Attitudes, Behavior, and Social Context Deborah J. Terry, Michael A. Hogg, 1999-11-01 The reasons why people do not always act in accord with their attitudes has been the focus of much social psychological research, as have the factors that account for why people change their attitudes and are persuaded by such influences as the media. There is strong support for the view that attitude-behavior consistency and persuasion cannot be well understood without reference to the wider social context in which we live. Although attitudes are held by individuals, they are social products to the extent that they are influenced by social norms and the expectations of others. This book brings together an international group of researchers discussing private and public selves and their interaction through attitudes and behavior. The effects of the social context on attitude-behavior relations and persuasion is the central theme of this book, which--in its combination of theoretical exposition, critique, and empirical research--should be of interest to both basic and applied social psychologists.

The Psychology of Attitudes and Attitude Change Greg Maio, Geoffrey Haddock, 2009-12-18 'An outstanding new text. Written in an engaging style it provides an impressive review of both basic and applied work. Classic studies are interwoven with important recent findings to provide a scholarly overview of this exciting area of social psychology' - Professor Mark Conner, University of Leeds 'Maio and Haddock provide an excellent up-to-date summary of the key findings in the field in their very readable new text' - Richard E. Petty, Ohio State University People spontaneously evaluate things. We form opinions on topics such as war and climate change, on other people such as our work colleagues and celebrities, and on behaviours such as sexual activity and waste recycling. At times, these attitudes can be the focus of bitter debate, and as humans we naturally crave to understand attitudes and how to change them. In four sections and 11 chapters, Greg Maio and Geoffrey Haddock describe how scientific methods have been used to better understand attitudes and how they change. The first section looks at what attitudes are and why they are important. The second section examines the ability of attitudes to predict behaviour. From there, the authors consider how attitudes are formed and changed. Finally, they present a variety of major issues for understanding internal (such as, neurological) and external (such as, culture) influences on attitude, along with unresolved questions. With the aid of a few helpful metaphors, the text provides readers with a grasp of the fundamental concepts for understanding attitudes and an appreciation of the scientific challenges that lie ahead. The Psychology of Attitudes and Attitude Change is for students in psychology, health psychology, communication, business and political

science. It is a core text for courses in the psychology of attitudes, persuasion, and social influence and a key resource for modules in social cognition and introductory social psychology

Attitude Strength Richard E. Petty, Jon A. Krosnick, 2014-01-14 Social psychologists have long recognized the possibility that attitudes might differ from one another in terms of their strength, but only recently had the profound implications of this view been explored. Yet because investigators in the area were pursuing interesting but independent programs of research exploring different aspects of strength, there was little articulation of assumptions underlying the work, and little effort to establish a common research agenda. The goals of this book are to highlight these assumptions, to review the discoveries this work has produced, and to suggest directions for future work in the area. The chapter authors include individuals who have made significant contributions to the published literature and represent a diversity of perspectives on the topic. In addition to providing an overview of the broad area of attitude strength, particular chapters deal in depth with specific features of attitudes related to strength and integrate the diverse bodies of relevant theory and empirical evidence. The book will be of interest to graduate students initiating work on attitudes as well as to longstanding scholars in the field. Because of the many potential directions for application of work on attitude strength to amelioration of social problems, the book will be valuable to scholars in various applied disciplines such as political science, marketing, sociology, public opinion, and others studying attitudinal phenomena.

Knowledge Architectures Denise Bedford, 2020-12-30 Knowledge Architectures reviews traditional approaches to managing information and explains why they need to adapt to support 21st-century information management and discovery. Exploring the rapidly changing environment in which information is being managed and accessed, the book considers how to use knowledge architectures, the basic structures and designs that underlie all of the parts of an effective information system, to best advantage. Drawing on 40 years of work with a variety of organizations, Bedford explains that failure to understand the structure behind any given system can be the difference between an effective solution and a significant and

costly failure. Demonstrating that the information user environment has shifted significantly in the past 20 years, the book explains that end users now expect designs and behaviors that are much closer to the way they think, work, and act. Acknowledging how important it is that those responsible for developing an information or knowledge management system understand knowledge structures, the book goes beyond a traditional library science perspective and uses case studies to help translate the abstract and theoretical to the practical and concrete. Explaining the structures in a simple and intuitive way and providing examples that clearly illustrate the challenges faced by a range of different organizations, Knowledge Architectures is essential reading for those studying and working in library and information science, data science, systems development, database design, and search system architecture and engineering.

The Handbook of Attitudes Dolores Albarracín, Blair T. Johnson, Mark P. Zanna, 2014-04-04 This new handbook presents, synthesizes, and integrates the existing knowledge of methods, theories, and data in attitudes. The editors' goal is to promote an understanding of the broader principles underlying attitudes across several disciplines. Divided into three parts: one on definitions and methods; another on the relations of attitudes with beliefs, behavior, and affect; and a final one that integrates these relations into the broader areas of cognitive processes, communication and persuasion, social influence, and applications, the handbook also features an innovative chapter on implicit versus explicit attitudes. With contributions from the top specialists, this handbook features unique collaborations between researchers, some who have never before worked together. Every writer was encouraged to work from as unbiased a perspective as possible. A must have for researchers in the areas of social, political, health, clinical, counseling, and consumer psychology, marketing, and communication, the handbook will also serve as an excellent reference for advanced courses on attitudes in a variety of departments.

Methods, Theories, and Empirical Applications in the Social Sciences Samuel Salzborn, Eldad Davidov, Jost Reinecke, 2012-03-30 The volume addresses major features in empirical social research from methodological and theoretical perspectives. Prominent researchers discuss central problems in empirical social research in a theory-driven way from political science, sociological or social-psychological points of view. These contributions focus on a renewed discussion of foundations together with innovative and open research questions or interdisciplinary research perspectives.

Social Psychology Thomas Heinzen, Wind Goodfriend, 2017-11-30 Discover social psychology's relevance to your life with *Social Psychology*, a new introduction to the field from award-winning teacher-researchers Tom Heinzen and Wind Goodfriend. The authors present social psychology as an evolving, science-driven conversation. Every chapter builds on core questions central to scientific inquiry, while a methods-in-context approach cultivates psychological literacy. Heinzen and Goodfriend draw students in by weaving stories drawn from their own personal experiences with compelling examples from popular culture, all carefully placed in historical context. Because application is key, the book concludes with eight mini-

chapters on topics including behavioral economics, environmental sustainability, law and the courtroom, positive psychology, and more. Students will become active participants in the social psychology dialogue, finding their fascination with the field and realizing its significance in their daily lives and future careers.

Mindshaping Tadeusz Wieslaw Zawidzki, 2013-05-10 A proposal that human social cognition would not have evolved without mechanisms and practices that shape minds in ways that make them easier to interpret. In this novel account of distinctively human social cognition, Tadeusz Zawidzki argues that the key distinction between human and nonhuman social cognition consists in our complex, diverse, and flexible capacities to shape each other's minds in ways that make them easier to interpret. Zawidzki proposes that such mindshaping—which takes the form of capacities and practices such as sophisticated imitation, pedagogy, conformity to norms, and narrative self-constitution—is the most important component of human social cognition. Without it, he argues, none of the other components of what he terms the human sociocognitive syndrome, including sophisticated language, cooperation, and sophisticated mindreading, would be possible. Challenging the dominant view that sophisticated mindreading—especially propositional attitude attribution—is the key evolutionary innovation behind distinctively human social cognition, Zawidzki contends that the capacity to attribute such mental states depends on the evolution of mindshaping practices. Propositional attitude attribution, he argues, is likely to be unreliable unless most of us are shaped to have similar kinds of propositional attitudes in similar circumstances. Motivations to mindshape, selected to make sophisticated cooperation possible, combine with low-level mindreading abilities that we share with nonhuman species to make it easier for humans to interpret and anticipate each other's behavior. Eventually, this led, in human prehistory, to the capacity to attribute full-blown propositional attitudes accurately—a capacity that is parasitic, in phylogeny and today, on prior capacities to shape minds. Bringing together findings from developmental psychology, comparative psychology, evolutionary psychology, and philosophy of psychology, Zawidzki offers a strikingly original framework for understanding human social cognition.

Attitudes and Attitude Change William D. Crano, Radmila Prislin, 2011-07-21 This volume assembles a distinguished group of international scholars whose chapters on classic and emerging issues in research on attitudes provide an excellent introduction for advanced undergraduates and graduate students. The book's chapters cover all of the most critical features of attitude measurement, attitude development, and attitude change. Implicit and explicit approaches to measurement and conceptualization are featured throughout, making this one of the most up-to-date treatments of attitude theory and research currently available. The comprehensive coverage of the central topics in this important field provides a useful text in advanced courses on persuasion or attitude change.

Message—Attitude—Behavior Relationship Donald P. Cushman, Robert D. McPhee, 2013-10-22 Message-Attitude-

Behavior Relationship explores the relationship between messages, attitudes, and behaviors. Emphasis is on alternative conceptualizations of various message strategies, cognitive and information processing models, and their relevance to the study of behavior. Innovative mathematical models are discussed to highlight stochastic and deterministic mathematical operators case in coextensive, sequential, and multidimensional arrays of systems state. Message strategies are cast in terms of social, psychological, and information processing constructs. Comprised of 11 chapters, this book begins with an overview of the research tradition dealing with messages, attitudes, and behaviors. The following chapters provide in-depth justification, supported by data analysis, for the use of various theoretical and methodological approaches to the message-attitude-behavior relationship. An atomized, stochastic model of the behavioral effects of message campaigns is then described, along with the foundations of cognitive theory and a constructivist analysis of the relationship between attitudes and behavior. An information-processing explanation of attitude-behavior inconsistency is also outlined. The link between mental states and social action is analyzed with respect to Ludwig Wittgenstein's 1953 book *Philosophical Investigations*. This monograph should be a valuable resource for both social and behavioral scientists engaged in behavioral research.

The Handbook of Attitudes, Volume 1: Basic Principles Dolores Albarracín, Blair T. Johnson, 2018-10-10 Attitudes are evaluations of people, places, things, and ideas. They help us to navigate through a complex world. They provide guidance for decisions about which products to buy, how to travel to work, or where to go on vacation. They color our perceptions of others. Carefully crafted interventions can change attitudes and behavior. Yet, attitudes, beliefs, and behavior are often formed and changed in casual social exchanges. The mere perception that other people favor something, say, rich people, may be sufficient to make another person favor it. People's own actions also influence their attitudes, such that they adjust to be more supportive of the actions. People's belief systems even change to align with and support their preferences, which at its extreme is a form of denial for which people lack awareness. These two volumes provide authoritative, critical surveys of theory and research about attitudes, beliefs, persuasion, and behavior from key authors in these areas. The first volume covers theoretical notions about attitudes, the beliefs and behaviors to which they are linked, and the degree to which they are held outside of awareness. It also discusses motivational and cultural determinants of attitudes, influences of attitudes on behavior, and communication and persuasion. The second volume covers applications to measurement, behavior prediction, and interventions in the areas of cancer, HIV, substance use, diet, and exercise, as well as in politics, intergroup relations, aggression, migrations, advertising, accounting, education, and the environment.

The Dynamics of Persuasion Richard M. Perloff, 2016-12-19 *The Dynamics of Persuasion* has been a staple resource for teaching persuasion for nearly two decades. Author Richard M. Perloff speaks to students in a style that is engaging and informational, explaining key theories and research as well as providing timely and relevant examples. The companion website includes materials for both students and instructors and expanding the pedagogical utilities. The sixth edition

includes: updated theoretical and applied research in a variety of areas, including framing, inoculation, and self-affirmation; new studies of health campaigns; expanded coverage of social media marketing; enhanced discussion of the Elaboration Likelihood Model in light of continued research and new applications to everyday persuasion. The fundamentals of the book – emphasis on theory, clear-cut explanation of findings, in-depth discussion of persuasion processes and effects, and easy-to-follow real-world applications – continue in the sixth edition.

Persuasive Technology Wijnand IJsselsteijn, Yvonne de Kort, Cees Midden, Berry Eggen, Elise van den Hoven, 2006-05-05 This book constitutes the refereed proceedings of the First International Conference on Persuasive Technology for human well-being, PERSUASIVE 2006. The 31 revised full papers presented together with 1 introductory paper are organized in topical sections on psychological principles of persuasive technology, persuasive technology: theory and modelling, design, applications and evaluations, ethics of persuasive technology persuasive gerontechnology, and ambient intelligence and persuasive technology.

Strategic Political Communication Karen S. Johnson-Cartee, Gary Copeland, 2004 To become a successful political communicator (and a savvy political consumer), it is essential to know the elements of social influence, what works, and why. Strategic Political Communication provides an introduction to persuasion, social influence, and propaganda tactics, focusing on political communication. This rich, well-documented work looks at the power of language, the importance of targeting a specific audience, and the significance of interpersonal relationships, among other key issues. It further examines propaganda in order to understand how communicators can best exercise influence in contemporary society.

Persuasive Communication James Brian Stiff, Paul A. Mongeau, 2002-10-18 This popular text provides a comprehensive introduction to the study of persuasive messages and their effects. Concepts and methods from communication and social psychology are seamlessly integrated to give students a solid grasp of foundational issues in persuasion research, the core features of persuasive transactions, and major models of persuasive communication. Distinguished by its clear organization and wealth of concrete examples, this is an ideal text for advanced undergraduate- and graduate-level courses for students with a basic understanding of quantitative research methods.

Reframing the Attitude-Behavior Debate James A. Kitts, 1997-10 This thesis proposes a reconceptualization of the attitude as a multidimensional latent process, which may be unstable across situations, individuals, and time. A review of the literature in light of this reconceptualization reveals aspects of the survey situation that may systematically influence measures of attitudes, behaviors, and social norms. This suggests that contradictory findings regarding attitude-behavior consistency may be partly due to specific inadequacies of conventional measures. A reflexive research strategy is proposed, which supplements survey methods with both quantitative and qualitative assessments of measurement validity. This strategy is applied in a case study of attitudes, norms, and diet in five vegetarian student cooperative houses. Analyses test the

sufficiency of a revised Model of Reasoned Action for predicting members' intentions to abstain from eating beef, chicken, or fish. Throughout the analyses, several methodological issues are explored in an effort to optimize validity: elicitation and fixed response items, generality of referents and expected consequences, subjective and objective measures of social norms, allowance for composite behavioral intentions, and specification of regression models. Implications for future theoretical research and the design of reflexive behavioral interventions are discussed.

The Science of Attitudes Joel Cooper, Shane Blackman, Kyle Keller, 2015-09-16 The Science of Attitudes is the first book to integrate classic and modern research in the field of attitudes at a scholarly level. Designed primarily for advanced undergraduates and graduate students, the presentation of research will also be useful for current scholars in all disciplines who are interested in how attitudes are formed and changed. The treatment of attitudes is both thorough and unique, taking a historical approach while simultaneously highlighting contemporary views and controversies. The book traces attitudes research from the inception of scientific study following World War II to the issues and methods of research that are prominent features of today's research. Researchers in the field of attitudes will be particularly interested in classic and modern research on the organization, structure, strength and function of attitudes. Researchers in the field of persuasion will be particularly interested in work on attitude change focusing on propositional and associative learning, metacognition and dynamic theories of dissonance, balance and reactance. The book is designed to present the integration of the properties of the attitude with the dynamic considerations of attitude change. The Science of Attitudes is also the first book on attitudes to devote entire chapters to work on implicit measurements, resistance to persuasion, and social neuroscience.

Parenting Matters National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Supporting the Parents of Young Children, 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is

increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.
