Mummy Portraits of Roman Egypt Marie Svoboda, Caroline Cartwright, 2020-08-25 This publication presents fascinating new findings on ancient Romano-Egyptian funerary portraits preserved in international collections. Once interred with mummified remains, nearly a thousand funerary portraits from Roman Egypt survive today in museums around the world, bringing viewers face-to-face with people who lived two thousand years ago. Until recently, few of these paintings had undergone in-depth study to determine by whom they were made and how. An international collaboration known as APPEAR (Ancient Panel Paintings: Examination, Analysis, and Research) was launched in 2013 to promote the study of these objects and to gather scientific and historical findings into a shared database. The first phase of the project was marked with a two-day conference at the Getty Villa. Conservators, scientists, and curators presented new research on topics such as provenance and collecting, comparisons of works across institutions, and scientific studies of pigments, binders, and supports. The papers and posters from the conference are collected in this publication, which offers the most up-to-date information available about these fascinating remnants of the ancient world. The free online edition of this open-access publication is available at www.getty.edu/publications/mummyportraits/ and includes zoomable illustrations and graphs. Also available are free PDF, EPUB, and Kindle/MOBI downloads of the book.

Alexandria and Alexandrianism J. Paul Getty Museum, 1996-09-26 One of the great seats of learning and repositories of knowledge in the ancient world, Alexandria, and the great school of thought to which it gave its name, made a vital contribution to the development of intellectual and cultural heritage in the Occidental world. This book brings together twenty papers delivered at a symposium held at the J. Paul Getty Museum on the subject of Alexandria and Alexandrianism. Subjects range from “The Library of Alexandria and Ancient Egyptian Learning” and “Alexander’s Alexandria” to “Alexandria and the Origins of Baroque Architecture.” With nearly two hundred illustrations, this handsome volume presents some of the world’s leading scholars on the continuing influence and fascination of this great city. The distinguished contributors include

Peter Green, R. R. R. Smith, and the late Bernard Bothmer.

Ancient Faces Susan Walker, 2020-03-25 From the first major discoveries a century ago, the painted portraits of Roman Egypt were a revelation to scholars and the public alike, and the recent finding of a new cache of these gilded images, which made national headlines, have only heightened their mystery and appeal. Published to coincide with a new major exhibition of these portraits, *Ancient Faces* is the most comprehensive, up-to-date survey of these astonishing works of art. Dating from the later period of Roman rule in Egypt, shortly before the birth of Christ, the painted mummy portraits are among the most remarkable products of the ancient world, a fusion of the traditions of pharonic Egypt and the Classical world. They are historical and cultural objects of outstanding importance and beauty, superb works of art that represent some of the earliest known examples of life-like portraiture. Though the subjects of the portraits believed in the traditional Egyptian cults, which offered them a firm prospect of life after death, they also wished to be commemorated in the Roman manner, with their fashion of dress and adornment signaling their status in life. Despite their ancient history, these portraits speak to the modern eye with a beauty and intensity that would be lost to portraiture until the Renaissance.

Frame by Frame Hannah Frank, 2019-05-07 At publication date, a free ebook version of this title will be available through Luminos, University of California Press's Open Access publishing program. Visit www.luminosoa.org to learn more. In this beautifully written and deeply researched study, Hannah Frank provides an original way to understand American animated cartoons from the Golden Age of animation (1920–1960). In the pre-digital age of the twentieth century, the making of cartoons was mechanized and standardized: thousands of drawings were inked and painted onto individual transparent celluloid sheets (called “cels”) and then photographed in succession, a labor-intensive process that was divided across scores of artists and technicians. In order to see the art, labor, and technology of cel animation, Frank slows cartoons down to look frame by frame, finding hitherto unseen aspects of the animated image. What emerges is both a methodology and a highly original account of an art formed on the assembly line.

Artistry in Bronze Jens M Daehner, Kenneth Lapatin, Ambra Spinelli, 2017-11-21 The papers in this volume derive from the proceedings of the nineteenth International Bronze Congress, held at the Getty Center and Villa in October 2015 in connection with the exhibition *Power and Pathos: Bronze Sculpture of the Hellenistic World*. The study of large-scale ancient bronzes has long focused on aspects of technology and production. Analytical work of materials, processes, and techniques has significantly enriched our understanding of the medium. Most recently, the restoration history of bronzes has established itself as a distinct area of investigation. How does this scholarship bear on the understanding of bronzes within the wider history of ancient art? How do these technical data relate to our ideas of styles and development? How has the material itself affected ancient and modern perceptions of form, value, and status of works of art?

Contemporary Jewish Reality in Germany and Its Reflection in Film Claudia Simone Dorchain, Felice Naomi Wonenberg, 2012-12-06 The notion of “self” and “other” and its representation in artwork and literature is an important theme in current cultural sciences as well as in our everyday life in contemporary Western societies. Moreover, the concept of “self” and “other” and its imaginary dichotomy is gaining more and more political impact in a world of resurfacing ideology-ridden conflicts. The essays deal with Jewish reality in contemporary Germany and its reflection in movies from the special point of view of cultural sciences, political sciences, and religious studies. This anthology presents challengingly new insights into topics rarely covered, such as youth culture or humor, and finally discusses the images of Jewish life as realities still to be constructed.

The Florentine Codex Jeanette Favrot Peterson, Kevin Terraciano, 2019-09-10 In the sixteenth century, the Franciscan friar Bernardino de Sahagún and a team of indigenous grammarians, scribes, and painters completed decades of work on an extraordinary encyclopedic project titled General History of the Things of New Spain, known as the Florentine Codex (1575-1577). Now housed in the Biblioteca Medicea Laurenziana in Florence and bound in three lavishly illustrated volumes, the codex is a remarkable product of cultural exchange in the early Americas. In this edited volume, experts from multiple disciplines analyze the manuscript’s bilingual texts and more than 2,000 painted images and offer fascinating, new insights on its twelve books. The contributors examine the “three texts” of the codex—the original Nahuatl, its translation into Spanish, and its painted images. Together, these constitute complementary, as well as conflicting, voices of an extended dialogue that occurred in and around Mexico City. The volume chapters address a range of subjects, from Nahua sacred beliefs, moral discourse, and natural history to the Florentine artists’ models and the manuscript’s reception in Europe. The Florentine Codex ultimately yields new perspectives on the Nahua world several decades after the fall of the Aztec empire.

Data Mining and Data Visualization, 2005-05-02 Data Mining and Data Visualization focuses on dealing with large-scale data, a field commonly referred to as data mining. The book is divided into three sections. The first deals with an introduction to statistical aspects of data mining and machine learning and includes applications to text analysis, computer intrusion detection, and hiding of information in digital files. The second section focuses on a variety of statistical methodologies that have proven to be effective in data mining applications. These include clustering, classification, multivariate density estimation, tree-based methods, pattern recognition, outlier detection, genetic algorithms, and dimensionality reduction. The third section focuses on data visualization and covers issues of visualization of high-dimensional data, novel graphical techniques with a focus on human factors, interactive graphics, and data visualization using virtual reality. This book represents a thorough cross section of internationally renowned thinkers who are inventing methods for dealing with a new data paradigm. - Distinguished contributors who are international experts in aspects of data mining - Includes data mining approaches to non-numerical data mining including text data, Internet traffic data, and geographic data - Highly topical

discussions reflecting current thinking on contemporary technical issues, e.g. streaming data - Discusses taxonomy of dataset sizes, computational complexity, and scalability usually ignored in most discussions - Thorough discussion of data visualization issues blending statistical, human factors, and computational insights
