mathematical finance and applied statistics, in addition to quants and data scientists in the field of quantitative finance. *Machine Learning in Finance: From Theory to Practice* is divided into three parts, each part covering theory and

applications. The first presents supervised learning for cross-sectional data from both a Bayesian and frequentist perspective. The more advanced material places a firm emphasis on neural networks, including deep learning, as well as Gaussian processes, with examples in investment management and derivative modeling. The second part presents supervised learning for time series data, arguably the most common data type used in finance with examples in trading, stochastic volatility and fixed income modeling. Finally, the third part presents reinforcement learning and its applications in trading, investment and wealth management. Python code examples are provided to support the readers' understanding of the methodologies and applications. The book also includes more than 80 mathematical and programming exercises, with worked solutions available to instructors. As a bridge to research in this emergent field, the final chapter presents the frontiers of machine learning in finance from a researcher's perspective, highlighting how many well-known concepts in statistical physics are likely to emerge as important methodologies for machine learning in finance.

Massive Open Online Courses and Higher Education Rebecca Bennett, Mike Kent, 2017-04-21 Since the first MOOC was launched at the University of Manitoba in 2008, this new form of the massification of higher education has been a rollercoaster ride for the university sector. The New York Times famously declared 2012 to be the year of the MOOC. However, by 2014, the number of academic leaders who believed the model was unsustainable doubled to more than 50%. While the MOOC hype has somewhat subsided, the attitudes and anxieties of this peak time can still be seen influencing universities and their administrations. This is the first volume that addresses Massive Open Online Courses from a post-MOOC perspective. We move beyond the initial hype and revolutionary promises of the peak-MOOC period and take a sober look at what endures in an area that is still rapidly growing, albeit without the headlines. This book explores the future of the MOOC in higher education by examining what went right, what went wrong and where to next for the massification of higher education and online learning and teaching. The chapters in this collection address these questions from a wide variety of different backgrounds, methodologies and regional perspectives. They explore learner experiences, the move towards course for credit, innovative design, transformations and implications of the MOOC in turn. This book is valuable reading for students and academics interested in education, eLearning, globalisation and information services.

Will College Pay Off? Peter Cappelli, 2015-06-09 The decision of whether to go to college, or where, is hampered by poor information and inadequate understanding of the financial risk involved. Adding to the confusion, the same degree can cost dramatically different amounts for different people. A barrage of advertising offers new degrees designed to lead to specific jobs, but we see no information on whether graduates ever get those jobs. Mix in a frenzied applications process, and pressure from politicians for relevant programs, and there is an urgent need to separate myth from reality. Peter Cappelli, an acclaimed expert in employment trends, the workforce, and education, provides hard evidence that counters conventional wisdom and helps us make cost-effective choices. Among the issues Cappelli analyzes are: What is the real link between a college degree and a job that enables you to pay off the cost of college, especially in a market that is in constant change? Why it may be a mistake to pursue degrees that will land you the hottest jobs because what is hot today is unlikely to be so by the time you graduate. Why the most expensive colleges may actually be the cheapest because of their ability to graduate students on time. How parents and students can find out what different colleges actually deliver to students and whether it is something that employers really want. College is the biggest expense for many families, larger even than the cost of the family home, and one that can bankrupt students and their parents if it works out poorly. Peter Cappelli offers vital insight for parents and students to make decisions that both make sense financially and provide the foundation that will help students make their way in the world.

The College Conversation Eric J. Furda, Jacques Steinberg, 2020-09-22 From an Ivy League dean and a college admissions expert, a guide to help parents support their children as they navigate their way to college The College Conversation is a comprehensive resource for mapping the path through the college application process that provides practical advice and reassurance to keep both anxious parents and confused children sane and grounded. Rather than adding to the existing canon of How to Get In college guides or rankings, Eric Furda and Jacques Steinberg provide a step-by-step approach to having the tough conversations on this topic with less stress and more success. The book is organized around key discussions and themes that trace the chronological arc of admissions and financial aid--beginning before the assembly of a list of potential colleges and continuing through the receipt of decisions--with a final section that includes advice on the first year of college. The topics include preliminary conversations about the search, and specifically how parents can think about their children's interests and what kind of college would best suit them; choosing a college (based on its curriculum, culture, and community); writing the most effective essays; assessing acceptances, including considerations of finances and aid; and making the transition from high school to college life. The College Conversation will provide parents, students, and counselors with the credible, level-headed information often missing in this process, as well as a much-needed dash of perspective borne of experience.

The University Next Door Mark Schneider, KC Deane, 2015-04-28 The challenges public comprehensive universities face today are expanding—they have been challenged to enroll and graduate more students, adopt new technologies that lower cost without sacrificing quality, and align program and curricular offerings with the skills that employers require. While these universities have a long history of adapting to change, today's environment will likely test the capabilities of even the most adaptive institutions. This volume assembles a team of experts from a variety of disciplines to examine both the history

of the comprehensive university and what lies ahead. Overall, the book grapples with such questions as: How do these institutions adapt to serve the growing population of non-traditional students? How well do they prepare graduates for the labor market? Can partnerships between community colleges and comprehensive universities bolster student success? The University Next Door draws much-needed attention to a set of institutions that has historically received little notice, yet play an important role in meeting our new attainment goals and helping the American economy grow. Book Features: Examines the role of comprehensive universities from start to finish—their history and future. Uses empirical analysis to explore complex questions about which students choose these universities and why. Explores how these institutions might struggle under a federal ratings system such as the one proposed by President Obama. Discusses how these institutions can better monitor the needs of the economy and better educate students to fill those needs. Provides recommendations to inform future decisions about higher education policy. “In chapter after chapter, the contributors critically assess whether comprehensive universities can respond to the nation's ambitious call to action. This compelling volume is a valuable starting point for anybody concerned about the future of the institutions that help define American higher education as we know it today.” —Richard G. Rhoda, executive director, Tennessee Higher Education Commission “Schneider/Deane provides much-needed illumination on the U.S. higher education sector that will play a critical role in meeting the nation’s educational, workforce, and economic goals. It will serve as a valuable resource for all stakeholders who seek to affect positive change in policy and practice at public comprehensive universities.” —Daniel J. Hurley, associate vice president for government relations and state policy, American Association of State Colleges and Universities

Reinforcement Learning, second edition Richard S. Sutton, Andrew G. Barto, 2018-11-13 The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo

Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

The Customer-Funded Business John Mullins, 2014-07-21 Who needs investors? More than two generations ago, the venture capital community - VCs, business angels, incubators and others - convinced the entrepreneurial world that writing business plans and raising venture capital constituted the twin centerpieces of entrepreneurial endeavor. They did so for good reasons: the sometimes astonishing returns they've delivered to their investors and the astonishingly large companies that their ecosystem has created. But the vast majority of fast-growing companies never take any venture capital. So where does the money come from to start and grow their companies? From a much more agreeable and hospitable source, their customers. That's exactly what Michael Dell, Bill Gates and Banana Republic's Mel and Patricia Ziegler did to get their companies up and running and turn them into iconic brands. In *The Customer Funded Business*, best-selling author John Mullins uncovers five novel approaches that scrappy and innovative 21st century entrepreneurs working in companies large and small have ingeniously adapted from their predecessors like Dell, Gates, and the Zieglers: Matchmaker models (Airbnb) Pay-in-advance models (Threadless) Subscription models (TutorVista) Scarcity models (Vente Privee) Service-to-product models (GoViral) Through the captivating stories of these and other inspiring companies from around the world, Mullins brings to life the five models and identifies the questions that angel or other investors will - and should! - ask of entrepreneurs or corporate innovators seeking to apply them. Drawing on in-depth interviews with entrepreneurs and investors who have actually put these models to use, Mullins goes on to address the key implementation issues that characterize each of the models: when to apply them, how best to apply them, and the pitfalls to watch out for. Whether you're an aspiring entrepreneur lacking the start-up capital you need, an early-stage entrepreneur trying to get your cash-starved venture into take-off mode, an intrapreneur seeking funding within an established company, or an angel investor or

mentor who supports high-potential ventures, this book offers the most sure-footed path to starting, financing, or growing your venture. John Mullins is the author of *The New Business Road Test* and, with Randy Komisar, the widely acclaimed *Getting to Plan B*.

Dreamers and Unicorns Abhijit Bhaduri, 2023-01-09 Which description fits your organisation? DREAMERS: Most Dreamers or early-stage startups, know how to build products, not organisations. Most Dreamers stay local and never become a Unicorn with a national footprint. UNICORNS: Three curses the Unicorns have to watch for—a narcissistic leader, a leadership team of old cronies and a toxic culture. These prevent them from going global and becoming Market Shapers. MARKET SHAPERS: A Market Shaper changes how we live and work-across countries and cultures. Their challenge is to

continuously earn the trust of governments and communities. **INCUMBENTS:** Many Incumbents were once Market Shapers and Unicorns. The leaders don't know that the firm and its offerings are irrelevant. Not being able to attract and retain talent is a warning bell the leaders often ignore. Packed with ideas and innovations, this powerhouse of a book by best-selling author and talent management specialist Abhijit Bhaduri explains why leadership, talent and culture are the new drivers of growth whether you are a Dreamer, a Unicorn, a Market Shaper or an Incumbent.

Examining Internet and Technology around the World Laura M. Steckman,2020-12-02 This book offers comparative insights into the challenges and opportunities surrounding emerging technology and the internet as it is used and perceived throughout the world, providing students with cross-cultural and cross-national perspectives. This volume examines issues pertaining to the internet and technology, including access and censorship, alternative energy technologies, artificial intelligence, autonomous robots, cyberbullying, cybercrime, e-learning, GMOs, online privacy, and virtual and augmented reality. For each topic, the volume features eight country-level perspectives that span the world to allow for comparisons of different nations' specific approaches to the technology or issue. This encyclopedia takes a new direction in understanding the importance and impact of emerging technologies on the world, showing that even when experiencing similar technologically related challenges or advances, these technologies do not form one-size-fits-all solutions for every nation and population. Even when nations develop similar technologies, human dimensions - from policy to social norms to culture - influence people and society across the world differently.
