Cities of the Classical World Colin McEvedy, 2019-04-23 'This book will delight any historian. It's a superb gazetteer of 120 centres of ancient civilization' (Daily Telegraph) From Alexandria to York, this unique illustrated guide allows us to see the great centres of classical civilization afresh. The key feature of *Cities of the Classical World* is 120 specially drawn maps tracing each city's thoroughfares and defences, monuments and places of worship. Every map is to the same scale, allowing readers for the first time to appreciate visually the relative sizes of Babylon and Paris, London and Constantinople. There is also a clear, incisive commentary on each city's development, strategic importance, rulers and ordinary inhabitants. This compelling and elegant atlas opens a new window on to the ancient world, and will transform the way we see it.

Natural Language Information Retrieval T. Strzalkowski, 2013-04-17 The last decade has been one of dramatic progress in the field of Natural Language Processing (NLP). This hitherto largely academic discipline has found itself at the center of an information revolution ushered in by the Internet age, as demand for human-computer communication and information access has exploded. Emerging applications in computer-assisted information production and dissemination, automated understanding of news, understanding of spoken language, and processing of foreign languages have given impetus to research that resulted in a new generation of robust tools, systems, and commercial products. Well-positioned government research funding, particularly in the U. S. , has helped to advance the state-of-the-art at an unprecedented pace, in no small measure thanks to the rigorous 1 evaluations. This volume focuses on the use of Natural Language Processing in Information Retrieval (IR), an area of science and technology that deals with cataloging, categorization, classification, and search of large amounts of information, particularly in textual form. An outcome of an information retrieval process is usually a set of documents containing information on a given topic, and may consist of newspaper-like articles, memos, reports of any kind, entire books, as well as annotated image and sound files. Since we assume that the information is primarily encoded as text, IR is also a natural language processing problem: in order to decide if a document is relevant to a given information need, one needs to be able to understand its content.

Lingua Ex Machina William H. Calvin, Derek Bickerton, 2000 A neuroscientist and a linguist show how evolution could have given rise to structured language. A machine for language? Certainly, say the neurophysiologists, busy studying the

language specializations of the human brain and trying to identify their evolutionary antecedents. Linguists such as Noam Chomsky talk about machinelike modules in the brain for syntax, arguing that language is more an instinct (a complex behavior triggered by simple environmental stimuli) than an acquired skill like riding a bicycle. But structured language presents the same evolutionary problems as feathered forelimbs for flight: you need a lot of specializations to fly even a little bit. How do you get them, if evolution has no foresight and the intermediate stages do not have intermediate payoffs? Some say that the Darwinian scheme for gradual species self-improvement cannot explain our most valued human capability, the one that sets us so far above the apes, language itself. William Calvin and Derek Bickerton suggest that other evolutionary developments, not directly related to language, allowed language to evolve in a way that eventually promoted a Chomskian syntax. They compare these intermediate behaviors to the curb-cuts originally intended for wheelchair users. Their usefulness was soon discovered by users of strollers, shopping carts, rollerblades, and so on. The authors argue that reciprocal altruism and ballistic movement planning were curb-cuts that indirectly promoted the formation of structured language. Written in the form of a dialogue set in Bellagio, Italy, *Lingua ex Machina* presents an engaging challenge to those who view the human capacity for language as a winner-take-all war between Chomsky and Darwin.

The God of Life Gustavo Gutiérrez, 1991 Gustavo Gutierrez's latest and most moving book opens with a crowd of two million people gathered in his native Lima, Peru, to greet John Paul II. A couple speak for them all: 'Holy Father, we are hungry. We suffer affliction, we lack work, we are sick. Our hearts are crushed by suffering as we see our tubercular wives giving birth, our children dying, our sons and daughters growing up weak and without a future. But despite all this, we believe in the God of life, and we struggle for this life in the face of death.' How can such people believe in a God of life? That is what this book explains.

How to Make Good Things Happen: Know Your Brain, Enhance Your Life Marian Rojas Estapé, 2021-05-18 An empowering journey through the mechanisms of the mind from one of the world's leading mental health experts. For those in pursuit of a better life, psychiatrist Marian Rojas Estapé presents the essential guide to neuroscience-driven mindfulness. Understanding your brain, managing your emotions, and being aware of your responses to stressors can give you greater self-control. Rather than a gimmicky guidebook, this is a thorough look at how our brains react to stress, threats, hyperstimulation, and the vices of our digital age. With proven techniques backed by solid, up-to-date psychiatric research, Estapé teaches us how to make the best of our lives. Combining science, psychology, and philosophy, Estapé delivers practical advice about how we can cultivate a happy existence. This includes understanding the parts of the brain, setting healthy goals and objectives, strengthening willpower, cultivating emotional intelligence, developing assertiveness, avoiding excessive self-criticism and self-demand, and mastering the proven art of optimism.

Course in General Linguistics Ferdinand de Saussure,1986 Reconstructed from lecture notes of his students, these are the best records of the theories of Ferdinand De Saussure, the Swiss linguist whose theories of language are acknowledged as a primary source of the twentieth century movement known as Structuralism.

Beginning to Spell Rebecca Treiman,1992-10-29 This groundbreaking study on the psycholinguistics of spelling presents the author's original empirical research on spelling and supplies the theoretical framework necessary to understand how children's ability to write is related to their ability to speak a language. The author explores areas in a field dominated by work traditionally concerned with the psychodynamics of reading skills and, in so doing, highlights the importance of learning to spell for both psycholinguists and educators, since as they begin to spell, children attempt to represent the phonological, or sound form, of words. The study of children's spelling can shed light on the nature of phonological systems and can illuminate the way sounds are organized into larger units, such as syllables and words. Research on children's spelling leads directly to an understanding of the way phonological knowledge is acquired and how phonological systems change with the development of reading and writing ability. In addition to this insight concerning cognitive processes, the findings presented here have implications for how spelling should be taught and why some writing systems are easier to master than others. The work will interest a wide range of cognitive and developmental psychologists, psycholinguists, and educational psychologists, as well as linguists and educators interested in psycholinguistics.

Generative Morphology Sergio Scalise,2011-10-18 The architecture of the human language faculty has been one of the main foci of the linguistic research of the last half century. This branch of linguistics, broadly known as Generative Grammar, is concerned with the formulation of explanatory formal accounts of linguistic phenomena with the ulterior goal of gaining insight into the properties of the 'language organ'. The series comprises high quality monographs and collected volumes that address such issues. The topics in this series range from phonology to semantics, from syntax to information structure, from mathematical linguistics to studies of the lexicon.

Amador Fernando Savater,2014-09-30 In a series of letters to his son, the renowned Spanish philosopher delivers sage advice on living an ethical life in today's world. One of Europe's foremost ethicists, Fernando Savater presents a deeply personal inquiry into the art of living well—one addressed to his own teenage son, Amador. In a series of personal letters, Savater encourages his son to recognize his own agency and use it responsibly, to think freely, and to make decisions that are both well-reasoned and empathetic. Amador is a heartfelt and enlightening primer for modern life, and an inspiration for any parent wishing to impart wisdom to their children.

The Perpetual Orgy Mario Vargas Llosa,2011-03-04 *The Perpetual Orgy* is Mario Vargas Llosa's brilliant analysis of Gustav Flaubert's masterpiece *Madame Bovary*. In this remarkable book, we not only enjoy a dazzling explication, but experience a master discoursing at the top of his form on the craft of the novel (Robert Taylor, *The Boston Globe*). It is a tribute to *The Perpetual Orgy* that it sends the reader back to Flaubert's work with renewed interest.

Relative Clauses in Languages of the Americas Bernard Comrie,Zarina Estrada-Fernández,2012-09-20 Patterns of relative clause formation tend to vary according to the typological properties of a language. Highly polysynthetic languages tend to have fully nominalized relative clauses and no relative pronouns, while other typologically diverse languages tend to have relative clauses which are similar to main or independent clauses. Languages of the Americas, with their rich genetic diversity, have all been under the influence of European languages, whether Spanish, English or Portuguese, a situation that may be expected to have influenced their grammatical patterns. The present volume focuses on two tasks: The first deals with the discussion of functional principles related to relative clause formation: diachrony and paths of grammaticalization, simplicity vs. complexity, and formalization of rules to capture semantic-syntactic correlations. The second provides a typological overview of relative clauses in nine different languages going from north to south in the Americas.

El Creacionismo Vicente Huidobro,Jonathan Simkins,2021-04 Chilean poet Vicente Huidobro's *el creacionismo* (Creationism)-conceived circa 1912-holds that a new object of the imagination is universally translatable because its substance is free of all laws that would otherwise govern its meaning. Transnational, multilingual, extradisciplinary-*el creacionismo* fomented a body of work that remains essential to understanding the poet's visionary, disruptive role in a world increasingly destabilized by the insularity of human technique. *El Creacionismo* collects Jonathan Simkins widely published and acclaimed English translations alongside Huidobro's original Spanish texts in a new bilingual edition, with a foreword by
