Duckworth Lewis Frank Duckworth, Tony Lewis, 2011 Name cricket's most famous partnership nowadays and you can forget Hobbs and Sutcliffe, Statham and Trueman or Lillee and Thomson. Instead you have to turn to Duckworth and Lewis, the two statisticians who brought order to the one-day game when rain interfered. These days almost every weather-truncated one-day match throughout the world is decided by the Duckworth Lewis method; this book tells the story behind it; how it came into being and how the two were sometimes pilloried in the media after commentators and correspondents failed to understand the logic behind it. Mathematicians and keen cricket fans, Frank Duckworth, editor of RSS News, the monthly magazine of the Royal Statistical Society, and Tony Lewis, retired university lecturer in mathematical subjects, grew up within a few miles of each other in West Lancashire although they didn't know one another - indeed they had planned to call their formula the 'Lancastrian' method. The book sets out why the method was needed and gives a full explanation of how it works. Although a computer program is needed for top games, those at a lesser level can still use the tables in the book. But the book also shows the human side of the story, how they persuaded the cricket authorities to accept their method; the mistakes they made along the way and how they corrected them; the way they developed it to take account of changes in the way the game is played, and how they coped with increasing fame. Most of all it tells how two mathematicians were able to blend their separate skills to succeed in selling a mathematical product to a non-mathematical public. The duo became so well known that they had a racehorse named after them and then a pop group, although they have a much more famous connection with the world of music than the group The Duckworth Lewis Method: when a student at Liverpool University in the early 1960s Frank Duckworth lodged with Aunt Mimi, the woman who brought up her nephew John Lennon!

In the Steps of Alan Turing: Working in the Digital Age James Lenton Alty,2024-08-16 Computing has developed at an astonishing pace over the last 40 years and Professor Alty has been involved in most aspects from working at the bits/bytes level to higher level management. As a member of the Computer Board for Universities and Research Councils between 1976-81, he chaired a very influential working party on microtechnology which had a major impact both in universities and in industry. One commentator wrote "This report should be tattooed on the DTI's backside"! In 1976, he and his team were

the first to recognise that the postcode was much more important than assisting the posting of letters, and they pioneered its commercial use. He spent a great deal of effort making computers easier to use for the average person. Between 1984 and 1990, he was Executive Director of the Turing Institute for Artificial Intelligence and became very involved with artificial intelligence research around the world. Between 1990 and 2000, his research team made significant improvements to critical computer interfaces in power stations and aircraft. In the 1990s, Professor Alty examined the techniques of musical composition and showed that they could be used in computer interfaces. In 1996, he pioneered the commercial use of digital radio, producing with Roberts Radio the first successful DAB Radio, one of which is on display in the British Science Museum. Finally, in 2000 he and his team performed some important research into dyslexia, which is still highly quoted even today. This book provides an interesting insight into working in the digital age.

A Dingo Ate My Math Book Burkard Polster,Marty Ross,2017-12-27 *A Dingo Ate My Math Book* presents ingenious, unusual, and beautiful nuggets of mathematics with a distinctly Australian flavor. It focuses, for example, on Australians' love of sports and gambling, and on Melbourne's iconic, mathematically inspired architecture. Written in a playful and humorous style, the book offers mathematical entertainment as well as a glimpse of Australian culture for the mathematically curious of all ages. This collection of engaging stories was extracted from the Maths Masters column that ran from 2007 to 2014 in Australia's Age newspaper. The maths masters in question are Burkard Polster and Marty Ross, two (immigrant) Aussie mathematicians, who each week would write about math in the news, providing a new look at old favorites, mathematical history, quirks of school mathematics—whatever took their fancy. All articles were written for a very general audience, with the intention of being as inviting as possible and assuming a minimum of mathematical background.

The Rise Sarah Lewis,2014-03-04 It is one of the enduring enigmas of the human experience: many of our most iconic, creative endeavors--from Nobel Prize-winning discoveries to entrepreneurial inventions and works in the arts--are not achievements but conversions, corrections after failed attempts. The gift of failure is a riddle. Like the number zero, it will always be both a void and the start of infinite possibility. The Rise--a soulful celebration of the determination and courage of the human spirit--makes the case that many of our greatest triumphs come from understanding the importance of this mystery. This exquisite biography of an idea is about the improbable foundations of creative human endeavor.The Rise begins with narratives about figures past and present who range from writers to entrepreneurs; Frederick Douglass, Samuel F. B. Morse, and J. K. Rowling, for example, feature alongside choreographer Paul Taylor, Nobel Prize-winning physicists Andre Geim and Konstantin Novoselov, Arctic explorer Ben Saunders, and psychology professor Angela Duckworth. The Rise explores the inestimable value of often ignored ideas--the power of surrender for fortitude, the criticality of play for innovation, the propulsion of the near win on the road to mastery, and the importance of grit and creative practice. -- Publisher's description.
