Tecnología de proceso y transformación de materiales Maria Nuria Salán Ballesteros, 2009-07 Los principales objetivos de esta asignatura son la introducción de los distintos tipos de materiales de aplicación industrial, el establecimiento de relaciones estructura-propiedades de cada grupo de materiales y la descripción de los principales procesos de transformación que se desarrollan industrialmente para convertir un material en un componente final. Para ello, se parte del conocimiento básico de la estructura de los materiales de ingeniería (metales, materiales cerámicos, polímeros y compuestos), así como del comportamiento y las características que se asocian con dicha estructura. Se describen los procesos de transformación de componentes, cuya selección se justifica sobre la base de las características de los materiales que se han de transformar, y se indican algunos de los tratamientos más comunes que permiten modificar el comportamiento macroscópico de un componente para adecuarlo a las solicitaciones requeridas. En la descripción de los procesos, se introducen los criterios a considerar a la hora de realizar la selección del material más adecuado, en la medida de lo posible.

La técnica moderna Luis Humberto Hernández M, 2020-10-14 En este libro realizamos una serie de reflexiones en torno a los rasgos epistemológicos básicos de la técnica moderna, expresión que describe la forma que tomó el fenómeno técnico después de tejer un número complejo de relaciones con la ciencia moderna. Más concretamente, hemos caracterizado dos clases de conocimiento asociados a la técnica tal como se expresa en nuestra época: el saber qué y el saber cómo. En realidad, tanto la ciencia como la técnica modernas producen estas dos clases de conocimiento, y las complejas relaciones que establecen mutuamente, desde el punto de vista epistemológico, están asociadas a las relaciones, a un nivel más amplio, que se tejen entre estas dos actividades. Para dar cuenta del papel que desempeñan estas dos formas de conocimiento, es

necesario reconocer la complejidad de la técnica moderna, resultado de la enorme difusión que ha alcanzado en los diversos ámbitos de la cultura moderna. Una forma de enfatizar y caracterizar esta complejidad es empleando el concepto de sistema. Los sistemas técnicos contienen técnicas que hacen referencia a conocimientos científicos y prácticos o habilidades comunes a todos los operadores que hacen parte de tales sistemas. Dichos conocimientos están asociados al saber qué y al saber cómo. Estos conocimientos juegan una función significativa en los diversos componentes que hacen parte de los sistemas técnicos: los agentes intencionales, los objetivos, las acciones de manipulación, que hacen parte de las relaciones de transformación; y las relaciones de gestión.

Metrología y ensayos MILLAN GOMEZ, SIMON, 2012-06-01 El Real Decreto 1398/2007, de 29 de octubre, establece el título de Técnico en Mecanizado y fija sus enseñanzas mínimas. En este libro se desarrollan los contenidos curriculares correspondientes al módulo profesional de Metrología y ensayos, dirigido a los alumnos que cursan el Ciclo Formativo de grado medio de Mecanizado, perteneciente a la familia profesional de Fabricación Mecánica. El enfoque elegido es claramente práctico y el lenguaje empleado, sencillo y directo, para que la asimilación y el aprendizaje de los contenidos sean lo más efectivos posibles. Además, las explicaciones teóricas de cada unidad se apoyan en numerosas fotografías, figuras y esquemas que facilitan la comprensión del texto. Todas estas características hacen del libro una perfecta herramienta de enseñanza y aprendizaje para el módulo de Metrología y ensayos.
