Engineering Design Applications III Andreas Öchsner,Holm Altenbach,2020-03-05 This book provides an update on recent advances in various areas of modern engineering design, such as mechanical, materials, computer, and process engineering, which provide the foundation for the development of improved structures, materials, and processes. The modern design cycle is characterized by the interaction of different disciplines and a strong shift toward computer-based approaches involving only a small number of experiments for verification purposes. A major driver for this development is the increased demand for cost reduction, which is also connected to environmental demands. In the transportation industry (e.g. automotive or aerospace), where there is a demand for greater fuel efficiency, one solution is lighter structures and/or improved processes for energy conversion. Another emerging area is the interaction of classical engineering with the health and medical sector.

Distributed Computing and Artificial Intelligence Andre Ponce de Leon F. de Carvalho,Sara Rodríguez-González,Juan F. De Paz Santana,Juan Manuel Corchado Rodríguez,2010-11-18 The International Symposium on Distributed Computing and Artificial Intelligence (DCAI'10) is an annual forum that brings together past experience, current work and promising future trends associated with distributed computing, artificial intelligence and their application to provide efficient solutions to real problems. This symposium is organized by the Biomedicine, Intelligent System and Educational Technology Research Group (<http://bisite.usal.es/>) of the University of Salamanca. The present edition has been held at the Polytechnic University of Valencia, from 7 to 10 September 2010, within the Congreso Español de Informática (CEDI 2010). Technology transfer in this field is still a challenge, with a large gap between academic research and industrial products. This edition of DCAI aims at contributing to reduce this gap, with a stimulating and productive forum where these communities can work towards future cooperation with social and economic benefits. This conference is the forum in which to present application of innovative techniques to complex problems. Artificial intelligence is changing our society. Its application in distributed environments, such as internet, electronic commerce, environment monitoring, mobile communications, wireless devices, distributed

computing, to cite some, is continuously increasing, becoming an element of high added value with social and economic potential, both industry, life quality and research. These technologies are changing constantly as a result of the large research and technical effort being undertaken in universities, companies.

Engineering Design Applications Andreas Öchsner,Holm Altenbach,2018-05-19 This volume gives an overview on recent developments for various applications of modern engineering design. Different engineering disciplines such as mechanical,

materials, computer and process engineering provide the foundation for the design and development of improved structures, materials and processes. The modern design cycle is characterized by an interaction of different disciplines and a strong shift to computer-based approaches where only a few experiments are performed for verification purposes. A major driver for this development is the increased demand for cost reduction, which is also connected to environmental demands. In the transportation industry (e.g. automotive or aerospace), this is connected with the demand for higher fuel efficiency, which is related to the operational costs and the lower harm for the environment. One way to fulfil such requirements are lighter structures and/or improved processes for energy conversion. Another emerging area is the interaction of classical engineering with the health and medical sector. In this book, many examples of the mentioned design applications are presented.

Levantones, narcofosas y falsos positivos José Reveles Morado, 2012-04-01 En el contexto de los atroces saldos que ha dejado la guerra contra el narcotráfico en nuestro país, José Reveles documenta con gran oficio periodístico una impactante serie de casos sobre levantones, narcofosas y falsos positivos. En México la corrupción política al más alto nivel es el principal motor de la violencia encarnizada y de las violaciones masivas de los derechos humanos, fenómenos que José Reveles presenta en este libro con el más fino detalle. Edgardo Buscaglia Los saldos de la guerra contra el crimen organizado en México ya han alcanzado la categoría de tragedia: el país se ha convertido en una tumba colectiva de sus propios ciudadanos. Frente a este desolador panorama, en el presente libro se buscan explicaciones: por qué tanta muerte, tantos entierros clandestinos, tantos desaparecidos. Por medio de testimonios de primera mano y análisis de expertos, José Reveles pone en evidencia no sólo que el Estado mexicano ha sido rebasado por las corporaciones delictivas, también que cada día la población civil es más vulnerable a la violencia desmedida. Abundan las víctimas inocentes: los asesinados en retenes militares, en bares, en centros de rehabilitación o en fiestas familiares; los levantados y los falsos positivos (culpables fabricados). A partir de datos apabullantes sobre la realidad criminal, esta investigación periodística advierte sobre la aparición de escuadrones de exterminio y limpieza social, describe abusos de soldados y marinos, nombra a los perpetradores y confirma el establecimiento de una política que arrastra a la muerte a muchos prescindibles, desechables y personas comunes que pasaban por ahí. Después de terribles hechos como la masacre de 72 indocumentados en San Fernando, Tamaulipas, ocurrida en 2010, impactó el hallazgo de cuantiosos cadáveres en las llamadas narcofosas; peor aún, en estas páginas se demuestra que hay varios cientos más diseminados a lo largo del territorio nacional. José Reveles, autor de El cártel incómodo, asegura que el verdadero infierno apenas se vislumbra.

La paz no nace cuando la guerra termina Francisco Manuel López López, José Manuel Alarcón Martínez, 2022-07-14 Con este trabajo queremos recuperar y dar a conocer a los ciudadanos de Roquetas de Mar y a todos aquellos interesados en lo acontecido en dicha localidad, una parte de la historia de este pueblo de la provincia de Almería. Una historia local, pero

que abarca unos acontecimientos cruciales en la Historia española que marcaron profundamente el devenir posterior, y cuyas consecuencias están aún hoy día presentes en la sociedad actual. Abordaremos el análisis de la represión franquista partiendo del marco histórico que la originó, incluyendo los aspectos sociales y económicos que son en gran parte responsables de los posicionamientos políticos de la población. Hemos estructurado el trabajo en tres partes. La primera, dedicada a establecer el marco histórico, la subdividimos en dos capítulos: un primer capítulo en el que se apuntan algunos aspectos socioeconómicos; un segundo capítulo en el que se hace un recorrido por la situación política, recogiendo las asociaciones y partidos existentes, analizando los procesos electorales y las actuaciones de las corporaciones locales. En la segunda parte; en el tercer capítulo hacemos un breve análisis de los acontecimientos más significativos ocurridos en la localidad durante la Guerra Civil, excluyendo la represión en la retaguardia republicana que la tratamos, de forma más pormenorizada, en el cuarto capítulo. Hemos reunido en el mismo bloque de estudio tanto el análisis de la Segunda República como el de la Guerra Civil, pues consideramos, en contra de la opinión de algunos, que la segunda no fue consecuencia de la primera. La tercera parte del trabajo la constituye el análisis de la represión de posguerra, tanto física como económica, a través de otros dos capítulos: en el primero contemplamos globalmente la represión en cuanto a delitos, tribunales, condenas, procesados y procedimientos; en el segundo se recogen, de forma individualizada, los procedimientos sumarios seguidos contra ciudadanos de Roquetas de Mar por diferentes hechos ocurridos desde la llegada al poder del Frente Popular hasta la finalización del conflicto. Concluimos con un estudio dedicado a la represión económica a través de la Ley de Responsabilidades Políticas.

Hyperborder Fernando Romero,2008 Roving vigilantes, fear-mongering politicians, hysterical pundits, and the looming shadow of a seven hundred-mile-long fence: the US-Mexican border is one of the most complex and dynamic areas on the planet today. Hyperborder provides the most nuanced portrait yet of this dynamic region. Author Fernando Romero presents a multidisciplinary perspective informed by interviews with numerous academics, researchers, and organizations. Provocatively designed in the style of other kinetic large-scale studies like Rem Koolhaas's Content and Bruce Mau's Massive Change, Hyperborder is an exhaustively researched report from the front lines of the border debate.

Properties and Characterization of Modern Materials Andreas Öchsner,Holm Altenbach,2016-07-30 This book focuses on robust characterization and prediction methods for materials in technical applications as well as the materials' safety features during operation. In particular, it presents methods for reliably predicting material properties, an aspect that is

becoming increasingly important as engineering materials are pushed closer and closer to their limits to boost the performance of machines and structures. To increase their engineering value, components are now designed under the consideration of their multiphysical properties and functions, which requires much more intensive investigation and characterization of these materials. The materials covered in this monograph range from metal-based groups such as lightweight alloys, to advanced high-strength steels and modern titanium alloys. Furthermore, a wide range of polymers and composite materials (e.g. with micro- and nanoparticles or fibres) is covered. The book explores methods for property prediction from classical mechanical characterization-related fields of application, for example, from wear, creep, fatigue and crack growth, to specific surface properties, to dielectric and electrochemical values. As in all fields of modern engineering, the process is often accompanied by numerical simulation and optimization.
