Rapid Decision Making on the Fire Ground Gary A. Klein, Roberta Calderwood, Anne Clinton-Cirocco, 1988 The objective of this study was to examine the way in which decisions are made by highly proficient personnel, under conditions of extreme time pressure, and where the consequences of the decisions could affect lives and property. The domain of firefighting was selected, and the search focused on the decisions made by Fire Ground Commanders (FGCs) who are responsible for allocating personnel and resources at the scene of a fire. The method used included aspects of critical incident and protocol analysis paradigms. Interviews were conducted with 26 experienced fire fighters (mean amount of experience = 23 years). Each interview covered a critical incident that was non-routine and demanded expertise. In this way, the FGCs handled decision points without any need to consider more than one option. A Recognition Primed Decision (RPD) model was synthesized from these data, which emphasized the use of recognition rather than calculation or analysis for rapid decision making. (sdw) -- Abstract.

Nursing Management of Pediatric Disaster Catherine J. Goodhue,Nancy Blake,2020-05-13 This textbook describes what nurses need to know about pediatric disaster nursing, including public policy, and addresses preparedness for all types of disasters (natural and man-made) and strategies for hospital, school and community preparedness. The book opens with a brief history of disaster nursing and explains the key differences between pediatric and adult disaster nursing. Recent years have been marked by numerous man-made and natural disasters, which have led nurses to seek new resources to be better prepared, in their role as nurses, for all types of disasters. Responding to this lack of resources, the book focuses on the unique needs of babies and children. It is the first and only textbook on pediatric disaster preparedness to include both the physical and psychological effects of disaster. Key aspects covered include: the psychosocial differences in and how to approach children; family reunification; medications, supplies and equipment; and decontamination. Given its breadth of coverage, the book is well suited as a textbook for nursing classes, while also offering a valuable resource for nurses working in the field.
