The Radical Faces of Godard and Bertolucci Yosefa Loshitzky, 1995 From the radical 1960s through the neo-conservative 1980s and into the early 1990s, the provocative cinematic careers of French director Jean-Luc Godard and Italian director Bernardo Bertolucci have captured the imagination of filmgoers and critics alike. Although their films differ greatly - Godard produces highly cerebral and theoretical works while Bertolucci creates films with more spectacle and emotionalism - their careers have sparked lively discussion and debate, mostly centred around the notion of an Oedipal struggle between them.

An Algebraic Introduction to Complex Projective Geometry Christian Peskine, 1843 In this introduction to commutative algebra, the author chooses a route that leads the reader through the essential ideas, without getting embroiled in technicalities. He takes the reader quickly to the fundamentals of complex projective geometry, requiring only a basic knowledge of linear and multilinear algebra and some elementary group theory. The author divides the book into three parts. In the first, he develops the general theory of noetherian rings and modules. He includes a certain amount of homological algebra, and he emphasizes rings and modules of fractions as preparation for working with sheaves. In the second part, he discusses polynomial rings in several variables with coefficients in the field of complex numbers. After Noether's normalization lemma and Hilbert's Nullstellensatz, the author introduces affine complex schemes and their morphisms; he then proves Zariski's main theorem and Chevalley's semi-continuity theorem. Finally, the author's detailed study of Weil and

Cartier divisors provides a solid background for modern intersection theory. This is an excellent textbook for those who seek an efficient and rapid introduction to the geometric applications of commutative algebra.
