*Blended Learning: Convergence between Technology and Pedagogy* Antonio Víctor Martín-García, 2020-05-18 This book focuses on essential aspects of the theoretical foundations that support blended learning (BL) as a teaching training modality in tertiary education. Analyzing the changes in the world of education that lead to new ways of thinking and learning, it redefines the concept of blended learning at a time of constant growth in many universities around the world. This involves a shared reflection on the role of technology in the current university teacher education programs, as well as on the role that pedagogy plays in increasingly technology-driven contexts. Furthermore, the book presents pedagogical approaches to guide university professors in the design and implementation of blended learning courses. To this end, it describes some of the major models and approaches to BL instructional design, and examines issues related to the quality of BL training and the indicators to measure it, in order to identify those models that contribute to a better understanding of the dimensions that increase its effectiveness.

**The End of the Story** Liliana Heker, 2012-05-22 Liliana Heker is one of the most remarkable voices of the Argentinean generation after Borges ... her fiction chronicles the small tragedies that take place within the vast tragedy of our history. A universal and indispensable writer. - Alberto Manguel When Diana Glass witnesses Leonora's abduction from a street in Buenos Aires, she despairs that her friend has joined the ranks of los desaparecidos, the missing ones. She begins to write the story of their friendship, but certain memories, details, and whispered allegations about Leonora's fate consistently intrude. Leonora was born to drink life down to the bottom of the glass. But, Diana wonders, is that necessarily a virtue? Gripping, intelligent, and intricately structured, Liliana Heker's novel of an unstable revolutionary pasionaria has inflamed readers across Latin America. *The End of the Story* is a shocking study of the psychology of torture, and a tragic portrait of Argentina's Dirty War.

*The Historical Development of the Calculus* C.H.Jr. Edwards, 2012-12-06 The calculus has served for three centuries as the principal quantitative language of Western science. In the course of its genesis and evolution some of the most fundamental problems of mathematics were first confronted and, through the persistent labors of successive generations, finally resolved. Therefore, the historical development of the calculus holds a special interest for anyone who appreciates the value of a historical perspective in teaching, learning, and enjoying mathematics and its applications. My goal in writing this book was to present an account of this development that is accessible, not solely to students of the history of mathematics, but to the wider mathematical community for which my exposition is more specifically intended, including those who study, teach, and use calculus. The scope of this account can be delineated partly by comparison with previous works in the same general area. M. E. Baron's *The Origins of the Infinitesimal Calculus* (1969) provides an informative and reliable treatment of the precalculus period up to, but not including (in any detail), the time of Newton and Leibniz, just when the interest and pace of the story begin to quicken and intensify. C. B. Boyer's well-known book (1949, 1959 reprint) met well the goals its author set for it, but it was more appropriately titled in its original edition—*The Concepts of the Calculus* than in its reprinting.

**Bebés brillantes: Matemáticas II para bebés** Juan Carlos Cárdenas Meza, 2022-12-05 Después de más de 2500 kits vendidos, y con los resultados tan sorprendentes que tuvieron todos los niños que recibieron el Sistema LAT de estimulación neuronal activa, tenemos que pensar en el futuro que les espera y en cómo podemos contribuir para facilitarles la vida sin ningún esfuerzo, más que cinco minutos diarios aplicando el método. Hemos descubierto después de 12 años de aplicar el sistema LAT a bebés y niños, que los patrones de recepción de información y de expresión de ideas son mucho más

desarrollados. La forma de expresión es una de las características que ayudan a medir el coeficiente intelectual de una persona. Cuando vemos a nuestros niños hablando con un vocabulario más extenso y con frases más maduras para la edad que tienen, entendemos que la aplicación del 'Sistema LAT' ayudó a desarrollar estas características. El patrón de resultados obtenidos con el Sistema LAT se repite en todos los bebés, sin importar el tipo de estimulación temprana que hayan recibido. Potencializa cualquier característica obtenida con otra- estimulación y además genera sus patrones de comportamiento particulares. Los resultados obtenidos en estos 12 años y los testimonios de padres y madres acerca de los resultados con sus bebés -hoy ya niños grandes-, nos permiten concluir que el 'Sistema LAT de estimulación neuronal activa funciona imperceptiblemente en el cerebro, pero muestra a una persona con capacidades intelectuales superiores al estándar. Por eso debemos darle la importancia que se merece. Si practicamos este sistema con nuestros hijos les estaremos dando el soporte básico para potenciar sus capacidades. Necesitamos que todos los bebés tengan la posibilidad de ser más inteligentes en las próximas generaciones, que sean capaces de solucionar las circunstancias que se presenten, así como también puedan aportar a la construcción de una mejor sociedad en el mundo entero.

**Dialogue and Learning in Mathematics Education** Helle Alrø, Ole Skovsmose, 2006-01-02 Dialogue and Learning in Mathematics Education is concerned with communication in mathematics class-rooms. In a series of empirical studies of project work, we follow students' inquiry cooperation as well as students' obstructions to inquiry cooperation. Both are considered important for a theory of learning mathematics. Special attention is paid to the notions of 'dialogue' and 'critique'. A central idea is that 'dialogue' supports 'critical learning of mathematics'. The link between dialogue and critique is developed further by including the notions of 'intention' and 'reflection'. Thus a theory of learning mathematics is developed which is resonant with critical mathematics education.
