The book is organized in such a way that the words are grouped together by common themes for easy cross-referencing. The groups of words found in the text include bone names, names applied to muscles, words pertaining to joint types, and anatomical words where Latin and Greek are often used. Anatomists, physicians, and students and workers in the field of medicine will find great use of this book.

A Heritage of Holy Wood: The Legend of the True Cross in Text and Image Barbara Baert,2004-07-01 In the fourth century the idea arose that the Cross on which Christ was crucified had been found by Helena, mother of Emperor Constantine. Thus began a legend that would grow and flourish throughout the Middle Ages and cause the diffusion of countless splinters of holy wood. And where there is wood, there was once a tree. Could it be that the Cross was made from that most noble species, the Tree of Life? So, gathering characters along the way, the legend evolved into a tale that

stretches from the Creation to the End of Time. *A Heritage of Holy Wood* is the first reconstruction of the iconographic and literary tradition of the Legend of the True Cross. Its broad scope encompasses relic cults, pilgrimages, travellers' tales and the Tree of Life and involves Church Fathers, crusader kings, Teutonic Knights and mendicant orders, all of which influenced the legend's depiction from its earliest representation in manuscripts, reliquaries and altarpieces, to the great monumental cycles of the high Middle Ages. If the holy wood was the medium of medieval memory, *A Heritage of Holy Wood* reveals the growth rings of fifteen centuries of imagery.

375 Essential Oils and Hydrosols Jeanne Rose, 1999-08-24 This thorough guide profiles 375 different essential oils according to botanical family, habit and growth, chemical components, and actions. Graceful botanical illustrations illuminate the text.

An Alchemical Quest for Universal Knowledge Georgiana D. Hedesan, 2016-04-20 History of science credits the Flemish physician, alchemist and philosopher Jan Baptist Van Helmont (1579-1644) for his contributions to the development of chemistry and medicine. Yet, as this book makes clear, focussing on Van Helmont's impact on modern science does not do justice to the complexity of his thought or to his influence on successive generations of intellectuals like Robert Boyle or Gottfried Leibniz. Revealing Van Helmont as an original thinker who sought to produce a post-Scholastic synthesis of religion and natural philosophy, Georgiana Hedesan reconstructs his ambitious quest for universal knowledge as it emerges from the text of the *Ortus medicinae* (1648). Published after Van Helmont's death by his son, the work can best be understood as a compilation of finished and unfinished treatises, the historical product of a life unsettled by religious persecution and personal misfortune. The present book provides a coherent account of Van Helmont's philosophy by analysing its main tenets. Divided into two parts, the study opens with a background to Van Helmont's concept of an alchemical Christian philosophy, demonstrating that his outlook was deeply grounded in the tradition of medical alchemy as reformed by Theophrastus von Hohenheim, called Paracelsus (1493-1541). It then reconstitutes Van Helmont's biography, while giving a historical

dimension to his intellectual output. The second part reconstructs Van Helmont's Christian philosophy, investigating his views on God, nature and man, as well as his applied philosophy. Hedesan also provides an account of the development of Van Helmont's thought throughout his life. The conclusion sums up Van Helmont's intellectual achievement and highlights avenues of future research.

Entheogens and the Development of Culture John A. Rush, 2013-07-30 *Entheogens and the Development of Culture* makes the radical proposition that mind-altering substances have played a major part not only in cultural development but also in human brain development. Researchers suggest that we have purposely enhanced receptor sites in the brain, especially those for dopamine and serotonin, through the use of plants and fungi over a long period of time. The trade-off for lowered functioning and potential drug abuse has been more creative thinking--or a leap in consciousness. Experiments in entheogen use led to the development of primitive medicine, in which certain mind-altering plants and fungi were imbibed to still fatigue, pain, or depression, while others were taken to promote hunger and libido. Our ancestors selected for our neural hardware, and our propensity for seeking altered forms of consciousness as a survival strategy may be intimately bound to our decision-making processes going back to the dawn of time. Fourteen essays by a wide range of contributors—including founding president of the American Anthropological Association's Anthropology of Religion section Michael Winkelman, PhD; Carl A. P. Ruck, PhD, Boston University professor of classics and an authority on the ecstatic rituals of the god Dionysus; and world-renowned botanist Dr. Gaston Guzman, member of the Colombian National Academy of Sciences and expert on hallucinogenic mushrooms—demonstrate that altering consciousness continues to be an important part of human experience today. Anthropologists, cultural historians, and anyone interested in the effects of mind-altering substances on the human mind and soul will find this book deeply informative and inspiring.

The chosen trees have all had a profound effect on the planet and humankind. Asceticism in Early Taoist Religion Stephen Eskildsen, 1998-10-01 Using a wide variety of original sources, this book brings to light how and why asceticism was carried out by Taoists during the first six centuries of the common era. It examines the practices of fasting, celibacy, self-imposed poverty, wilderness seclusion, and sleep-avoidance, and it discusses the beliefs and attitudes that motivated and justified such drastic actions. Asceticism in Early Taoist Religion demonstrates that although Taoist ascetics pursued austerities that were extremely rigorous, they did not seek to mortify the flesh. Through their austerities, they almost always sought to improve their physical strength and health, because they aspired toward physical longevity as well as spiritual perfection. Even though they sometimes taxed their bodies severely, they believed that their strength and health would eventually be restored if they persevered. The highest goal was to ascend to divine realms in an immortal body. However, certain beliefs that emerged during this period—particularly those influenced by Buddhism—may have caused some Taoist ascetics to virtually abandon their concern with longevity, and to focus disproportionately upon the perfection of the spirit. Such ascetics were more likely to purposely harm and neglect their bodies, contradictory as this may have been to the cherished ideals of the Taoist religion. Eskildsen traces how this problem may have emerged, and how it was viewed and dealt with by those who maintained the ideal of longevity.

Examination Questions and Answers in Basic Anatomy and Physiology Martin Caon, 2020-08-03 This third edition provides 2900 multiple choice questions on human anatomy and physiology, and some biophysical science, separated into 20 chapters and 68 categories. In addition, there are 64 essay topics. The answer to each question is accompanied by an explanation. Each chapter has an introduction to set the scene for the questions to come. However, not all possible information is provided within these Introductions, so an Anatomy and Physiology textbook is an indispensable aid to understanding the answers. The textbook offers a more holistic approach to the subjects of anatomy and physiology by also including biomechanics, biophysics and biochemistry. The questions have been used in end-of-semester examinations for undergraduate anatomy and physiology courses, and as such, reflect the focus of these particular courses and are pitched at this level to challenge students that are beginning their training in anatomy and physiology. The question and answer combinations are intended for use by teachers, to select questions for their next examinations, and by students, when

studying for an upcoming test. Students enrolled in the courses for which these questions were written include nursing, midwifery, paramedic, physiotherapy, occupational therapy, nutrition and dietetics, health sciences, exercise science, and students taking an anatomy and physiology course as an elective.

Dante and the Franciscans Santa Casciani,2006-12-01 Only the second volume dedicated to Dante and the Franciscans, this collection of essays offers a Franciscan reading of the *Divine Comedy*. Nine of the ten essays address how Dante's *Comedy* and his *Vita Nuova* were influenced by Franciscan spirituality; the tenth essay addresses the influence that Dante's *Comedy* had on the preaching of the Franciscan Order. More specifically, the essays in this volume are truly

interdisciplinary and contribute to the understanding of how Dante understood and employed Franciscan sources in his literary production and how Bernardino of Siena integrated Dante's work in his preaching.

Eugenics in the Garden Fabiola López-Durán, 2018-03-01 As Latin American elites strove to modernize their cities at the turn of the twentieth century, they eagerly adopted the eugenic theory that improvements to the physical environment would lead to improvements in the human race. Based on Jean-Baptiste Lamarck's theory of the "inheritance of acquired characteristics," this strain of eugenics empowered a utopian project that made race, gender, class, and the built environment the critical instruments of modernity and progress. Through a transnational and interdisciplinary lens, *Eugenics in the Garden* reveals how eugenics, fueled by a fear of social degeneration in France, spread from the realms of medical science to architecture and urban planning, becoming a critical instrument in the crafting of modernity in the new Latin world. Journeying back and forth between France, Brazil, and Argentina, Fabiola López-Durán uncovers the complicity of physicians and architects on both sides of the Atlantic, who participated in a global strategy of social engineering, legitimized by the authority of science. In doing so, she reveals the ideological trajectory of one of the most celebrated architects of the twentieth century, Le Corbusier, who deployed architecture in what he saw as the perfecting and whitening of man. The first in-depth interrogation of eugenics' influence on the construction of the modern built environment, *Eugenics in the Garden* convincingly demonstrates that race was the main tool in the geopolitics of space, and that racism was, and remains, an ideology of progress.
