Africa in the Indian Ocean Tor Sellström, 2015-05-26 The four sovereign Indian Ocean states of Comoros, Madagascar, Mauritius and Seychelles, the two French overseas departments of Mayotte and Reunion, as well as the British colony of BIOT (Chagos), all form part of Africa. As insular nations and territories in an increasingly globalized, militarized and largely unregulated ocean, they face particular challenges. Commonly overlooked in the fields of African and international studies, this text traces the islands' history and explores their diverse contemporary social, political and economic trajectories. From human settlement and slavery to conflict resolution and piracy, the relations with continental Africa and the African Union feature prominently. Richly sourced, this comprehensive and up-to-date introduction to Africa's Indian Ocean islands covers a significant lacuna.

La regina e l'imperatrice Alessandra Necci, 2022-06-28T00:00:00+02:00 Quando Maria Teresa succede al padre Carlo VI d'Asburgo, l'ultimo erede maschio di un casato che aveva prosperato per secoli, molti temono che una donna avvenente, giovane e inesperta non riesca a sopportare il gravoso fardello della corona. Armata di umiltà e determinazione, si rivelerà invece una sovrana illuminata, una «madre della patria» amorevole e attenta alle esigenze dei suoi sudditi, un'imperatrice propensa alla mediazione, ma capace anche di fermezza e pragmatismo, che attuerà una serie di importanti riforme. Costretta in nome della ragion di Stato a dare in sposa l'appena quattordicenne Maria Antonietta al delfino di Francia per

rinsaldare l'alleanza fra Vienna e Versailles, Maria Teresa non smetterà mai di preoccuparsi della condotta di questa sua giovane figlia dal carattere vivace, incline alla leggerezza e allo sfarzo. Soprannominata dai suoi nemici «l'Austriaca», considerata il simbolo di un potere opprimente, Maria Antonietta si attira l'odio del popolo per gli errori della prima fase di regno e per la violenta campagna denigratoria di cui è vittima. Dimostra grande fermezza e coraggio negli anni della Rivoluzione e, nell'ottobre del 1793, dopo aver sfilato con estrema dignità tra la folla inferocita, viene ghigliottinata. Un racconto appassionante che restituisce spessore alle due donne più influenti nell'Europa del Settecento, un'indagine coinvolgente su due distinte e opposte interpretazioni del potere, che getta nuova luce sulla difficile transizione tra il crepuscolo dell'assolutismo monarchico e l'affermazione, anche sanguinosa, delle nuove istanze democratiche.

Facing Hydrometeorological Extreme Events Isabelle La Jeunesse, Corinne Larrue, 2019-11-04 Provides an understanding of the relationship between social-ecological systems and multilevel governance so that readers can properly deal with hydrometeorological extreme events and hazards Based on field investigations from EU research projects, this book is the first to devote itself to scientific and policy-related knowledge concerning climate change-induced extreme events. It depicts national and international strategies, as well as tools used to improve multilevel governance for the management of hydrometeorological risks. It also demonstrates how these strategies play out over different scales of the decision-making processes. *Facing Hydrometeorological Extreme Events: A Governance Issue* offers comprehensive coverage of such events as floods, droughts, coastal storms, and wind storms. It showcases real-life success stories of multilevel governance and highlights the individuals involved and the resources mobilized in the decision-making processes. The book starts by presenting a synthesis of hydrometeorological extreme events and their impacts on society. It then demonstrates how societies are organizing themselves to face these extreme events, focusing on the strategies of integration of risk management in governance and public policy. In addition, it includes the results of several EU-funded projects such as CLIMB, STARFLOOD, and INTERREG IVB project DROP. The first book dedicated to hydrometeorological extreme events governance based on field investigations from EU research projects Offers a “multi-hazards” approach—mixing policy, governance, and field investigations’ main outputs Features the results of EU-funded projects addressing hydrometeorological extreme events Part of the Hydrometeorological Extreme Events series *Facing Hydrometeorological Extreme Events* is an ideal book for upper-graduate students, postgraduates, researchers, scientists, and policy-makers working in the field.

Geoheritage of the Middle Atlas (Morocco) Khaoula Baadi, 2023-06-16 This book is a condensed summary of a broad spectrum of the geological heritage of the Middle Atlas. It has the particularity of proposing an in-depth synthesis and a critical review of the geoheritage of the region. The book addresses the issues related to geoheritage and methodologies for the selection, inventory, assessment and preservation of geosites. It reviews the state of the art of geoheritage in Morocco,

particularly in the Middle Atlas, in order to identify geosites with rare and unique geological features. The book presents a detailed study of lithostratigraphic and sedimentological heritage as geosites witnessing at different spatial and temporal scales the evolution and the stratigraphic, sedimentological and paleogeographic history of the Middle Atlas range. It also presents the paleontological heritage of vertebrates by reviewing the discoveries of paleontological sites and their risks in order to present its conservation plans. It also addresses the hydric and fluvial heritage by presenting the potential of water resources and the impact of climate change on the latter. Furthermore, it highlights the karst heritage by exposing an inventory of exo- and endokarst geosites in order to emphasize some unique sites on a national and African scale as well as revealing the underground biodiversity related to this heritage. Finally, it proposes a presentation of the volcanic heritage in order to assess the volcanic geosites that testify to the strombolian, phreatomagmatic and Hawaiian dynamism of the region. The book is mainly intended for researchers, geologists and specialists of the Moroccan Middle Atlas region wishing to acquire a broad multidisciplinary or even transdisciplinary knowledge. It will also be accessible to a non-initiated public, interested in the richness of the Moroccan geoheritage, as well as to Moroccan territorial authorities (High Commission for Water and Forests, Ministry of Tourism, National Institute of Archaeology and Heritage Sciences, etc.) who can benefit from it in the perspective of their strategies of preservation of the national geological heritage. This work will be an example for geoscientists, on an African scale, of a valorization of territorial geological heritage.

Dialogues in Music Therapy and Music Neuroscience: Collaborative Understanding Driving Clinical Advances Julian O'Kelly, Jörg C. Fachner, Mari Tervaniemi, 2017-06-30 Music is a complex, dynamic stimulus with an unparalleled ability to stimulate a global network of neural activity involved in attention, emotion, memory, communication, motor co-ordination and cognition. As such, it provides neuroscience with a highly effective tool to develop our understanding of brain function, connectivity and plasticity. Increasingly sophisticated neuroimaging technologies have enabled the expanding field of music

neuroscience to reveal how musical experience, perception and cognition may support neuroplasticity, with important implications for the rehabilitation and assessment of those with acquired brain injuries and neurodegenerative conditions. Other studies have indicated the potential for music to support arousal, attention and emotional regulation, suggesting therapeutic applications for conditions including ADHD, PTSD, autism, learning disorders and mood disorders. In common with neuroscience, the music therapy profession has advanced significantly in the past 20 years. Various interventions designed to address functional deficits and health care needs have been developed, alongside standardised behavioural assessments. Historically, music therapy has drawn its evidence base from a number of contrasting theoretical frameworks. Clinicians are now turning to neuroscience, which offers a unifying knowledge base and frame of reference to understand and measure therapeutic interventions from a biomedical perspective. Conversely, neuroscience is becoming more enriched by learning about the neural effects of 'real world' clinical applications in music therapy. While neuroscientific imaging methods may provide biomarking evidence for the efficacy of music therapy interventions it also offers important tools to describe time-locked interactive therapy processes and feeds into the emerging field of social neuroscience. Music therapy is bound to the process of creating and experiencing music together in improvisation, listening and reflection. Thus the situated cognition and experience of music developing over time and in differing contexts is of interest in time series data. We encouraged researchers to submit papers illustrating the mutual benefits of dialogue between music therapy and other disciplines important to this field, particularly neuroscience, neurophysiology, and neuropsychology. The current eBook consists of the peer reviewed responses to our call for papers.

Large-scale dam removal and ecosystem restoration Rebecca McCaffery, Laura Soissons, Jeffrey J. Duda, Jean-Marc Roussel, 2024-09-20 Rivers are vital ecosystems that support aquatic and terrestrial biodiversity and several ecosystem services, including food, water, culture, and recreation. After centuries of building dams on rivers across the world, dam removal projects are now on the rise due to obsolescence, reservoir sedimentation, insufficient return on investment, or river restoration and conservation priorities. Most dam removal projects have focused on smaller structures (< 10 m in structural height), but larger structures have also started to be removed in increasing numbers as practitioners, river managers, conservationists, and the public have gained more experience with the practice. Recent estimates suggest that only a small fraction of dam removals have been scientifically studied, and include mostly small dams and short time scales. Documenting the long-term ecological outcomes of large dam removal (i.e. >10 m tall) represents a new frontier in dam removal research: projects are more recent and provide an opportunity to understand the complex ecological changes that occur with these transformative restoration projects. Here, we aim to collate a diverse array of papers on long-term dam removal research projects involving larger dams (>10 m) to synthesize the issues, outcomes, tools, and experimental designs used to study large dam removal projects from physical, biological, and ecological perspectives. With this collection, we aim to showcase

diverse global projects on ecosystem responses to large dam removal; collect perspectives from different disciplines, fields, and geographies; and synthesize the current state of knowledge in this area. We expect that this Research Topic will be informative to ongoing, long-term ecological restoration and monitoring projects related to dam removal as well as to upcoming large dam removal projects. We welcome contributions from all disciplines addressing the physical, ecological, and ecosystem responses to large-scale dam removal. Contributions could include original research in a specific discipline or area, case studies, or synthesis papers that address one or more of these topics in a transdisciplinary approach. Contributors could address any of the following major topics as related to outcomes of large dam removal, alone or in combination: Freshwater, estuarine, and marine aquatic biota; River and reservoir geomorphology; Terrestrial and riparian vegetation; Wildlife; Sedimentation; and Modelling. We would like contributors to highlight key results in their area of study, cross-disciplinary insights, and lessons learned that could inform ongoing monitoring and research efforts in current projects as well as upcoming large dam removals.

The Spatial and Economic Transformation of Mountain Regions Manfred Perlik, 2019-01-03 Mountain regions are subject to a unique set of economic pressures: they act as collective enterprises which have to valorize rare resources, such as spectacular landscapes. While primarily rural in nature, they often border large cities, and the development of industries such as hydroelectric power and the rapid development of tourism can bring about sweeping socio-economic change and vast demographic alterations. *The Spatial and Economic Transformation of Mountain Regions* describes the socio-economic changes and spatial impacts of the last four decades, with the transformation of mountain areas held up as an example. Much of the real-world context draws on the Alps, spanning as they do the significant economies of France, Italy, Germany, Switzerland, and Austria. Chapters address academic discourse on regional development in these mountain areas and suggest alternative approaches to the liberal-productivist societal model. This book will be essential reading for professionals, institutions, and NGOs searching for counter-models to the existing marketing approaches for peripheral areas. It will also be of interest to students of regional development, economic geography, environmental studies, and industrial economics.

Slavery by Another Name Douglas A. Blackmon, 2012-10-04 A Pulitzer Prize-winning history of the mistreatment of black Americans. In this 'precise and eloquent work' - as described in its Pulitzer Prize citation - Douglas A. Blackmon brings to light one of the most shameful chapters in American history - an 'Age of Neoslavery' that thrived in the aftermath of the Civil War through the dawn of World War II. Using a vast record of original documents and personal narratives, Blackmon unearths the lost stories of slaves and their descendants who journeyed into freedom after the Emancipation Proclamation and then back into the shadow of involuntary servitude thereafter. By turns moving, sobering and shocking, this unprecedented account reveals these stories, the companies that profited the most from neoslavery, and the insidious legacy

of racism that reverberates today.

Tectonic Evolution, Collision, and Seismicity of Southwest Asia Rasoul Sorkhabi,2017-12-21 Southwest Asia is one of the most remarkable regions on Earth in terms of active faulting and folding, large-magnitude earthquakes, volcanic landscapes, petroliferous foreland basins, historical civilizations as well as geologic outcrops that display the protracted and complex 540 m.y. stratigraphic record of Earth's Phanerozoic Era. Emerged from the birth and demise of the Paleo-Tethys and Neo-Tethys oceans, southwest Asia is currently the locus of ongoing tectonic collision between the Eurasia-Arabia continental plates. The region is characterized by the high plateaus of Iran and Anatolia fringed by the lofty ranges of Zagros, Alborz, Caucasus, Taurus, and Pontic mountains; the region also includes the strategic marine domains of the Persian Gulf, Gulf of Oman, Caspian, and Mediterranean. This 19-chapter volume, published in honor of Manuel Berberian, a preeminent geologist from the region, brings together a wealth of new data, analyses, and frontier research on the geologic evolution, collisional tectonics, active deformation, and historical and modern seismicity of key areas in southwest Asia.

The Oxford Handbook of the Ends of Empire Martin Thomas,Andrew Stuart Thompson,2018 The Oxford Handbook of the Ends of Empire offers the most comprehensive treatment of the causes, course, and consequences of the collapse of empires in the twentieth century. The volume's contributors convey the global reach of decolonization, analysing the ways in which European, Asian, and African empires disintegrated over the past century.

Encyclopedia of Caves and Karst Science John Gunn,2004-08-02 The Encyclopedia of Caves and Karst Science contains 350 alphabetically arranged entries. The topics include cave and karst geoscience, cave archaeology and human use of caves, art in caves, hydrology and groundwater, cave and karst history, and conservation and management. The Encyclopedia is extensively illustrated with photographs, maps, diagrams, and tables, and has thematic content lists and a comprehensive index to facilitate searching and browsing.

Wetlands and Human Health C Max Finlayson,Pierre Horwitz,Philip Weinstein,2015-08-03 The book addresses the interactions between wetlands and human health and well-being. A key feature is the linking of ecology-health and the targeting of practitioners and researchers. The environmental health problems of the 21st Century cannot be addressed by the traditional tools of ecologists or epidemiologists working in their respective disciplinary silos; this is clear from the emergence and re-emergence of public health and human well-being problems such as cholera pandemics, mosquito borne disease, and episodic events and disasters (e.g. hurricanes). To tackle these problems requires genuine cross-disciplinary collaboration; a key finding of the recently concluded Millennium Ecosystem Assessment when looking at human well-being

and ecosystem health. This book brings the disciplines of ecology and health sciences closer to such a synthesis for researchers, teachers and policy makers interested in or needing information to manage wetlands and human health and well-being issues.
