The Song Of The Dodo David Quammen,2012-03-31 Why have island ecosystems always suffered such high rates of extinction? In our age, with all the world's landscapes, from Tasmania to the Amazon to Yellowstone, now being carved into island-like fragments by human activity, the implications of this question are more urgent than ever. Over the past eight years, David Quammen has followed the threads of island biogeography on a globe-encircling journey of discovery.

Extinct Birds Julian P. Hume,2017-08-24 A comprehensive review of the hundreds of bird species that have become extinct over the last 1,000 years of habitat degradation, over-hunting and rat introduction. Extinct Birds has become the standard text on this subject, covering both familiar icons of extinction as well as more obscure birds, some known from just one specimen or from travellers' tales. This second edition is expanded to include dozens of new species, as more are constantly added to the list, either through extinction or through new subfossil discoveries. The book is the result of decades of research into literature and museum drawers, as well as caves and subfossil deposits, which often reveal birds long-gone that disappeared without ever being recorded by scientists while they lived. From Great Auks, Carolina Parakeets and Dodos to the amazing yet almost completely vanished bird radiations of Hawaii and New Zealand via rafts of extinction in the Pacific and elsewhere, this book is both a sumptuous reference and astounding testament to humanity's devastating impact on wildlife.

Biology Peter Ellis,2003 These readers are designed to extend and deepen students' level of scientific knowledge and understanding. Topics are presented in various forms - stories, case studies, articles and discussion pieces - to stimulate and gain students' interest. Questions increase in difficulty in order to show students' progression, and help consolidate learning.

Dinosaurs to Dodos Don Lessem,1999 Presents the names, physical characteristics, and places of origin of a variety of extinct animals, arranged chronologically into eras, periods, and epochs, and discusses times of mass extinction.

The Dodo and the Solitaire Jolyon C. Parish,2013 The most comprehensive book to date about these two famously extinct birds.

The Dodo and the Solitaire Jolyon C. Parish,2012-12-03 This account of two extinct bird species offers “an amazing amount of history, references, facts, maps, and illustrations” (Library Journal). The Dodo and the Solitaire is the most comprehensive book to date about these two famously extinct birds. It contains all the known contemporary accounts and

illustrations of the dodo and solitaire, covering their history after extinction and discussing their ecology, classification, phylogenetic placement, and evolution. Both birds were large and flightless and lived on inhabited islands some five hundred miles east of Madagascar. The first recorded descriptions of the dodo were provided by Dutch sailors who encountered them in 1598—and within a century, the dodo was extinct. So quickly did the bird disappear that there is insufficient evidence to form an entirely accurate picture of its appearance and ecology, and the absence has led to much speculation. This extraordinary book pieces together the story of these two lost species from the fragments that have been left behind. “An up-to-date and comprehensive review of everything we know about the dodo and solitaire.” —Journal of Vertebrate Paleontology

Berkeley's World Tom Stoneham, 2002 Tom Stoneham offers a clear and detailed study of Berkeley's metaphysics and epistemology, as presented in his classic work *Three Dialogues between Hylas and Philonous*, originally published in 1713 and still widely studied today. Stoneham writes for advanced undergraduates, graduate students, and academics in philosophy who are not specialists in the early modern period, and shows that Berkeley is an important and systematic philosopher whose work is still of relevance to philosophers today.

Lost Land of the Dodo Anthony Cheke, Julian P. Hume, 2010-06-30 The Mascarene islands in the southern Indian Ocean - Mauritius, Réunion and Rodrigues - were once home to an extraordinary range of birds and reptiles. Evolving on these isolated volcanic islands in the absence of mammalian predators or competitors, the land was dominated by giant tortoises, parrots, skinks and geckos, burrowing boas, flightless rails & herons, and of course (in Mauritius) the Dodo. Uninhabited and only discovered in the 1500s, colonisation by European settlers in the 1600s led to dramatic changes in the ecology of the islands; the birds and tortoises were slaughtered indiscriminately while introduced rats, cats, pigs and monkeys destroyed their eggs, the once-extensive forests logged, and invasive introduced plants from all over the tropics devastated the ecosystem. The now-familiar icon of extinction, the Dodo, was gone from Mauritius within 50 years of human settlement, and over the next 150 years many of the Mascarenes' other native vertebrates followed suit. The product of over 30 years research by Anthony Cheke, *Lost Land of the Dodo* provides a comprehensive yet hugely enjoyable account of the story of the islands' changing ecology, interspersed with human stories, the islands' biogeographical anomalies, and much else. Many French publications, old and new, especially for Réunion, are discussed and referenced in English for the first time. The book is richly illustrated with maps and contemporary illustrations of the animals and their environment, many of which have rarely been reprinted before. Illustrated box texts look in detail at each extinct vertebrate species, while Julian Hume's superb colour plates bring many of the extinct birds to life. *Lost Land of the Dodo* provides the definitive account of this tragic yet remarkable fauna, and is a must-read for anyone interested in islands, their ecology and the history of our relationship with the world around us.

can see what the modern view of the dodo tells us about the history of our changing understanding and valuation of nature and our place in it. Strong writing, powered by lively historical anecdotes and sober insights into human behavior, makes this beautifully illustrated book a page-turner to the end.

[How to Clone a Mammoth](#) Beth Shapiro, 2020-09-08 An insider's view on bringing extinct species back to life Could extinct species, like mammoths and passenger pigeons, be brought back to life? In *How to Clone a Mammoth*, Beth Shapiro, an evolutionary biologist and pioneer in ancient DNA research, addresses this intriguing question by walking readers through the astonishing and controversial process of de-extinction. From deciding which species should be restored to anticipating how revived populations might be overseen in the wild, Shapiro vividly explores the extraordinary cutting-edge science that is being used to resurrect the past. Considering de-extinction's practical benefits and ethical challenges, Shapiro argues that the overarching goal should be the revitalization and stabilization of contemporary ecosystems. Looking at the very real and compelling science behind an idea once seen as science fiction, *How to Clone a Mammoth* demonstrates how de-extinction will redefine conservation's future.
