The United Nations world water development report 2020 UNESCO World Water Assessment Programme, 2020-03-23 The 2020 edition of the WWDR, titled 'Water and Climate Change' illustrates the critical linkages between water and climate change in the context of the broader sustainable development agenda. Supported by examples from across the world, it describes both the challenges and opportunities created by climate change, and provides potential responses - in terms of adaptation, mitigation and improved resilience - that can be undertaken by enhancing water resources management, attenuating water-related risks, and improving access to water supply and sanitation services for all in a sustainable manner. It addresses the interrelations between water, people, environment and economics in a changing climate, demonstrating how climate change can be a positive catalyst for improved water management, governance and financing to achieve a sustainable and prosperous world for all. The report provides a fact-based, water-focused contribution to the knowledge base on climate change. It is complementary to existing scientific assessments and designed to support international political frameworks, with the goals of helping the water community tackle the challenges of climate change, and informing the climate change community about the opportunities that improved water management offers in terms of adaptation and mitigation.

Methods for Assessment of Soil Degradation Rattan Lal,Winfried E. H. Blum,C. Valentin,B.A. Stewart,2020-11-26
Soil degradation has serious global impacts on agronomic, economic, and sociopolitical conditions, however, statistics regarding the degree of these impacts has been largely unreliable. This book aims to standardize the methodology for obtaining reliable and objective data on soil degradation. It will also identify and develop criteria for assessing the severity of soil degradation, providing a realistic scenario of the problem.

Industrial Scale Natural Products Extraction Hans-Jörg Bart,Stephan Pilz,2011-08-08
Covering the latest technologies in process engineering, this handbook and ready reference features high pressure processing, alternative solvents and processes, extraction technologies and biotransformations -- describing greener, more efficient and sustainable techniques. The result is an expert account of engineering details from lab-scale experiments to large-scale industrial design. The major focus is on the engineering aspects of extraction with organic and supercritical solvents, ionic liquids or surfactant solutions, and is supplemented by aspects of both up- and downstream processing, biotransformation, as well as a survey of typical products in food, pharmaceutical and cosmetic applications. This is rounded off by market developments, economic considerations and regulations requirements in the field Authored by experts from leading industrial and academic institutions, this is essential reading for the hands-on scientist and office manager alike.

Freshwater Algae Edward G. Bellinger,David C. Sigeo,2011-09-20
Freshwater Algae: Identification and Use as Bioindicators provides a comprehensive guide to temperate freshwater algae, with additional information on key species in

relation to environmental characteristics and implications for aquatic management. The book uniquely combines practical material on techniques and water quality management with basic algal taxonomy and the role of algae as bioindicators. *Freshwater Algae: Identification and Use as Bioindicators* is divided into two parts. Part I describes techniques for the sampling, measuring and observation of algae and then looks at the role of algae as bioindicators and the implications for aquatic management. Part II provides the identification of major genera and 250 important species. Well illustrated with numerous original illustrations and photographs, this reference work is essential reading for all practitioners and researchers concerned with assessing and managing the aquatic environment.

Growing Media for Ornamental Plants and Turf Kevin A. Handreck, Neil D. Black, 2005

Tropical Trees and Forests F. Halle, R.A.A. Oldeman, P.B. Tomlinson, 2011-12-15 This book is not an exhaustive survey of known information in the manner of a text-book -the subject is much too big for this to be possible in a relatively concise volume but presents a point of view. We are concerned ultimately with the analysis of tropical ecosystems, mainly forests, in terms of their constituent units, the individual trees. Many different approaches are possible in the analysis of tropical forests. A simple one is to treat the trees as obstacles which in a military sense intercept projectiles or are a hindrance to foot soldiers (ADDOR et al., 1970). A similar approach might be adopted by an engineer confronted by a forest which has to be removed to permit road construction. The timber merchant is concerned with the ability of a forest to yield saleable lumber. The interest here is in the size of the larger trunks with some concern for the kinds of trees. At a less destructive level the scientist aims to comprehend the forest from many different points of view. The forester himself, in conjunction

with the taxonomist, will wish to analyze the floristic composition of the forest and perhaps account for species diversity in an evolutionary time scale (e.g., FEDOROV, 1966; ASHTON, 1969). The evolutionary biologist in his turn may be concerned with reproductive strategies in forest trees (e.g., BAWA, 1974), especially in a comparative way.

Capfitogen Food and Agriculture Organization (Fao), 2015-09-30 This program is focused on the development of appropriate technologies for countries which are extremely agrobiodiverse but have limited economic resources. Its function is to develop and transfer technology and provide the appropriate training for technical personnel from those Latin American countries signatories to the Treaty. The warm reception given to the tools and methodologies developed under the auspices of the CAPFITOGEN program in 2013, has meant that some countries targeted by the program have organized national workshops on their own initiative, financed by the most interested parties. At the same time, there has been interest from other countries and regions not initially targeted by the program, which have been asking for tools and transfer and training activities. Thus the program CAPFITOGEN is primed to function not only as a generator and facilitator of appropriate technology, but also as a model of transfer in itself. One of its most innovative aspects is the way in which it seeks to involve people who have developed scientific methodologies. They are invited to develop the tools provided by the program based on their methodologies and to carry out the technical training and transfer activities themselves. This model means that the program beneficiaries are guaranteed direct access to the scientists and developers in order to answer queries or discuss cases. At the same time, the scientists themselves benefit directly from the experiences and issues tackled by the technical experts from the national programs, an outcome with a positive impact on future investigations with a more focused application and better suited to meet real needs.
