Both standard and cutting-edge applications of MRI are included. Material on molecular imaging and nanotechnology give glimpses into the future of the field.

MR Imaging of the Skull and Brain Klaus Sartor, 2012-12-06 Subject of the book is MR imaging in all kinds of diseases that may affect the skull and brain. Primary purpose of the book is to provide the reader with a descriptive as well as pictorial overview of MRI in the various pathologic processes. An important additional purpose is to explain how to make the best use of MRI if a particular disease is suspected. Extensive information on differential diagnosis will also be included.

Clinical Electroencephalography Oriano Mecarelli,2019-06-06 This book describes the developments and improvements in electroencephalography (EEG). In recent years, digital technology has replaced analog equipments, and it is now possible to easily record and store EEG tracings and to quickly recall previously acquired material for subsequent analysis. In addition, not only static figures, but also electronic supplementary materials can be included in books, enabling EEGs to be viewed in real-time. In clinical practice, EEG still represents the most important functional examination in the study CNS development and its anatomical and physiological integrity throughout life. In the pathological context, EEG provides indispensable diagnostic information for classification of epileptic syndromes, and it is also valuable in all the other CNS diseases (infectious, cerebrovascular, neurodegenerative, etc). Furthermore, monitoring EEG can be widely used in emergency settings, such as emergency departments or intensive care units. In comatose patients, EEG provides information regarding prognosis and evaluation of the sedative effect of anesthetic drugs. Written by a group of leading national and international experts, it offers a substantial, yet practical, EEG compendium, which serves as a reference resource for physicians and neurodiagnostic technologists as well as physicians-in-training, researchers, practicing electroencephalographers and students.

The Central Nervous System of Vertebrates Rudolf Nieuwenhuys,Hans J. ten Donkelaar,Charles Nicholson,2014-11-14 This comprehensive reference is clearly destined to become the definitive anatomical basis for all neuroscience research. The book provides a complete overview and comparison of the structural organization of all vertebrate groups, ranging from amphioxus and lamprey through fishes, amphibians and birds to mammals. The large specialised section of the work, devoted to the CNS of the various vertebrate groups, is preceded by introductory chapters on neurons, cell masses, fibre tracts, morphogenesis, methodology, and techniques. Although focusing on structure, the authors provide functional correlations throughout. This monumental work is, and will remain, unique; the only source of such brilliant illustrations at both the macroscopic and microscopic levels.

Rethinking Democracy Leo Panitch,Greg Albo,2017-12-22 For years, intellectuals have argued that, with the triumph of capitalist, liberal democracy, the Western World has reached “the end of history.” Recently, however, there has been a rise of authoritarian politics in many countries. Concepts of post-democracy, anti-politics, and the like are gaining currency in theoretical and political debate. Now that capitalist democracies are facing seismic and systemic challenges, it becomes

increasingly important to investigate not only the inherent antagonism between liberalism and the democratic process, but also socialism. Is socialism an enemy of democracy? Could socialism develop, expand, even enhance democracy? While this volume seeks a reappraisal of existing liberal democracy today, its main goal is to help lay the foundation for new visions and practices in developing a real socialist democracy. Amid the contradictions of neoliberal capitalism today, the responsibility to sort out the relationship between socialism and democracy has never been greater. No revival of socialist politics in the twenty-first century can occur without founding new democratic institutions and practices.

Picturing Science, Producing Art Peter Galison, Caroline A. Jones, 2014-02-04 Between the disciplines of art history and the history of science lies a growing field of inquiry into what science and art share as both image-making and knowledge-producing activities. The contributors of *Picturing Science, Producing Art* occupy this intermediate zone to analyze both scientific and aesthetic representations, utilizing disciplinary perspectives that range from art history to sociology, history and philosophy of science to gender studies, cultural history to the philosophy of mind. Organized in five sites--*Styles, The Body, Seeing Wonders, Objectivity/Subjectivity, and Cultures of Vision*--their topics extend from Cinquecento theories of female reproduction to the technologies of cloning, from medieval depictions of the stigmata to electrical metaphors for sex, from astronomical drawings to radioencephalography, from Phoenician griffons carved in ivory to factories cast in concrete. The internationally renowned contributors go beyond both science wars and culture wars by exploring substantive links between systems of visual representation and knowledge in science and art. Contributors include Svetlana Alpers, Jonathan Crary, Arnold Davidson, Carlo Ginzburg, Donna Haraway, Bruno Latour, and Simon Schaffer.

Risk Niklas Luhmann, 2017-09-04 A great deal of attention has been devoted to risk research. Sociologists in general have limited themselves to varying recognitions of a society at risk and have traced out the paths to disaster. The detailed research has yet to be undertaken. In *Risk*, now available in paperback, Niklas Luhmann develops a theoretical program for such research. His premise is that the concept of risk projects essential aspects of our description of the future onto the present. Risk is conceived as the possibility of triggering unexpected, unlikely, and detrimental consequences by means of a decision attributable to a decision maker.

The Hottentot Venus Rachel Holmes, 2008 In 1810 Saartjie Baartman was London's most famous curiosity. Famed for her exquisite physique - in particular her shapely bottom - she was stared at, stripped, pinched, painted, worshipped and ridiculed. But this tragic young South African woman was also a symbol of the abolished slave trade, exploitation and colonialism. In this scintillating and vividly written book the full arc of Baartman's extraordinary life is traced for the first time.

The Routledge Companion to Indigenous Repatriation Cressida Fforde, C Timothy McKeown, Honor Keeler, 2022-06-13 This volume brings together Indigenous and non-Indigenous repatriation practitioners and researchers to provide the reader with an international overview of the removal and return of Ancestral Remains. The Ancestral Remains of Indigenous peoples are today housed in museums and other collecting institutions globally. They were taken from anywhere the deceased can be found, and their removal occurred within a context of deep power imbalance within a colonial project that had a lasting effect on Indigenous peoples worldwide. Through the efforts of First Nations campaigners, many have returned home. However, a large number are still retained. In many countries, the repatriation issue has driven a profound change in the relationship between Indigenous peoples and collecting institutions. It has enabled significant steps towards

resetting this relationship from one constrained by colonisation to one that seeks a more just, dignified and truthful basis for interaction. The history of repatriation is one of Indigenous perseverance and success. The authors of this book contribute major new work and explore new facets of this global movement. They reflect on nearly 40 years of repatriation, its meaning and value, impact and effect. This book is an invaluable contribution to repatriation practice and research, providing a wealth of new knowledge to readers with interests in Indigenous histories, self-determination and the relationship between collecting institutions and Indigenous peoples.

Taking on Technocracy Dolores L. Augustine, 2021-09-17 The German abandonment of nuclear power represents one of the most successful popular revolts against technocratic thinking in modern times—the triumph of a dynamic social movement, encompassing a broad swath of West Germans as well as East German dissident circles, over political, economic, and scientific elites. *Taking on Technocracy* gives a brisk account of this dramatic historical moment, showing how the popularization of scientific knowledge fostered new understandings of technological risk. Combining analyses of social history, popular culture, social movement theory, and histories of science and technology, it offers a compelling narrative of a key episode in the recent history of popular resistance.

Cell Differentiation Lutz Nover, M. Luckner, B. Parthier, 2011-12-16 Three years have elapsed since the publication of the first edition of this book (in German). The continued interest of our readers and the rapid progress of our knowledge in many fields necessitates a thoroughly revised and somewhat enlarged new edition. Cell differentiation is a prerequisite of life. It is defined as the process leading to the qualitatively and quantitatively selective realization of distinct parts of a given genetic material. Cell differentiation comprises five main aspects: (1) signal reception and transformation, (2) selective rearrangements of the genetic material, (3) differential gene expression, (4) organization of gene expression programs and (5) intercellular coordination of cell differentiation within the developmental programs of multicellular organisms. Despite the bewildering multiplicity of its results, i.e., the differentiated phenotypes of cells, there are apparently fundamental similarities with respect to the molecular mechanisms of the process itself. These mechanisms constitute the central subject of this book.
