The Journey of Israel Dr. Brian J. Bailey,2015-10-15 The study of Israel's journey from Egypt to the Promised Land is in reality a picture of the spiritual progression of a believer from new born babes in Christ to becoming mature fathers and mothers in the faith. Dr. Bailey will take you on a journey, where you will be given keys to attaining ever-greater heights in your relationship with Christ, until you come unto spiritual Mount Zion, and can say with the Apostle Paul, "I press toward the mark for the prize of the high calling of God in Christ Jesus."

Binocular rivalry: a gateway to consciousness Alexander Maier,Theofanis Panagiotaropoulos,Naotsugu Tsuchiya,Georgios A. Keliris, Brain-mind problems like consciousness have been stimulating the interest of philosophers and scientists since the ancient times. In the last decades, the dramatic development of neuroscience has allowed studying such phenomena at several different levels - from single neurons to behavior. Binocular rivalry, a paradigm dissociating the sensory input from the conscious perception during dichoptic viewing of incongruent images, has been a celebrated example of such a tool. During the last century, empirical research on binocular rivalry contributed the first important insights into the neuronal mechanisms of subjective visual perception. Recent advances in brain imaging and electrophysiological recording/stimulating techniques as well as novel theoretical concepts and analytical methods could be exploited to expand our knowledge on this fascinating phenomenon of visual perception and elucidate the neural processes underlying visual consciousness. This

Research Topic aims to bring together contributions that could expand the current frontiers of knowledge in binocular rivalry. In particular we would like to focus on reviews, hypothesis & theory or original research articles that specifically combine novel concepts, analytical tools and neurophysiological techniques with binocular rivalry. We expect that these contributions will a) integrate the vast knowledge already existing in the field b) formulate and, when possible, address questions under the light of recent methodological advances in neuroscience and c) provide a benchmark that will stimulate future cutting edge research.

Generations Kieran McCarthy, Seamus O'Donoghue, 2008 *Generations* begins by tracing the story of the river Lee. This is an area rich in ancient history, and a wealth of geographical detail and historical background is explored and explained. The geography of the valley is varied and ever-changing, and the river Lee's progress through its many different townlands to disgorge at Cork Harbour and into the Irish Sea is carefully charted while telling the story of local saints such as St Finbarre, and of the origins of many of the townland names. The ever-growing need to provide an improved level of electricity service for existing customers, as well as the new demands created by an ambitious programme for rural electrification set in motion the process for the building of the Lee stations and the damming of the valley, 40 kilometres in length and over 22 kilometres wide. This was a colossal task, and necessitated years of minute planning, geographical surveys and preservation orders on, for example, the Gearagh region, and land purchase, with the final contracts for the works in place towards the end of 1952. Detailed land acquisition records and newspaper documentation afford a fascinating glimpse into what must have been an enormous upheaval for the 200 families involved, many of whom relocated elsewhere as the valley was flooded and their homes were submerged. The Lee hydroelectric scheme transformed the Lee valley by opening up new tourism opportunities for fishing, waterskiing, sailing and rowing, and by securing the future supply of clean and economical electricity and water throughout the Cork area and beyond. The impact of the Lee scheme has been positive and lasting. This beautifully illustrated book is a fascinating record of that achievement, and a testament to its continuing success.--BOOK JACKET.

The Taming of Reid Donovan Marilyn Pappano, 2011-07-15 *Southern Knights Trouble with a capital T... THE ORIGINAL BAD BOY* Reid Donovan had heard himself described that way so many times that it was impossible to think of

himself as anything but. Then he met Cassie Wade—a woman who believed in him, and whose love made him almost believe in himself. Everything he had never dared to dream of was within reach. And then he was asked to walk away from it all... Should he do it? Could he do it? Did he even have a choice? And when it was all over, would he have Cassie to go back to? Or would he once again find himself on the outside looking in? *Southern Knights*. James, Reid and Nicholas: They came home expecting to find danger—but love took them by surprise!

Educational visions Rebecca Ferguson,Ann Jones,Eileen Scanlon,2019-12-18 What have been the biggest successes in educational technology - and why have they succeeded when others have failed? *Educational Visions* shows how innovations including citizen science, learning at scale, inclusive education, learning design and analytics have developed over decades. The book is shaped by the visions pursued by one research group for the past 40 years. It outlines the group's framework for innovation and shows how this can be put into practice to achieve long-term results that benefit both students and teachers at every educational level.

Archaeology at the Millennium Gary M. Feinman,T. Douglas Price,2007-10-17 An internationally distinguished roster of contributors considers the state of the art of the discipline of archaeology at the turn of the 21st century and charts an ambitious agenda for the future. The chapters address a wide range of topics including paradigms, practice, and relevance of the discipline; paleoanthropology; fully modern humans; holocene hunter-gatherers; the transition to food and craft production; social inequality; warfare; state and empire formation; and the uneasy relationship between classical and anthropological archaeology.

The Voice in the Night William Hope Hodgson,2015-02-10 *The Voice in the Night*, a short story by William Hope Hodgson, has been adapted by the cinema a number of times, most prominently in the 1963 Japanese film "Matango". It also appeared in Alfred Hitchcock's paperback anthology "Alfred Hitchcock Presents: Stories They Wouldn't Let Me Do on TV". William Hope Hodgson (1877 - 1918) was an English author that produced essays and novels, that mixes horror, fantastic fiction and science fiction. Hodgson used his experiences at sea to his short stories, many of which are set on the ocean. Hodgson's single most famous story is probably *The Voice in the Night*, where a fisherman's aboard a ship in the North Pacific, on night watch in a fog-bank, hears a voice call out from the sea. The voice asks for food, but it insists it can come no closer, that it fears the light, and that God is merciful. In payment for the food it tells a frightening tale... *The Voice in the Night* integrates the collection "Classics of World Literature", developed by Atlântico Press, a publisher company present in the global editorial market, since 1992.

Toric Varieties David A. Cox,John B. Little,Henry K. Schenck,2024-06-25 Toric varieties form a beautiful and accessible part of modern algebraic geometry. This book covers the standard topics in toric geometry; a novel feature is that each of the first nine chapters contains an introductory section on the necessary background material in algebraic geometry. Other

topics covered include quotient constructions, vanishing theorems, equivariant cohomology, GIT quotients, the secondary fan, and the minimal model program for toric varieties. The subject lends itself to rich examples reflected in the 134 illustrations included in the text. The book also explores connections with commutative algebra and polyhedral geometry, treating both polytopes and their unbounded cousins, polyhedra. There are appendices on the history of toric varieties and the computational tools available to investigate nontrivial examples in toric geometry. Readers of this book should be familiar with the material covered in basic graduate courses in algebra and topology, and to a somewhat lesser degree, complex analysis. In addition, the authors assume that the reader has had some previous experience with algebraic geometry at an advanced undergraduate level. The book will be a useful reference for graduate students and researchers who are interested in algebraic geometry, polyhedral geometry, and toric varieties.

Language: Its Nature, Development and Origin Otto Jespersen, 2020-09-28 The science of language began, tentatively and approximately, when the minds of men first turned to problems like these: How is it that people do not speak everywhere the same language? How were words first created? What is the relation between a name and the thing it stands for? Why is such and such a person, or such and such a thing, called this and not that? The first answers to these questions, like primitive answers to other riddles of the universe, were largely theological: God, or one particular god, had created language, or God led all animals to the first man in order that he might give them names. Thus in the Old Testament the diversity of languages is explained as a punishment from God for man's crimes and presumption. These were great and general problems, but the minds of the early Jews were also occupied with smaller and more particular problems of language, as when etymological interpretations were given of such personal names as were not immediately self-explanatory. The same predilection for etymology, and a similar primitive kind of etymology, based entirely on a more or less accidental similarity of sound and easily satisfied with any fanciful connexion in sense, is found abundantly in Greek writers and in their Latin imitators. But to the speculative minds of Greek thinkers the problem that proved most attractive was the general and abstract one, Are words natural and necessary expressions of the notions underlying them, or are they merely arbitrary and conventional signs for notions that might have been equally well expressed by any other sounds? Endless discussions were carried on about this question, as we see particularly from Plato's *Kratylos*, and no very definite result was arrived at, nor could any be expected so long as one language only formed the basis of the discussion—even in our own days, after a century of comparative philology, the question still remains an open one. In Greece, the two catchwords *phúsei* (by nature) and *théseí* (by convention) for centuries divided philosophers and grammarians into two camps, while some, like Sokrates in Plato's dialogue, though admitting that in language as actually existing there was no natural connexion between word and thing, still wished that an ideal language might be created in which words and things would be tied together in a perfectly rational way—thus paving the way for Bishop Wilkins and other modern constructors of philosophical languages.

Holiday Baby Scandal Jules Bennett,2016-11-01 A Christmas surprise is on the way for one Boston woman after a fling with a sexy mob enforcer in this contemporary romance. Taken in at a young age, Ryker Barrett owes the O'Shea family everything. Which means his "little sister" Laney is way off-limits . . . no matter how seductive the brunette beauty is! She's the one woman he can't have a casual fling with . . . so how in the hell did he end up in her bed? Laney knows the dangerous Ryker is the perfect man for her no matter how hard he resists. But when one night of unbridled passion leaves Laney pregnant with his child, she'll need a Christmas miracle to convince him that loving her won't destroy his place in her overprotective family. "Jules Bennett writes wonderfully romantic, emotional stories . . . guaranteed to grip your heart."
—New York Times–bestselling author Lori Foster

Second Skins Jay Prosser,1998-04-07 Do we need bodies for sex? Is gender in the head or in the body? In *Second Skins* Jay Prosser reveals the powerful drive that leads men and women literally to shed their skins and--in flesh and head--to cross the boundary of sex. Telling their story is not merely an act that comes after the fact, it's a force of its own that makes it impossible to forget that stories of identity inhabit autobiographical bodies. In this stunning first extensive study of transsexual autobiography, Jay Prosser examines the exchanges between body and narrative that constitute the phenomenon of transsexuality. Showing how transsexuality's somatic transitions are spurred and enabled by the formal transitions of narrative, Prosser uncovers a narrative tradition for transsexual bodies. Sex change is a plot--and thus appropriately transsexuals make for adept and absorbing authors. In reading the transsexual plot through transsexuals' own recounting, Prosser not only gives us a new and more accurate rendition of transsexuality. His book suggests transsexuality, with its extraordinary conjunctions of body and narrative, as an identity story that transitions across the body/language divide that currently stalls poststructuralist thought. The form and approach of *Second Skins* works to cross other important and parallel divides. In addition to analyzing transsexual textual accounts, the book includes some 30 photographic portraits of transsexuals-- poignant attempts by transsexuals to present themselves unmediated to the world except by the camera. And the author does not shy from exposure himself. Interjecting the personal into his theoretical discussion and close textual work throughout the book, Prosser reads and writes his own body, his purpose in that stylistic crossing to stake out transsexuality--and hence this very book--as his own body's narrative.

Francesca Matteucci's chapter is on Chemical evolution of the Milky Way and its Satellites. As designed by the SSAA, books in this series - and this one too - are targeted at graduate and PhD students and young researchers in astronomy, astrophysics and cosmology. Anatomy and Physiology of the Circulatory and Ventilatory Systems Marc Thiriet, 2016-08-23 Together, the volumes in this series present all of the data needed at various length scales for a multidisciplinary approach to modeling and simulation of flows in the cardiovascular and ventilatory systems, especially multiscale modeling and coupled simulations. The cardiovascular and respiratory systems are tightly coupled, as their primary function is to supply oxygen to, and remove carbon dioxide from, the body's cells. Because physiological conduits have deformable and reactive walls, macroscopic flow behavior and prediction must be coupled to nano- and microscopic events in a corrector scheme of regulated mechanism. Therefore, investigation of flows of blood and air in physiological conduits requires an understanding of the biology, chemistry, and physics of these systems, together with the mathematical tools to describe their functioning in quantitative terms. The present volume focuses on macroscopic aspects of the cardiovascular and respiratory systems in normal conditions, i.e., anatomy and physiology, as well as the acquisition and processing of medical images and physiological signals.
