*The Structuring of Experience* I. Uzgiris,2012-12-06 The articles which make up this book were all expressly written to honor a remarkable man and a remarkable psychologist, Joseph McVicker Hunt, on the occasion of his 70th birthday. The contributors to this volume, with the exception of Hunt's teacher, J. P. Guilford, are students and colleagues of Hunt's whose intellectual and professional paths have crossed his in some significant way. In terms of content, the contributions collectively range across many of the conventional boundaries that demarcate the territories into which psychological subject-matter has been divided. In so doing, they remain faithful to the man they honor, for whom such boundaries have had, at best, only provisional reality. Yet as the introductory chapter attempts to make clear, there is a unifying theme that lies behind the apparent diversity of Hunt's work. While we wished to mark Hunt's specific contributions to the diverse areas represented in this book, we also hoped to capture the unity of viewpoint that ties them together.

**New Perspectives on Faking in Personality Assessment** Carolyn MacCann, Richard Roberts, 2012 Contributors consider what it means to fake a personality assessment, why and how people try to obtain particular scores on personality tests, and what types of tests people can successfully manipulate. The authors present and discuss the usefulness of a range of traditional and cutting-edge methods for detecting and controlling the practice of faking.

**The Development of Attention** J.T. Enns, 1990-08-23 This volume presents an up-to-date review of developmental aspects of human attention by leading researchers and theorists. The papers included in the first section consider the ways in which newborns are pretuned to visual, auditory, linguistic, and social features of their environment, as well as how selectivity to these features changes in the first year of life. The following section examines properties of the visual and auditory world that are attention-getting for children. Developmental increases in capacity and strategy are also examined in this section through the study of perception, memory, problem-solving and language. Section III explores several ways in which selective processing can fail in development (e.g. autism, hyperactivity, and psychopathy) while Section IV reports on those aspects of selectivity that are lost (and preserved) in the aging process.

**The Neuropsychology of Attention** Ronald A. Cohen, 2013-12-11 It has been 15 years since the original publication of Neuropsychology of Attention. At the time of its publication, attention was a construct that had long been of theoretical interest in the field of psychology and was receiving increased research by cognitive scientists. Yet, attention was typically viewed as a nuisance variable; a factor that needed to be accounted for when assessing brain function, but of limited importance in its own right. There is a need for a new edition of this book within Neuropsychology to present an updated and integrated review of what is known about attention, the disorders that affect it, and approaches to its clinical assessment and treatment. Such a book will provide perspectives for experimental neuropsychological study of attention and also provide clinicians with insights on how to approach this neuropsychological domain.

**Applied Psychology** Graham C. Davey, 2011-05-16 For a significant portion of psychology students, their reason for choosing an undergraduate degree in psychology is their interest in applied psychology and a desire to use psychological knowledge to help solve personal and social problems. With this in mind, this textbook has been designed to satisfy these needs for applied psychology teaching at all undergraduate levels. Applied Psychology is designed to introduce students to the main areas of applied psychology (Clinical Psychology, Health Psychology, Educational Psychology, Occupational

Psychology, Forensic Psychology, Sports & Exercise Psychology, Counselling Psychology and Teaching Psychology) from UK, European and international perspectives. It also introduces the core psychological knowledge that underpins these applied and professional areas. As a result, students learn core knowledge from the five main areas of psychology, as well as acquiring a thorough grounding in how this knowledge is applied, and the professional issues associated with that application. Highlights include a broad range of teaching and learning features designed to help the student learn and the teacher teach. These include: Focus Points, Colour Illustrations, Activity Boxes, Research Methods, Case Histories, Self-Test and Essay Questions, Learning Outcomes and Section Summaries, a Glossary as well as Links to Journal Articles and Further Reading. The chapters on Counselling Psychology and Teaching Psychology are available online via the Student Companion Site at: <http://tinyurl.com/c3zvtvj> The text is written to be accessible to Level 1 Introductory Psychology students, and also to provide the core knowledge and professional information that students at Levels 2 and 3 would require.

*Dual-Process Theories of the Social Mind* Jeffrey W. Sherman, Bertram Gawronski, Yaacov Trope, 2014-05-01 This volume provides an authoritative synthesis of a dynamic, influential area of psychological research. Leading investigators address all aspects of dual-process theories: their core assumptions, conceptual foundations, and applications to a wide range of social phenomena. In 38 chapters, the volume addresses the pivotal role of automatic and controlled processes in attitudes and evaluation; social perception; thinking and reasoning; self-regulation; and the interplay of affect, cognition, and motivation. Current empirical and methodological developments are described. Critiques of the duality approach are explored and important questions for future research identified--

**The Oxford Handbook of Media Psychology** Karen E. Dill, Karen Dill-Shackleford, 2013 The Oxford Handbook of Media Psychology explores facets of human behaviour, thoughts, and feelings experienced in the context of media use and creation.

**Free Will, Causality, and Neuroscience**, 2019-10-21 Neuroscientists often consider free will to be an illusion. Contrary to this hypothesis, the contributions to this volume show that recent developments in neuroscience can also support the existence of free will. Firstly, the possibility of intentional consciousness is studied. Secondly, Libet's experiments are discussed from this new perspective. Thirdly, the relationship between free will, causality and language is analyzed. This approach suggests that language grants the human brain a possibility to articulate a meaningful personal life. Therefore, human beings can escape strict biological determinism. Contributing author Sofia Bonicalzi has received funding from the European Union's Framework Programme for Research and Innovation Horizon 2020 (2014-2020) under the Marie Skłodowska-Curie Grant Agreement No. 754388 (LMUResearchFellows) and from LMUexcellent, funded by the Federal Ministry of Education and Research (BMBF) and the Free State of Bavaria under the Excellence Strategy of the German Federal Government and the Länder.

*Recent Developments in Alcoholism* Marc Galanter, 2013-11-22 From the President of the Research Society on Alcoholism In recent years, increasingly convincing evidence in support of a biobehavioral conceptual model of the etiology of alcoholism has emerged. In this model, the disorder is perceived as arising from the interaction of genetic/biological vulnerability and psychosocial risk. Drinking, or alcohol-seeking, is a metric trait. Alcoholism, which is a state of abnormally intense alcohol-seeking behavior that, over time, leads to the alcohol dependence syndrome, lies at the extreme, high end of this quantitative measure. Metric traits are influenced by multiple genes; the extent of genetic loading of biological risk for alcoholism would be different in different individuals. Added to this kind of variability is the wide range of options for exposure to the psychosocial risk factors of heavy drinking provided by modern society. Further, environmental provocation also changes when life events change. It is not surprising, therefore, from the combination of the kinds of genetic and environmental variability described above that there is a wide array of patterns of expression of the disorder alcoholism, referred to by some as alcoholisms. In the search for understanding of underlying mechanisms and rational bases for potential therapy, it is important to focus our attention on the final common pathway of this disorder, alcohol-seeking behavior. This series, ever since its beginning in 1983, has been sensitive to the complexities of the interaction between biological and psychosocial risk factors in alcoholism.

*The Psychology of Social Conflict and Aggression* Joseph P. Forgas, Arie W. Kruglanski, Kipling D. Williams, 2011-05-09 This book provides an up-to-date integration of some of the most recent developments in social psychological research on social conflict and aggression, one of the most perennial and puzzling topics in all of psychology. It offers an informative, scholarly yet readable overview of recent advances in research on the nature, antecedents, management, and consequences of interpersonal and intergroup conflict and aggression. The chapters share a broad integrative orientation, and argue that human conflict is best understood through the careful analysis of the cognitive, affective, and motivational processes of those involved in conflict situations, supplemented by a broadly-based understanding of the evolutionary, biological, as well as the social and cultural contexts within which social conflict occurs.

Cognition and the Symbolic Processes Robert R. Hoffman, David S. Palermo, 2014-01-14 This volume is a festschrift dedicated to James J. Jenkins, a pioneer in many areas of experimental psychology. It has three major goals: to provide a forum for debate on current theoretical issues in cognitive psychology, to capture the state of the art in reviews of research methods and results, and to generate ideas for new research directions and methodologies. Contributors -- including Jenkins' former students and present colleagues -- ponder fundamental questions such as: \* How do people learn to read? \* What happens during the processes of speech perception? \* How do people acquire problem solving skills? \* How do cognitive and motor skills develop and integrate with one another? Many chapters focus specifically on ecological and applied cognitive psychology. Specific topics covered include visual and speech perception, language, memory, motivation, child development,

problem solving, and pedagogy.

**American Journal of Mental Retardation** ,1988 Includes the association's conference proceedings and addresses.

Social Cognition Gordon B. Moskowitz,2005-01-01 An ideal text for undergraduate- and graduate-level courses, this accessible yet authoritative volume examines how people come to know themselves and understand the behavior of others. Core social-psychological questions are addressed as students gain an understanding of the mental processes involved in perceiving, attending to, remembering, thinking about, and responding to the people in our social world. Particular attention is given to how we know what we know: the often hidden ways in which our perceptions are shaped by contextual factors and personal and cultural biases. While the text's coverage is sophisticated and comprehensive, synthesizing decades of research in this dynamic field, every chapter brings theories and findings down to earth with lively, easy-to-grasp examples.

**Psychology** Graham C. Davey,2018-12-17 Psychology continues to be one of the most popular fields of study at colleges and universities the world over, and Psychology offers a comprehensive overview of the historical, methodological, and conceptual core of modern psychology. This textbook enables students to gain foundational knowledge of psychological investigation, exploring both the biological basis and mental processes underlying our thoughts and behaviours. Officially endorsed by the British Psychological Society, this book covers topics ranging from biological, cognitive and developmental psychology to the psychology of social interactions, psychopathology and mental health treatments. Each chapter provides detailed examination of essential topics, chapter summaries, real-world case studies, descriptions of research methods, and interactive learning activities to strengthen student comprehension and retention. This textbook offers a wealth of supplementary material for instructors of introductory and advanced undergraduate courses in psychology. An instructor's manual includes lecture outlines, classroom discussion topics, homework assignments and test bank questions, while online access to additional digital content provides a complete resource to facilitate effective teaching and learning.

**Health Behavior Change** Andrew Prestwich,Jared Kenworthy,Mark Conner,2017-10-16 We live in an era where people live longer but also suffer from more chronic illnesses. Yet these two issues present not only significant challenges to healthcare professionals, but also governments seeking cost-effective ways to manage their health and social care budgets. Encouraging people to live healthier lifestyles is, therefore, a fundamental issue for both those at risk as well as for society as a whole. This is the first textbook to present not only the theoretical foundations that explain health behavior change but also the methods by which change can be assessed and the practical contexts where theory and method can be applied. Covering behavior change aimed at improving health as well as preventing disease, it places behavior change firmly in context with the social and demographic changes which make it such an urgent issue, from the rise in levels of obesity to an aging population. The book considers the role of individuals but also other important influences on health behavior, such as the environment in which people live, public policy and technological changes. Fostering a critical perspective, and including case studies in

each chapter with key issues highlighted throughout, the book provides a complete understanding of health behavior change, from its theoretical building blocks to the practical challenges of developing and testing an intervention. It will be essential reading for students and researchers of health psychology, public health and social work, as well as any professional working in this important area.

The Neuropsychology of Individual Differences Lawrence C. Hartlage, Cathy F. Telzrow, 2013-11-11 The Neuropsychology of Individual Differences: A Developmental Perspective was designed to simplify the complexities and subtleties of neurologically based differences in human beings. By conceptualizing and presenting subject matter in a developmental sequence, we hoped to emphasize the inseparable union between the science of neuropsychology and the study of human behavior. Following a brief introductory chapter, the volume opens with chapters concerning critical preliminary questions, such as establishing a foundation and rationale for a neuropsychological basis for individual differences and consideration of important methodological issues. It proceeds with discussions of the role of neuropsychology in the individual's efforts to organize the world via such basic means as perception and temperament. Three chapters follow that discuss individual differences in higher cortical functions: cognitive ability, language, and learning. Neuropsychological differences between the sexes and in the expression of psychopathological and neurological conditions comprise the topics for the next three chapters. The final topical chapter provides a discussion of rehabilitation of neurological disorders in children, and the volume concludes with a synthesis of all contributions.

*Dual-process Theories in Social Psychology* Shelly Chaiken, Yaacov Trope, 1999-02-19 This informative volume presents the first comprehensive review of research and theory on dual-process models of social information processing. These models distinguish between qualitatively different modes of information processing in making decisions and solving problems (e.g., associative versus rule-based, controlled versus uncontrolled, and affective versus cognitive modes). Leading contributors review the basic assumptions of these approaches and review the ways they have been applied and tested in such areas as attitudes, stereotyping, person perception, memory, and judgment. Also examined are the relationships between different sets of processing modes, the factors that determine their utilization, and how they work in combination to affect responses to social information.
