MANUAL DE TÉCNICAS DE MONTAÑA E INTERPRETACIÓN DE LA NATURALEZA (Bicolor) Javier A. Melendo Soler, 2006-08-31 Este libro está estructurado en doce capítulos, con numeroso soporte gráfico, que recogen de la forma más compleja posible los aspectos que debemos conocer al adentrarnos en el medio natural. El orden y la composición de los capítulos son los siguientes: Orientación y cartografía Se describen los sistemas de referencia y las técnicas de orientación sustentadas en ellos. La utilización de mapas, brújulas y otros instrumentos, necesarios para planificar nuestros itinerarios. La interpretación de los mapas de los lugares por los que nos desplazamos es el soporte principal para el desarrollo de nuestra excursión y el mejor medio para no extraviarnos. Técnicas de progresión por senderos e itinerarios de media y baja montaña El senderismo, la media montaña, la alta montaña sin necesidad de utilizar vías de escalada, forman el contenido de este capítulo. Caminar por diferentes tipos de terreno y conocer el material adecuado para la actividad. ¿Qué debemos llevar puesto?, ¿qué material debo transportar? Son algunas de las preguntas que todos nos hacemos y que tratamos de contestar. El cálculo de la duración de la excursión, así como sus períodos de pausa, nos obligará a establecer tiempos en función de los desniveles o de la longitud por correr. Meteorología Gracias a los medios informativos actuales, no deberíamos comenzar nuestras actividades sin informarnos de la meteorología prevista. La interpretación de ésta no termina con la televisiva imagen de unas nubes encima de un mapa. El conocimiento de la dinámica atmosférica y la interpretación de los signos naturales evolutivos permitirá evitarnos más de una situación comprometida, o al menos estar preparados para enfrentarnos a ella. Se expone un detallado estudio sobre las temperaturas, las precipitaciones y la presión atmosférica. Interpretación del paisaje La mirada requiere un adiestramiento para contemplar. Diferentes personas pueden acercarse a un mismo paisaje y tener percepciones diferentes. El presente capítulo pretende dotar al observador de un bagaje instrumental que le permita interpretarlo. Los métodos de estudio utilizados serán: las unidades del paisaje, su caracterización, su dinámica propia de un terreno vivo y su valoración tanto individual como grupal. Organización de campamentos y travesías de media montaña Cuando nuestra actividad ocupa más de un día, se hace necesaria la acampada. La organización de un campamento fijo, o un campamento itinerante, está sometida a unas condiciones y a una normativa que es imprescindible conocer. Desde el respeto al medio natural, deberemos elegir las ubicaciones más seguras para la acampada. El equipo de acampada que debemos transportar, tanto personal, como colectivo, complementa a los materiales necesarios para el desarrollo de la actividad.

Senderos y caminos El auge del senderismo ha provocado la creciente señalización de muchos caminos. Son muchas las zonas que están incentivando el uso de los caminos tradicionales, o incluso abriendo nuevos caminos. La autora nos acerca a la actual normativa y regulación de estos senderos. La interpretación del medio ambiente Los efectos resultantes de la modificación que el hombre imprime al medio natural condicionan su protección. Los contenidos de este capítulo se orientan hacia las pautas de conducta que debemos adoptar. El conocimiento de la normativa medioambiental en nuestro país, así como la evaluación del impacto ambiental, nos ayudarán a conseguir este objetivo. Seguridad en montaña, utilización del material de seguridad y técnicas básicas de escalada en roca La progresión en la montaña con seguridad requiere conocer las normas que debemos cumplir en caso de un accidente, o para solicitar socorro. El conocimiento de técnicas básicas de escalada, así como el material necesario para éstas, es importante tanto si nuestra actividad es la escalada, como si a lo largo de nuestro recorrido tenemos que utilizar, para nuestra seguridad, cuerdas u otro material auxiliar. Nudos, anclajes y maniobras con cuerdas En continuidad con las maniobras de seguridad, se describen los principales nudos y los anclajes, tanto naturales como artificiales. Las maniobras con cuerdas son el complemento imprescindible en terrenos escarpados, o con dificultades naturales infranqueables. El rapel, las tecnicas de ascenso, las de aseguramiento, auto-rescate, o el transporte de accidentados, forma parte de estas. Supervivencia La prudencia y nuestra preparacion colaboran a evitar los accidentes. El sentido comun y algunos conocimientos basicos pueden ser imprescindibles ante situaciones limite. Saber utilizar los recursos naturales y propios, para obtener agua, alimentos, o bien procurarnos un refugio, son algunos de los apartados tratados en este capıtulo. Preparacion fısica y nutricion para la realizacion de actividades en la naturaleza El acercamiento a unas actividades mas exigentes requiere alcanzar un adecuado nivel de condicion fısica. Si no queremos que nuestras excursiones se conviertan en una tortura, debera estar en consonancia nuestra capacidad fısica con los objetivos a alcanzar. El autor describe las normas basicas para el entrenamiento de excursionistas y montaneros, ası como los sistemas de obtencion de la energıa, en los que se sustenta una nutricion e hidratacion adecuadas. Medidas preventivas y primeros auxilios en el medio natural Se recoge un amplio abanico de las lesiones y accidentes que pueden darse en el medio natural. La necesidad de una rapida instauracion de medidas de auxilio, ası como una correcta aplicacion de estas, nos obliga a ser insistentes en su conocimiento. La lejanıa de cualquier centro sanitario hace todavıa mas necesario que las personas que se desplazan por la naturaleza conozcan a fondo las maniobras de primeros auxilios.
