Human Motion Simulation Karim Abdel-Malek, Jasbir Singh Arora, 2013-05-30 Simulate realistic human motion in a virtual world with an optimization-based approach to motion prediction. With this approach, motion is governed by human performance measures, such as speed and energy, which act as objective functions to be optimized. Constraints on joint torques and angles are imposed quite easily. Predicting motion in this way allows one to use avatars to study how and why humans move the way they do, given specific scenarios. It also enables avatars to react to infinitely many scenarios with substantial autonomy. With this approach it is possible to predict dynamic motion without having to integrate equations of motion -- rather than solving equations of motion, this approach solves for a continuous time-dependent curve characterizing joint variables (also called joint profiles) for every degree of freedom. - Introduces rigorous mathematical methods for digital human modelling and simulation - Focuses on understanding and representing spatial relationships (3D) of biomechanics -

Develops an innovative optimization-based approach to predicting human movement - Extensively illustrated with 3D images of simulated human motion (full color in the ebook version)

Environmental Psychology Eddie Edgerton, Ombretta Romice, Christopher Spencer, 2021-02-19 This book contains a selection of nine detailed and varied research papers in the area of environment-behaviour studies. The papers are based on presentations at the 4th UK Environmental Psychology (EPUK4) conference that was held in Glasgow, Scotland in September 2005. The conference theme centred on a recurring debate in Environmental Psychology and one which had recently been 'reopened' by Prof. Christopher Spencer (University of Sheffield), namely: "how can we ensure that the findings from high quality environment-behaviour research are put into practice in 'real-world' applications"? This book outlines current views on the debate along with suggestions on how we might more effectively address this 'research-practice' relationship. EPUK is an informal organisation that brings together environmental psychologists and other professionals working in the area of environment-behaviour research. EPUK4 was jointly organised by Dr. Edward Edgerton (University of Paisley) and Dr. Ombretta Romice (University of Strathclyde), and was attended by around sixty international experts in the field.

Dimensional Analysis And Intelligent Experimentation Andrew Clennel Palmer, 2008-06-17 Dimensional analysis is a magical way of finding useful results with almost no effort. It makes it possible to bring together the results of experiments and computations in a concise but exact form, so that they can be used efficiently and economically to make predictions. It takes advantage of the fact that phenomena go their way independently of the units we measure them with, because the units have nothing to do with the underlying physics. This simple idea turns out to be unexpectedly powerful. Students often fail to gain from dimensional analysis, because bad teaching has led them to suppose it cannot be used to derive new results, and can only confirm results that have been secured by some other route. That notion is false. This book demonstrates what can be done with dimensional analysis through a series of examples, starting with Pythagoras' theorem and the simple pendulum, and going on to a number of practical examples, many from the author's experience in ocean engineering. In parallel, the book explains the underlying theory, starting with Vaschy's elegant treatment, whilst avoiding unnecessary complexity. It also explores the use and misuse of models, which can be useful but can also be seriously misleading.
