Business Modeling David M. Bridgeland, Ron Zahavi, 2008-12-18 As business modeling becomes mainstream, every year more and more companies and government agencies are creating models of their businesses. But creating good business models is not a simple endeavor. Business modeling requires new skills. Written by two business modeling experts, this book shows you how to make your business modeling efforts successful. It provides in-depth coverage of each of the four distinct business modeling disciplines, helping you master them all and understand how to effectively combine them. It also details best practices for working with subject matter experts. And it shows how to develop models, and then analyze, simulate, and deploy them. This is essential, authoritative information that will put you miles ahead of everyone who continues to approach business modeling haphazardly. - Provides in-depth coverage of the four business modeling disciplines: process modeling, motivation modeling, organization modeling, and rules modeling - Offers guidance on how to work effectively with subject matter experts and how to run business modeling workshops - Details today's best practices for building effective business models, and describes common mistakes that should be avoided - Describes standards for each business modeling discipline - Explains how to analyze, simulate, and deploy business models - Includes examples both from the authors' work with clients and from a single running example that spans the book

Large-Scale Scrum Craig Larman, Bas Vodde, 2016-09-30 The Go-To Resource for Large-Scale Organizations to Be Agile Rather than asking, "How can we do agile at scale in our big complex organization?" a different and deeper question is, "How can we have the same simple structure that Scrum offers for the organization, and be agile at scale rather than do agile?" This profound insight is at the heart of LeSS (Large-Scale Scrum). In *Large-Scale Scrum: More with LeSS*, Craig Larman and Bas Vodde have distilled over a decade of experience in large-scale LeSS adoptions towards a simpler organization that delivers more flexibility with less complexity, more value with less waste, and more purpose with less prescription. Targeted to anyone involved in large-scale development, *Large-Scale Scrum: More with LeSS*, offers straight-to-the-point guides for how to be agile at scale, with LeSS. It will clearly guide you to Adopt LeSS Structure a large development organization for customer value Clarify the role of management and Scrum Master Define what your product is, and why Be a great Product Owner Work with multiple whole-product focused feature teams in one Sprint that produces a shippable product Coordinate

Intervening and Changing Jaap Boonstra, Leon de Caluwe, 2007-04-30 Presenting new thinking in organizational psychology from the Netherlands, *Intervening and Changing* is a guide to applying global thinking and democratic values to achieve innovation. Expertly steered by Jaap Boonstra and Leon de Caluwe, it explores tensions and paradoxes in the field of organizational change and presents interventions based in social interaction theory. Its vision is of people collaborating, making sense of their work and living situations and developing collaborative action for breakthrough innovation will be a source of inspiration for any manager, consultant or change agent.

Leveraging Data Science for Global Health Leo Anthony Celi, Maimuna S. Majumder, Patricia Ordóñez, Juan Sebastian Osorio, Kenneth E. Paik, Melek Somai, 2020-07-31 This open access book explores ways to leverage information technology and machine learning to combat disease and promote health, especially in resource-constrained settings. It focuses on digital disease surveillance through the application of machine learning to non-traditional data sources. Developing countries are uniquely prone to large-scale emerging infectious disease outbreaks due to disruption of ecosystems, civil unrest, and poor healthcare infrastructure – and without comprehensive surveillance, delays in outbreak identification, resource deployment, and case management can be catastrophic. In combination with context-informed analytics, students will learn how non-traditional digital disease data sources – including news media, social media, Google Trends, and Google Street View – can fill critical knowledge gaps and help inform on-the-ground decision-making when formal surveillance systems are insufficient.

Business Dynamics: Systems Thinking and Modeling for a Complex World with CD-ROM John Sterman, 2000-02-23

Today's leading authority on the subject of this text is the author, MIT Standish Professor of Management and Director of the System Dynamics Group, John D. Sterman. Sterman's objective is to explain, in a true textbook format, what system dynamics is, and how it can be successfully applied to solve business and organizational problems. System dynamics is both a currently utilized approach to organizational problem solving at the professional level, and a field of study in business, engineering, and social and physical sciences.

Systems Archetypes I Daniel H. Kim, 1992

Dealing with Real-World Complexity Mark Hürlimann, 2009-04-09 Based on policy makers' limitations in solving real-life problems and the fact that information is rarely available in a pure quantitative form, enhancements and new approaches to remedy this are proposed by Mark Hürlimann. He introduces simple and more sophisticated static and dynamic methods to analyze complex topics. In addition a semi-quantitative approach is presented that integrates quantitative and qualitative variables in a feedback system. The author, finally, illustrates on the basis of a case study the advantages and limitations of the various approaches in a didactically sound and easily understandable way.

Place to Space Peter Weill, Michael Vitale, 2001-05-28 Place to Space is the essential e-business playbook that will give leaders the insight and confidence they need to operate successfully in both place and space. The book explains how traditional companies can adapt their bricks-and-mortar legacies to complement and bolster their online ventures. Based on extensive research into dozens of e-business initiatives, this book provides the first systematic, practical analysis of eight viable e-business models; an adaptable hybrid model for competing against online pure plays; and revolutionary schematic tools for analyzing current business models and evaluating promising new web initiatives. Through illuminating case studies of Lonely Planet, General Electric, CDNow, Reuters, and others, the authors show how each model works in practice--from how it makes money to the core competencies and critical factors required to implement it.

Seeing the Forest for the Trees Dennis Sherwood, 2011-03-30 Systems thinking can help you tame the complexity of real-world problems by providing a structured way of balancing a broad, overall view with the selection of the right level of detail, truly allowing you to see the forest for the trees. Only by taking a broad view can we avoid the twin dangers of a silo mentality--in which a fix 'here' simply shifts the problem to 'there', and organisational myopia--in which a fix 'now' gives rise to a much bigger problem to fix 'then'. *Seeing the Forest for the Trees* will give you all the tools and techniques you need, with many practical examples as diverse as managing a busy back office, negotiating an outsourcing deal and formulating business strategy.

System Dynamics Bilash Kanti Bala, Fatimah Mohamed Arshad, Kusairi Mohd Noh, 2016-10-28 This book covers the broad spectrum of system dynamics methodologies for the modelling and simulation of complex systems: systems thinking, causal diagrams, systems structure of stock and flow diagrams, parameter estimation and tests for confidence building in system dynamics models. It includes a comprehensive review of model validation and policy design and provides a practical presentation of system dynamics modelling. It also offers numerous worked-out examples and case studies in diverse fields using STELLA and VENSIM. The system dynamics methodologies presented here can be applied to nearly all areas of research and planning, and the simulations provided make the complicated issues more easily understandable. *System Dynamics: Modelling and Simulation* is an essential system dynamics and systems engineering textbook for undergraduate and graduate courses. It also offers an excellent reference guide for managers in industry and policy planners who wish to use modelling and simulation to manage complex systems more effectively, as well as researchers in the fields of modelling and simulation-based systems thinking.

The Wisdom of Teams Jon R. Katzenbach, Douglas K. Smith, 2015-09-22 The definitive classic on high-performance teams *The Wisdom of Teams* is the definitive work on how to create high-performance teams in any organization. Having sold nearly a half million copies and been translated into more than fifteen languages, the authors' clarion call that teams should be the basic unit of organization for most businesses has permanently shaped the way companies reach the highest levels of

performance. Using engaging case studies and testimonials from both successful and failed teams—ranging from Fortune 500 companies to the U.S. Army to high school sports—the authors explain the dynamics of teams both in great detail and with a broad view. Their conclusions and prescriptions span the familiar to the counterintuitive: • Commitment to performance goals and common purpose is more important to team success than team building. • Opportunities for teams exist in all parts of the organization. • Real teams are the most successful spearheads of change at all levels. • Working in teams naturally integrates performance and learning. • Team “endings” can be as important to manage as team “beginnings.” Wisdom lies in recognizing a team’s unique potential to deliver results and in understanding its many benefits—development of individual members, team accomplishments, and stronger companywide performance. Katzenbach and Smith’s comprehensive classic is the essential guide to unlocking the potential of teams in your organization.

Decision Making in Systems Engineering and Management Patrick J. Driscoll, Gregory S. Parnell, Dale L. Henderson, 2022-10-25 DECISION MAKING IN SYSTEMS ENGINEERING AND MANAGEMENT A thoroughly updated overview of systems engineering management and decision making In the newly revised third edition of Decision Making in Systems Engineering and Management, the authors deliver a comprehensive and authoritative overview of the systems decision process, systems thinking, and qualitative and quantitative multi-criteria value modeling directly supporting decision making throughout the system lifecycle. This book offers readers major new updates that cover recently developed system modeling and analysis techniques and quantitative and qualitative approaches in the field, including effective techniques for addressing uncertainty. In addition to Excel, six new open-source software applications have been added to illustrate key topics, including SIPmath Modeler Tools, Cambridge Advanced Modeller, SystemiTool2.0, and Gephi 0.9.2. The authors have reshaped the book’s organization and presentation to better support educators engaged in remote learning. New appendices have been added to present extensions for a new realization analysis technique and getting started steps for each of the major software applications. Updated illustrative examples support modern system decision making skills and highlight applications in hardware, organizations, policy, logistic supply chains, and architecture. Readers will also find: Thorough introductions to working with systems, the systems engineering perspective, and systems thinking In-depth presentations of applied systems thinking, including holism, element dependencies, expansive and contractive thinking, and concepts of structure, classification, and boundaries Comprehensive explorations of system representations leading to analysis In-depth discussions of supporting system decisions, including the system decision process (SDP), tradespace methods, multi-criteria value modeling, working with stakeholders, and the system environment Perfect for undergraduate and graduate students studying systems engineering and systems engineering management, Decision Making in Systems Engineering and Management will also earn a place in the libraries of practicing system engineers and researchers with an interest in the topic.

Community Based System Dynamics Peter S. Hovmand, 2013-11-09 *Community Based System Dynamics* introduces researchers and practitioners to the design and application of participatory systems modeling with diverse communities. The book bridges community-based participatory research methods and rigorous computational modeling approaches to understanding communities as complex systems. It emphasizes the importance of community involvement both to understand the underlying system and to aid in implementation. Comprehensive in its scope, the volume includes topics that span the entire process of participatory systems modeling, from the initial engagement and conceptualization of community issues to model building, analysis, and project evaluation. *Community Based System Dynamics* is a highly valuable resource for anyone interested in helping to advance social justice using system dynamics, community involvement, and group model building, and helping to make communities a better place.

Feedback Thought in Social Science and Systems Theory George P. Richardson, 1999 This is a study of a method of thinking in the social sciences known as the loop concept. This concept underlies the notions of feedback and circular causality. The author attempts to illuminate the significance of classical and contemporary feedback thinking in social science and social policy.

Ethnography in Action Jean J. Schensul, Margaret D. LeCompte, 2016-01-14 This is Book 7 of 7 in the *Ethnographer's Toolkit, Second Edition*. In *Ethnography in Action*, Jean J. Schensul and Margaret D. LeCompte explore how ethnographic research intersects with and enhances numerous areas of practice. Schensul and LeCompte ground this book in the understanding that all applied or practice-oriented social science must be collaborative to be effective. Showing how informal and formal ethnographic methods and knowledge contribute to the arenas in which ethnographers work, the authors cover both the typical practice settings raised in earlier books in the series and introduce two emerging arenas of concern: long-term fieldwork and participatory action research. With its methodological focus and skillful integration of guidelines, checklists, examples, and resources, Book 7 offers a unique guide to the practice of mixed methods ethnography over time and with community involvement. Other books in the set: Book 1: *Designing and Conducting Ethnographic Research: An Introduction, Second Edition* by Margaret D. LeCompte and Jean J. Schensul 9780759118690 Book 2: *Initiating Ethnographic Research: A Mixed Methods Approach* by Stephen L. Schensul, Jean J. Schensul, and Margaret D. Introduction to Systems Thinking Daniel H. Kim, 1999

The Future of Cities and Regions Liliana Bazzanella, Luca Caneparo, Franco Corsico, Giuseppe Roccasalva, 2012-03-22 This guide for tomorrow's urban practitioner systematically explains fifteen best practices across three continents; it explores questions of broad interest for designing and planning the future of cities and regions. Key questions addressed are: Is simulation useful to explore the effects of different design, policy and planning strategies? Which approach will help manage the uncertainties of metropolitan areas both today and tomorrow? What are the strengths and weaknesses of the different simulation practices for city leadership, public and private partnership, and citizen involvement? The book reviews computer models and media, socio-political initiatives, professional practices which help communicating the future effects of different design, political and planning strategies with a wide range of aims: from information, through consultation, towards active participation. These world best practices are considered according to four leading issues for urban and regional development, respectively Simulation, Scenario and Visioning, Government and Governance, and Scale. The book examines the approaches adopted technically and procedurally. The selected knowledge and the innovative tools used in each case study are among the most advanced and up-to-date in the professional and research fields. This volume successfully illustrates these innovative practices and methodologies in a straightforward and accessible way.

Handbook of Systems Thinking Methods Paul M. Salmon, Neville A. Stanton, Guy H. Walker, Adam Hulme, Natassia Goode, Jason Thompson, Gemma J.M. Read, 2022-08-19 The systems thinking philosophy has become popular in human factors and ergonomics and safety science. These methods are being used to understand and resolve complex societal problems in areas such as transport safety, workplace safety, medication error, disaster management, child abuse, financial crises, terrorism, climate change and public health and wellbeing. This handbook presents practical step-by-step guidance for practitioners and researchers wishing to use these methods to tackle complex problems. Each method includes an example case study which demonstrates how the method can be applied and how the results can be interpreted and translated into practical recommendations. The book presents practical guidance on state-of-the-art systems thinking methods and offers case study applications describing systems thinking methods in novel areas. It explains how to translate the outputs of systems thinking methods in practice and introduces systems thinking with an overview of Human Factors and Ergonomics applications. This book will serve as a great reference for students and engineers in the field of systems engineering, complex systems and the design and development of systems, including ergonomics/human factors and systems engineers, designers, architects, industrial engineers, project management engineers, reliability engineers, risk engineers, software engineers and computer engineers.
