Emergent Commercial Trends and Aviation Safety Ruwantissa I.R. Abeyratne, 2018-08-17 Published in 1999, the pre-eminent concern of the air transport industry and aircraft manufacturers at the present time is safety in the air. It is also the foremost priority of the International Civil Aviation Organization (ICAO). The basic strategic objective of the ICAO Strategic Action Plan, which was adopted by the ICAO Council in 1997, is to further safety, security and efficiency of international civil aviation. This book discusses the causative factors which may adversely affect the safety of civil aviation and analyzes the regulatory process which has been set in motion by the ICAO and the regional civil aviation bodies - AFCAC, ECAC and LACAC - in order to ensure the safety of international civil aviation and effectively manage the factors which may threaten the safety of air transport. It also offers self-contained conclusions after the examination of each instance, calculated to ensure the safety of aviation. The book will prove useful to lawyers, government agencies, airlines, economists, social scientists, politicians and journalists.

Law and Policy of Substantial Ownership and Effective Control of Airlines Isabelle Lelieur, 2017-03-02 The principle of airline substantial ownership and effective control is one of the biggest impediments to the air transport industry growth. Legitimately included in the bilateral agreements since 1946 for national security reasons, States have maintained the principle over the years and used it as a protectionist tool, as well as a bargaining chip. Today, considering that liberalization and globalization concepts are already well-established in the biggest industrial sectors, and a large number of cross-border investments occurs in most of the service sectors through mergers and acquisitions, the time is ripe to remove national restrictions on foreign investments from the airline industry. This comprehensive book identifies those factors that still justify the imposition of national ownership restrictions on airlines and examines the prospects for change in the current policies and regulatory regimes that support them. The readership includes specialists in government departments of transportation, civil aviation authorities and agencies, international organizations, airline executives concerned with general management, economic, legal and public affairs, aviation lawyers, airline pilot associations, law schools concerned with international aviation law.

In-Time Aviation Safety Management National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Aviation Safety Assurance Committee, 2018-03-12 Decades of continuous efforts to address known hazards in the national airspace system (NAS) and to respond to issues illuminated by analysis of incidents and accidents have made commercial airlines the safest mode of transportation. The task of maintaining a high level of safety for commercial airlines is complicated by the dynamic nature of the NAS. The number of flights by commercial transports is increasing; air traffic control systems and procedures are being modernized to increase the capacity and efficiency of the NAS; increasingly autonomous systems are being developed for aircraft and ground systems, and small aircraft—most notably unmanned aircraft systems—are becoming much more prevalent. As the NAS evolves to accommodate these changes, aviation safety programs will also need to evolve to ensure that changes to the NAS do not inadvertently introduce new risks. Real-time system-wide safety assurance (RSSA) is one of six focus areas for the National Aeronautics and Space Administration (NASA) aeronautics program. NASA envisions that an RSSA system would provide a continuum of information, analysis, and assessment that supports awareness and action to mitigate risks to safety. Maintaining the safety of the NAS as it evolves will require a wide range of safety systems and practices, some of which are already in place and many of which need to be developed. This report identifies challenges to establishing an RSSA system and the high-priority research that should be implemented by NASA and other interested parties in government, industry, and academia to expedite development of such a system.

Competition and Investment in Air Transport Ruwantissa Abeyratne, 2015-12-17 This book addresses emerging legal and economic issues in competition and investment in air transport, against the backdrop of the role governments and airlines should play in avoiding protectionism and encouraging innovation and creativity. It evaluates current trends in air transport and the direction the industry is taking in the twenty first century. There are discussions on key aspects of air transport, such as safety assurance and environmental protection, as they are impacted by competition. The rapid evolution of aerospace transport and its effect on competition in air transport is also examined. A recurring theme of the book is the influence of creative destruction and disruptive innovation on air transport. This is addressed through an in-depth study of the contentious areas of law relating to the abuse of dominant positions and state aid, as reflected in the ongoing claim by the three largest US carriers against Gulf carriers such as Emirates Airlines, Etihad and Qatar Airways. The US carriers claim that Emirates and Etihad - which operate air services into the United States by virtue of an open-skies agreement between the US and The United Arab Emirates - are using generous subsidies given to them by their governments to illegally capture the “legitimate” market belonging to the US carriers. These issues are clarified in the book using analyses of competition law and investment law as they apply to air transport, free-trade-agreement analogies and an open-skies case study.

Practical Airport Operations, Safety, and Emergency Management Jeffrey Price,Jeffrey Forrest,2016-02-09 Practical Airport Operations, Safety, and Emergency Management: Protocols for Today and the Future focuses on the airport itself, not the aircraft, manufacturers, designers, or even the pilots. The book explores the safety of what's been called 'the most expensive piece of pavement in any city'— the facility that operates, maintains, and ensures the safety of millions of air passengers every year. The book is organized into three helpful sections, each focusing on one of the sectors described in the title. Section One: Airport Safety, explores the airport environment, then delves into safety management systems. Section Two: Airport Operations, continues the conversation on safety management systems before outlining airside and landside operations in depth, while Section Three: Airport Emergency Management, is a careful, detailed exploration of the topic, ending with a chapter on the operational challenges airport operations managers can expect to face in the future. Written by trusted experts in the field, users will find this book to be a vital resource that provides airport operations managers and students with the information, protocols, and strategies they need to meet the unique challenges associated with running an airport. - Addresses the four areas of airport management: safety, operations, emergency management, and future challenges together in one book - Written by leading professionals in the field with extensive training, teaching, and practical experience in airport operations - Includes section on future challenges, including spaceport, unmanned aerial vehicles, and integrated incident command - Ancillary materials for readers to reinforce concepts and instructors teaching operations courses - Focuses on the topics of safety, operations, emergency management, and what personnel and students studying the topic can expect to face in the future
