Exploring the Domain of Accident Law Don DeWees,David Duff,Michael Trebilcock,1996-01-04 In the mid 1980s, there was a crisis in the availability, affordability, and adequacy of liability insurance in the United States and Canada. Mass tort claims such as the asbestos, DES, and Agent Orange litigation generated widespread public attention, and the tort system came to assume a heightened prominence in American life. While some scholars debate whether or not any such crisis still exists, there has been an increasing political, judicial and academic questioning of the goals and future of the tort system. Exploring the Domain of Tort Law reviews the evidence on the efficacy of the tort system and its alternatives. By looking at empirical evidence in five major categories of accidents--automobile, medical malpractice, product-related accidents, environmental injuries, and workplace injuries--the authors evaluate the degree to which the tort system conforms to three

normative goals: deterrence, corrective justice, and distributive justice. In each case, the authors review the deterrence and compensatory properties of the tort system, and then review parallel bodies of evidence on regulatory, penal, and compensatory alternatives. Most of the academic literature on the tort system has traditionally been doctrinal or, in recent years, highly theoretical. Very little of this literature provides an in-depth consideration of how the system works, and whether or not there are any feasible alternatives. Exploring the Domain of Tort Law contributes valuable new evidence to the tort law reform debate. It will be of interest to academic lawyers and economists, policy analysts, policy professionals in government and research organizations, and all those affected by tort law reform.

The Global Automotive Industry Paul Nieuwenhuis,Peter Wells,2015-08-06 The automotive industry is still one of the world's largest manufacturing sectors, but it suffers from being very technology-focused as well as being relatively short-term focused. There is little emphasis within the industry and its consultancy and analyst supply network on the broader social and economic impacts of automobility and of the sector that provides it. The Global Automotive Industry addresses this need and is a first port of call for any academic, official or consultant wanting an overview of the state of the industry. An international team of specialist researchers, both from academia and business, review and analyse the key issues that make vehicle manufacturing still the world's premier manufacturing sector, closely tied in with the fortunes of both established and newly emerging economies. In doing so, it covers issues related to manufacturing, both established practices as well as new developments; issues relating to distribution, marketing and retail, vehicle technologies and regulatory trends; and, crucially, labour practices and the people who build cars. In all this it explains both how the current situation arose and also likely future trajectories both in terms of social and regulatory trends, as the technological, marketing and labour practice responses to those, leading in many cases to the development of new business models. Key features Provides a global overview of the automotive industry, covering its current state and considering future challenges Contains contributions from international specialists in the automotive sector Presents current research and sets this in an historical and broader industry context Covers threats to the industry, including globalization, economic and environmental sustainability The Global Automotive Industry is a must-have reference for researchers and practitioners in the automotive industry and is an excellent source of information for business schools, governments, and graduate and undergraduate students in automotive engineering.

Introduction to Business and Industrial Security and Loss Control Raymond P. Siljander,2008 This book presents a treatise on the topic of business and industrial security and loss control as it applies to the protection of assets and

personnel. The material in this thoroughly revised and updated second edition will enable law enforcement officers, security/loss control personnel and business managers to view security/loss control needs from a broad perspective and thus devise security measures that will reflect a well-thought-out systems approach. The book contains a wide range of information, and is presented in terms that will be meaningful to readers that do not have formal training or experience in the field of security and loss control. The information is of a practical nature which, if applied in a variation that is consistent with specific needs, will tailor a program that will result in a well-understood balanced systems approach. Through further understanding, the effectiveness of police and security personnel is enhanced as they perform crime prevention duties and assist local businesses in upgrading security measures. Replete with numerous illustrations and tables, the author provides a security/loss control survey for businesses, plus an overview of security for both businesses and industries. Specialized chapters on executive protection, fire dynamics and hazardous materials, security cameras, loss control surveys, loss control manager participation, and managerial leadership are included. This book will help the officer fine-tune investigative techniques when a crime, such as a burglary, has been committed at a business.
