The House of the Pain of Others Julián Herbert, 2019-04-16 A brilliant work of historical excavation with profound echoes in an age redolent with violence and xenophobia. Early in the twentieth century, amid the myths of progress and modernity that underpinned Mexico's ruling party, some three hundred Chinese immigrants—close to half of the Cantonese residents of the newly founded city of Torreón—were massacred over the course of three days. It is considered the largest slaughter of Chinese people in the history of the Americas, but more than a century later, the facts continue to be elusive, mistaken, and repressed. “And what do you know about the Chinese people who were killed here?” Julián Herbert asks anyone who will listen. An exorcism of persistent and discomfiting ghosts, *The House of the Pain of Others* attempts a reckoning with the 1911 massacre. Looping, digressive, and cinematic, Herbert blends reportage, personal reflection, essay, and academic research to portray the historical context as well as the lives of the perpetrators and victims of the “small genocide.” This brilliant historical excavation echoes profoundly in an age redolent with violence and xenophobia.

Membrane Computing Marian Gheorghe, Grzegorz Rozenberg, Arto Salomaa, Petr Sosík, Claudio Zandron, 2014-12-16 This book constitutes the thoroughly refereed post-conference proceedings of the 15th International Conference on Membrane Computing, CMC 2014, held in Prague, Czech Republic, in August 2014. The 19 revised selected papers presented together with 5 invited lectures were carefully reviewed and selected from 24 papers presented at the conference. In addition, two papers selected from the 22 papers presented at the regional version of CMC, the Asian Conference on Membrane Computing, ACMC 2014, held in Coimbatore, India, are included. The papers cover a wide range of topics in the area of membrane computing, which is an area of computer science aiming to abstract computing ideas and models from the structure and the functioning of living cells, as well as from the way the cells are organized in tissues or higher order structures.

Real-life Applications with Membrane Computing Gexiang Zhang, Mario J. Pérez-Jiménez, Marian Gheorghe, 2017-04-05 This book thoroughly investigates the underlying theoretical basis of membrane computing models, and reveals their latest applications. In addition, to date there have been no illustrative case studies or complex real-life applications that capitalize on the full potential of the sophisticated membrane systems computational apparatus; gaps that this book remedies. By studying various complex applications - including engineering optimization, power systems fault

diagnosis, mobile robot controller design, and complex biological systems involving data modeling and process interactions – the book also extends the capabilities of membrane systems models with features such as formal verification techniques, evolutionary approaches, and fuzzy reasoning methods. As such, the book offers a comprehensive and up-to-date guide for all researchers, PhDs and undergraduate students in the fields of computer science, engineering and the bio-sciences who are interested in the applications of natural computing models.

Beyond Artificial Intelligence Jozef Kelemen, Jan Romportl, Eva Zackova, 2012-10-20 Products of modern artificial intelligence (AI) have mostly been formed by the views, opinions and goals of the “insiders”, i.e. people usually with engineering background who are driven by the force that can be metaphorically described as the pursuit of the craft of Hephaestus. However, since the present-day technology allows for tighter and tighter mergence of the “natural” everyday human life with machines of immense complexity, the responsible reaction of the scientific community should be based on cautious reflection of what really lies beyond AI, i.e. on the frontiers where the tumultuous ever-growing and ever-changing cloud of AI touches the rest of the world. The chapters of this boo are based on the selected subset of the presentations that were delivered by their respective authors at the conference “Beyond AI: Interdisciplinary Aspects of Artificial Intelligence” held in Pilsen in December 2011. From its very definition, the reflection of the phenomena that lie beyond AI must be inherently interdisciplinary. And so is this book: all the authors took part in a mutual transdisciplinary dialogue after explaining their views on AI not only to a narrow selection of their usual close peers with the same specialisation, but to a much broader audience of various experts from AI engineering, natural sciences, humanities and philosophy. The chapters of this book thus reflect results of such a dialogue.

Computational Methods in Systems Biology David Gilbert, Monika Heiner, 2012-09-28 This book constitutes the thoroughly refereed conference proceedings of the 10th International Conference on Computational Methods in Systems Biology, CMSB 2012, held in London, UK, during October 3-5, 2012. The 17 revised full papers and 8 flash posters presented together with the summaries of 3 invited papers were carefully reviewed and selected from 62 submissions. The papers cover the analysis of biological systems, networks, and data ranging from intercellular to multiscale. Topics included high-performance computing, and for the first time papers on synthetic biology.

Oaxaca in Motion Iván Sandoval-Cervantes, 2022-10-11 Migration is typically seen as a transnational phenomenon, but it happens within borders, too. *Oaxaca in Motion* documents a revealing irony in the latter sort: internal migration often is global in character, motivated by foreign affairs and international economic integration, and it is no less transformative than its cross-border analogue. Iván Sandoval-Cervantes spent nearly two years observing and interviewing migrants from the rural Oaxacan town of Santa Ana Zegache. Many women from the area travel to Mexico City to work as domestics, and men are encouraged to join the Mexican military to fight the US-instigated “war on drugs” or else leave their fields to labor in

industries serving global supply chains. Placing these moves in their historical and cultural context, Sandoval-Cervantes discovers that migrants' experiences dramatically alter their conceptions of gender, upsetting their traditional notions of masculinity and femininity. And some migrants bring their revised views with them when they return home, influencing their families and community of origin. Comparing Oaxacans moving within Mexico to those living along the US West Coast, Sandoval-Cervantes clearly demonstrates the multiplicity of answers to the question, "Who is a migrant?"

The Little Old Lady Killer Susana Vargas Cervantes, 2019-08-20 The surprising true story of Mexico's hunt, arrest, and conviction of its first female serial killer For three years, amid widespread public outrage, police in Mexico City struggled to uncover the identity of the killer responsible for the ghastly deaths of forty elderly women, many of whom had been strangled in their homes with a stethoscope by someone posing as a government nurse. When Juana Barraza Samperio, a female professional wrestler known as la Dama del Silencio (the Lady of Silence), was arrested—and eventually sentenced to 759 years in prison—for her crimes as the Mataviejitas (the little old lady killer), her case disrupted traditional narratives about gender, criminality, and victimhood in the popular and criminological imagination. Marshaling ten years of research, and one of the only interviews that Juana Barraza Samperio has given while in prison, Susana Vargas Cervantes deconstructs this uniquely provocative story. She focuses, in particular, on the complex, gendered aspects of the case, asking: Who is a killer? Barraza—with her "manly" features and strength, her career as a masked wrestler in lucha libre, and her violent crimes—is presented, here, as a study in gender deviance, a disruption of what scholars call *mexicanidad*, or the masculine notion of what it means to be Mexican. Cervantes also challenges our conception of victimhood—specifically, who "counts" as a victim. *The Little Old Lady Killer* presents a fascinating analysis of what serial killing—often considered "killing for the pleasure of killing"—represents to us.

Handbook Of Unconventional Computing (In 2 Volumes) Andrew Adamatzky, 2021-08-18 Did you know that computation can be implemented with cytoskeleton networks, chemical reactions, liquid marbles, plants, polymers and dozens of other living and inanimate substrates? Do you know what is reversible computing or a DNA microscopy? Are you aware that randomness aids computation? Would you like to make logical circuits from enzymatic reactions? Have you ever tried to implement digital logic with Minecraft? Do you know that eroding sandstones can compute too? This volume reviews most of the key attempts in coming up with an alternative way of computation. In doing so, the authors show that we do not need computers to compute and we do not need computation to infer. It invites readers to rethink the computer and computing, and appeals to computer scientists, mathematicians, physicists and philosophers. The topics are presented in a lively and easily accessible manner and make for ideal supplementary reading across a broad range of subjects. Related Link(s)

Rainbow of Computer Science Cristian S. Calude, Grzegorz Rozenberg, Arto Salomaa, 2011-03-22 This volume is dedicated to Hermann Maurer on his 70th birthday. Topics include Automata, Formal Languages and Computability to

various aspects of the Practice of Computer Science, as well as from Algorithmics to Learning.

Alien Nation Elliott Young, 2014 Young traces the pivotal century of Chinese migration to the Americas, beginning with the 1840s at the start of the 'coolie' trade and ending during World War II. This book is the first transnational history of Chinese migration to the Americas. By focusing on the fluidity and complexity of border crossings throughout the Western Hemisphere, Young shows us how Chinese migrants constructed alternative communities and identities through these transnational pathways--Provided by publisher.

The Magical State Fernando Coronil, 1997-11-10 In 1935, after the death of dictator General Juan Vicente Gómez, Venezuela consolidated its position as the world's major oil exporter and began to establish what today is South America's longest-lasting democratic regime. Endowed with the power of state oil wealth, successive presidents appeared as transcendent figures who could magically transform Venezuela into a modern nation. During the 1974-78 oil boom, dazzling development projects promised finally to effect this transformation. Yet now the state must struggle to appease its foreign creditors, counter a declining economy, and contain a discontented citizenry. In critical dialogue with contemporary social theory, Fernando Coronil examines key transformations in Venezuela's polity, culture, and economy, recasting theories of development and highlighting the relevance of these processes for other postcolonial nations. The result is a timely and compelling historical ethnography of political power at the cutting edge of interdisciplinary reflections on modernity and the state.

Handbook of Caribbean Economies Robert E. Looney, 2020-11-10 This volume aims to illustrate the uniqueness of the economies of the countries and territories of the Caribbean as well as the similarities they share with other regions. While most countries in the region share many of the characteristics of middle-income countries, theirs is a matter of extremes. Their generally small size suggests a fragility not found elsewhere. While much of the world is beginning to feel some effects of climate change, the Caribbean is ground zero. These factors suggest a difficult road ahead, but the chapters presented in this volume aim to help to spur the search for creative solutions to the region's problems. The chapters, written by expert contributors, examine the Caribbean economies from several perspectives. Many break new ground in questioning past policy mindsets, while developing new approaches to many of the traditional constraints limiting growth in the region. The volume is organized in four sections. Part I examines commonalities, including issues surrounding small economies, tourism, climate change and energy security. Part II looks at obstacles to sustained progress, for example debt, natural disasters and

crime. In Part III chapters consider the specific role of external influences, including the USA and the European Union, the People's Republic of China, as well as regional co-operation. The volume concludes in Part IV with country case studies intended to provide a sense of the diversity that runs through the region.

Hyperborder Fernando Romero, 2008 Roving vigilantes, fear-mongering politicians, hysterical pundits, and the looming shadow of a seven hundred-mile-long fence: the US-Mexican border is one of the most complex and dynamic areas on the planet today. Hyperborder provides the most nuanced portrait yet of this dynamic region. Author Fernando Romero presents a multidisciplinary perspective informed by interviews with numerous academics, researchers, and organizations. Provocatively designed in the style of other kinetic large-scale studies like Rem Koolhaas's *Content* and Bruce Mau's *Massive Change*, Hyperborder is an exhaustively researched report from the front lines of the border debate.

The Derveni Papyrus Marco Antonio Santamaría Álvarez, 2018-11-26 The Derveni Papyrus: Unearthing Ancient Mysteries is devoted to this fascinating and challenging document, discovered in 1962 in a tomb in Derveni, near Thessaloniki, and dated c. 340-320 BCE. It contains a text probably written at the end of 5th c. BCE, which after some reflections on minor divinities and unusual cults, comments upon a poem attributed to Orpheus from an allegorical and philosophical perspective. This volume focuses on the restoration and conservation of the papyrus, the ideas of the anonymous author about Erinyes and daimons, the quoted Orphic poem in comparison with Hesiod's *Theogony* and Parmenides' poem, the exegetical approach of the commentator, his cosmogonic system, his attitude regarding mystery cults and his peculiar theology.

The Top Books of the Year Marco Antonio Perez Jimenez The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous compelling novels captivating the hearts of readers worldwide. Lets delve into the realm of top-selling books, exploring the fascinating narratives that have captivated audiences this year. Marco Antonio Perez Jimenez : Colleen Hoover's "It Ends with Us" This touching tale of love, loss, and resilience has gripped readers with its raw and emotional exploration of domestic abuse. Hoover skillfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This intriguing historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids compelling storytelling and compelling characters transport readers to a bygone

era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens weaves a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of captivating stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a exceptional and suspenseful novel that will keep you guessing until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
