How Television Invented New Media Sheila C. Murphy, 2011-03-17 Now if I just remembered where I put that original TV play device--the universal remote control . . . Television is a global industry, a medium of representation, an architectural component of space, and a nearly universal frame of reference for viewers. Yet it is also an abstraction and an often misunderstood science whose critical influence on the development, history, and diffusion of new media has been both minimized and overlooked. *How Television Invented New Media* adjusts the picture of television culturally while providing a corrective history of new media studies itself. Personal computers, video game systems, even iPods and the Internet built upon and borrowed from television to become viable forms. The earliest personal computers, disguised as video games using TV sets as monitors, provided a case study for television's key role in the emergence of digital interactive devices. Sheila C. Murphy analyzes how specific technologies emerge and how representations, from South Park to Dr. Horrible's Sing-Along-Blog, mine the history of television just as they converge with new methods of the making and circulation of images. Past and failed attempts to link television to computers and the Web also indicate how services like Hulu or Netflix On-Demand can give rise to a new era for entertainment and program viewing online. In these concrete ways, television's role in new and emerging media is solidified and finally recognized.

Blue Skies Patrick Parsons, 2008-04-05 Cable television is arguably the dominant mass media technology in the U.S. today. *Blue Skies* traces its history in detail, depicting the important events and people that shaped its development, from the precursors of cable TV in the 1920s and '30s to the first community antenna systems in the 1950s, and from the creation of the national satellite-distributed cable networks in the 1970s to the current incarnation of info-structure that dominates our lives. Author Patrick Parsons also considers the ways that economics, public perception, public policy, entrepreneurial personalities, the social construction of the possibilities of cable, and simple chance all influenced the development of cable TV. Since the 1960s, one of the pervasive visions of cable has been of a ubiquitous, flexible, interactive communications system capable of providing news, information, entertainment, diverse local programming, and even social services. That set of utopian hopes became known as the Blue Sky vision of cable television, from which the book takes its title. Thoroughly documented and carefully researched, yet lively, occasionally humorous, and consistently insightful, *Blue Skies* is the genealogy of our media society.

That's the Way It Is Charles L. Ponce de Leon,2016-09-09 Ever since Newton Minow taught us sophisticates to bemoan the descent of television into a vast wasteland, the dyspeptic chorus of jeremiahs who insist that television news in particular has gone from gold to dross gets noisier and noisier. Charles Ponce de Leon says here, in effect, that this is misleading, if not simply fatuous. He argues in this well-paced, lively, readable book that TV news has changed in response to broader changes in the TV industry and American culture. It is pointless to bewail its decline. That s the Way It Is gives us the very first history of American television news, spanning more than six decades, from Camel News Caravan to Countdown with Keith Oberman and The Daily Show. Starting in the latter 1940s, television news featured a succession of broadcasters who became household names, even presences: Eric Sevareid, Walter Cronkite, David Brinkley, Peter Jennings, Brian Williams, Katie Couric, and, with cable expansion, people like Glenn Beck, Jon Stewart, and Bill O Reilly. But behind the scenes, the parallel story is just as interesting, involving executives, producers, and journalists who were responsible for the field s most important innovations. Included with mainstream network news programs is an engaging treatment of news magazines like 60 Minutes and 20/20, as well as morning news shows like Today and Good Morning America. Ponce de Leon gives ample attention to the establishment of cable networks (CNN, and the later competitors, Fox News and MSNBC), mixing in colorful anecdotes about the likes of Roger Ailes and Roone Arledge. Frothy features and other kinds of entertainment have been part and parcel of TV news from the start; viewer preferences have always played a role in the evolution of programming, although the disintegration of a national culture since the 1970s means that most of us no longer follow the news as a civic obligation. Throughout, Ponce de Leon places his history in a broader cultural context, emphasizing tensions between the public service mission of TV news and the quest for profitability and broad appeal.

Electronic Inventions and Discoveries G.W.A Drummer,2021-09-17 In a remarkably short time, electronics has penetrated almost every aspect of modern life and the pace of development in the field shows no sign of slackening. One of the first books to cover electronic inventions in depth, *Electronic Inventions and Discoveries: Electronics from Its Earliest Beginnings to the Present Day*, Fourth Edition traces the development of electronics from its earliest beginnings to the present day. Spanning a period of two and a half centuries, the book presents a mini-encyclopedia full of valuable information on practically all inventions in electronics from 1745 to 1996. This fourth edition has been brought up-to-date and made more attractive by a complete redesign while still maintaining the successful features of previous editions. The first nine chapters supply concise yet comprehensive histories of the main areas of the subject. Subsequent chapters provide a list of inventions by subject and succinct descriptions of each invention in date order with over 1,000 references. The book concludes with a list of acronyms and abbreviations, a list of books on inventions and inventors, and a comprehensive index. During his seventy years in the field, the author has collected a variety of published data to form an up-to-date systematic review of the major developments in electronics and the pattern of advances in electronic techniques. The book forms an essential source of reference to practicing engineers wishing to broaden their knowledge. Teachers and students who require a sound background and understanding of electronics will also find the book invaluable. Written in an easily understood largely nontechnical language, this fascinating and authoritative history of electronic developments will be of great interest to electronic hobbyists and general science readers.

All of them are explored in the fascinating *Icons of Invention: The Makers of the Modern World from Gutenberg to Gates*. This in-depth resource tells the stories of 24 of the most influential and well-known inventions of the modern age—and of the individuals most responsible for their

When Women Invented Television Jennifer Keishin Armstrong, 2021-03-23 New and Noteworthy —New York Times Book Review Must-Read Book of March —Entertainment Weekly Best Books of March —HelloGiggles “Leaps at the throat of television history and takes down the patriarchy with its fervent, inspired prose. When Women Invented Television offers

proof that what we watch is a reflection of who we are as a people.” —Nathalia Holt, New York Times–bestselling author of *Rise of the Rocket Girls* New York Times–bestselling author of *Seinfeldia* Jennifer Keishin Armstrong tells the little-known story of four trailblazing women in the early days of television who laid the foundation of the industry we know today. It was the Golden Age of Radio and powerful men were making millions in advertising dollars reaching thousands of listeners every day. When television arrived, few radio moguls were interested in the upstart industry and its tiny production budgets, and expensive television sets were out of reach for most families. But four women—each an independent visionary—saw an opportunity and carved their own paths, and in so doing invented the way we watch tv today. Irna Phillips turned real-life tragedy into daytime serials featuring female dominated casts. Gertrude Berg turned her radio show into a Jewish family comedy that spawned a play, a musical, an advice column, a line of house dresses, and other products. Hazel Scott, already a renowned musician, was the first African American to host a national evening variety program. Betty White became a daytime talk show fan favorite and one of the first women to produce, write, and star in her own show. Together, their stories chronicle a forgotten chapter in the history of television and popular culture. But as the medium became more popular—and lucrative—in the wake of World War II, the House Un-American Activities Committee arose to threaten entertainers, blacklisting many as communist sympathizers. As politics, sexism, racism, anti-Semitism, and money collided, the women who invented television found themselves fighting from the margins, as men took control. But these women were true survivors who never gave up—and thus their legacies remain with us in our television-dominated era. It's time we reclaimed their forgotten histories and the work they did to pioneer the medium that now rules our lives. This amazing and heartbreaking history, illustrated with photos, tells it all for the first time.
