Brazilian Mangroves and Salt Marshes Yara Schaeffer-Novelli, Guilherme Moraes de Oliveira Abuchahla, Gilberto Cintrón-Molero, 2023-02-25 This book offers a new ecosystemic approach to the understanding of mangrove and salt marsh ecosystems. Brazil has one of the largest areas of mangroves in the world, where salt marshes might or might not be associated. Different landscapes comprise the extensive coastline, where mangrove and salt marsh species' composition is discussed through the analysis of physiography, zonation, and succession processes. Both salt marsh and mangrove plants and the associated macroalgae will be characterized in their ecophysiological and phenological aspects, as well as genetic and epigenetic diversity. The chapters on microbial diversity and litterfall expose the well-known importance of these ecosystems as highly productive carbon sinks and pumps. The associated fauna of invertebrates (benthic meio and macrofaunas, especially brachyuran crabs) and vertebrates (fishes, birds, and mammals) are presented in a special section. The conservational approach encompasses issues, such as historical ecology, economic valuation, protected areas, environmental education, climate changes, and adaptive management.

Tropical Wetlands - Innovation in Mapping and Management Yiyi Sulaeman, Laura Poggio, Budiman Minasny, Dedi Nursyamsi, 2019-11-26 This book contains papers presented at the International Workshop on Tropical Wetlands, held in Banjarmasin, Indonesia. This workshop discussed wetland mapping and characterization as well as wetland management for sustainable agriculture. This volume contains selected papers on tropical wetlands, more specifically, peatland, tidal land, and acid sulphate soils. This book presents an international overview of wetland and peatland mapping experiences from Indonesia, Congo, Brazil, Australia, and Scotland. Several innovative techniques are discussed, including integrated digital soil mapping and remote sensing techniques, as well as geodatabase processing and field surveying. This book further discussed tropical wetland management for agriculture as practiced in Indonesia, Vietnam, and Thailand. The contents of this book are suitable and should be a good reference for those who are involved in research, development, and management of tropical wetland, including academics, soil scientists, environmentalists, researchers, agriculturists, students, agri-businessmen, policy makers, land managers and farmers.

Blue Carbon Mangrove Ecosystems Miguel Clüsener-Godt, Hiroyuki Matsuda, Benno Böer, Ronald A. Loughland, 2024-10-14 Blue carbon ecosystems are of tremendous value toward the utilization of high-salinity water, such as

seawater, as well as hyper-saline soils, and salt-tolerant biota for the production of biomass, for food, feed, fiber, fuel, other economic purposes, and carbon sequestration. In order to achieve the 17 SDGs, the scientific research into blue carbon ecosystems is an absolutely important element. Moreover, monitoring is needed, as well as the conservation of the remaining blue carbon ecosystems, and the restoration of lost habitat. The book will provide comprehensive scientific documentation inspiring the way forward on how to utilize saline resources in the best interest of humanity. It will try to foster the academic research and networking for land-users, politicians, development banks, innovative farmers, investors, energy- producers, and carbon-off-setters. The papers presented in this book emanate from a conference held at the Yokohama National University (Japan) in January 2023.

Mangrove Ecology, Silviculture and Conservation Peter Saenger, 2013-06-29 Mangroves are a fascinating group of plants that occur on tropical and subtropical shorelines of all continents, where they are exposed to saltwater inundation, low oxygen levels around their roots, high light and temperature conditions, and periodic tropical storms. Despite these harsh conditions, mangroves may form luxuriant forests which are of significant economic and environmental value throughout the world - they provide coastal protection and underpin fisheries and forestry operations, as well as a range of other human activities. This book provides an up-to-date account of mangrove plants from around the world, together with silvicultural and restoration techniques, and the management requirements of these communities to ensure their sustainability and conservation. All aspects of mangroves and their conservation are critically re-examined. Those activities which threaten their ongoing survival are identified and suggestions are offered to minimise their effects on these significant plant communities.

Human Impacts on Salt Marshes Brian R. Silliman, Edwin D. Grosholz, Mark D. Bertness, 2009-06-03 Human Impacts on Salt Marshes provides an excellent global synthesis of an important, underappreciated environmental problem and suggests solutions to the diverse threats affecting salt marshes.—Peter B. Moyle, University of California, Davis

Mangroves: Biodiversity, Livelihoods and Conservation Sudhir Chandra Das, Pullaiah, Elizabeth C. Ashton, 2022-05-24 This contributory volume is a comprehensive collection on the mangrove forest eco-system and its ecology, the resources and potentials of mangroves, conservation efforts, mangrove eco-system services and threats to conservation. The book is an all-inclusive compilation on the status, conservation and future of mangroves. Mangroves are a unique ecosystem providing several ecosystem services. They are formed in the inter-tidal areas of large rivers and coastal islands. Mangroves thrive due to constant interaction with the terrestrial and marine ecosystem. These are the species dynamics, varying tidal amplitudes, plant succession, changing floral pattern of the channels of the estuary, the varying sediment transportation. There was 20% decline in mangrove forest area in the last 25 years due mainly to conversion and coastal development. Lengthy recovery periods required for the degraded mangrove forests. Hence there is an urgent need

to take stock of the updated information on these mangroves at global level. It is of immense value to scientific community involved in teaching, research and extension activities related to mangrove conservation.

Mangrove Microbiome Sanjivkumar Muthusamy,Radhakrishnan Manikkam,Gopikrishnan Venugopal,2025-03-12 This book highlights the diversity, and industrial and bio-therapeutic applications of mangrove associated microbiomes. The bioactive metabolites from the mangrove microbiomes show high antimicrobial, antioxidant, anti-inflammatory, anticancer, antidiabetic and anti-biofilm activities. Their environmentally significant capabilities such as remediation, degradation and agriculture enhancing properties are discussed in this book as well. Mangroves are extremely nutrient-rich and productive ecosystems found adjacent to coastal waters and they stand at the base of an extensive food web. Diverse groups of metabolically active microbial populations of this ecosystem produce economically important bio-active metabolites which have environmental, cosmetic, food and biomedical industrial applications. This book aims to consolidate the research, bridge the knowledge gaps, and stimulate further research on mangrove microbiomes. It provides a valuable resource that benefits the scientific community, academic researchers, healthcare practitioners, and individuals interested in the potential use of microbial populations of mangrove ecosystem in managing bio-efficiencies.

Blue Carbon: Beyond the Inventory William Edward News Austin,Hilary Anne Kennedy,Joanne S. Porter,William Richard Turrell,Catherine Lovelock,2024-02-20 This Research Topic will coincide with an international Blue Carbon Conference at the Royal Society of Edinburgh in November 2021, during the UNFCCC COP26 climate negotiations; we seek to showcase Blue Carbon as a Nature-based Solution for Climate Change, People and Biodiversity. The conference theme identifies the growing climate mitigation opportunities presented by Blue Carbon, yet also seeks to highlight the emergent research that points to the wider climate mitigation services of carbon in the marine environment - what we are calling beyond the inventory. We welcome contributions that address the science and policy dimensions of Blue Carbon, particularly where these highlight opportunities and mechanisms for the protection, restoration and creation of Blue Carbon habitats. We also welcome case-study examples that highlight successful partnerships in a wide range of international settings and would particularly encourage contributions that show-case legal, policy or investment opportunities.

Brazilian Estuaries Paulo da Cunha Lana,Angelo Fraga Bernardino,2018-07-09 This book presents the main drivers of benthic structure and processes in estuaries from the 8,000 km-Brazilian coast, assesses the influence of natural and human disturbance, and discusses their ecological importance and management needs. Estuaries are unique coastal ecosystems often with low biodiversity that sustain and provide essential ecological services to mankind. These ecosystems include a variety of habitats with their own sediment and fauna dynamics, all of them globally altered or threatened by human activities. Mangroves, saltmarshes, tidal flats and other confined estuarine systems are under increasing stress by overfishing and other human activities leading to habitat and species loss. Combined changes in estuarine hydromorphology

and in climate pose severe threats to estuarine ecosystems at a global scale.

Pedometrics in Brazil Waldir de Carvalho Junior, Helena Saraiva Koenow Pinheiro, Marcos Bacis Ceddia, Gustavo Souza Valladares, 2024-09-11 In a world expected to reach a population of almost 10 billion inhabitants by 2050 and facing rapid global warming, it is essential to develop studies to better characterize and preserve the existing environmental heritage. Among these assets, soil stands out, which is fundamental for the balance of life on the planet (air quality and composition, temperature regulation, carbon and nutrient cycling, water cycling and quality, natural waste (decomposition) treatment and recycling, and habitat for most living things and their food). Due to its importance, soil information is increasing recently in order to attend human demands for land use management and capability, reduce erosion risks and soil security, for example. Particularly in Brazil, advances in soil science are now required to attend the new national systematic soil survey that has as a goal soil sustainability and security. Gathering machine learning tools, pedometrics and pedological concepts is a way to achieve these demands regarding soil data and related products. This book summarizes remarkable insights from the II Pedometrics Brazil Conference providing cutting-edge information to researchers, students and professionals working with soils in tropical countries such as Brazil.

Environmental Geochemistry in Tropical and Subtropical Environments Luiz Drude de Lacerda, Ricardo Erthal Santelli, Egbert K. Duursma, Jorge Joao Abrao, 2013-06-29 Three symposia on environmental geochemistry in tropical countries, held in Niterói, Brazil (1993), in Cartagena, Colombia (1996) and in Nova Friburgo, Brazil (1999), made it very clear that tropical geochemistry is of world standard and fast increasing in multi-disciplinarily and impact on important geochemical paradigms. It has additionally strong links with the economy of tropical countries, such as mining and industrialisation and is in full development for treating environmental problems caused by human activities of urban or industrial origin. We must compliment Prof. Jorge Abrião and his colleagues in Brazil and Dr. Gloria Prieto and her colleagues in Colombia for these initiatives. The participation of respectively 180 and 150 scientists, coming from 15 different countries for the first and second symposia, has shown that a large interest exists for tropical environmental geochemistry. It also demonstrates the necessity to understand tropical environmental problems. The organisation of a large international symposium is not possible without the assistance of state and federal authorities, for which those of Brazil and Colombia have to be complimented. The 3rd Symposium on Environmental Geochemistry in Tropical Countries was the last of the series and was attended by 22 countries and 170 participants and treated a number of related environmental and economic problems.

Wetland Ecosystems William J. Mitsch, James G. Gosselink, Li Zhang, Christopher J. Anderson, 2009-04-13 New focused text introduces readers to wetland ecosystems and systems approaches to studying wetlands. With its comprehensive coverage of wetland science, management, and restoration, Mitsch and Gosselink's *Wetlands* has been the premier reference on wetlands.

for more than two decades. Now, the coverage of specific wetland ecosystem types from earlier editions of this acclaimed work has been updated, revised, and supplemented with additional content in order to create this new text focusing exclusively on wetland ecosystems. This book now complements *Wetlands, Fourth Edition*. Following an introduction to ecosystems in general and wetland ecosystems in particular, *Wetland Ecosystems* examines the major types of wetlands found throughout the world: coastal wetlands, freshwater marshes and forested swamps, and peatlands. The final chapter reviews three fundamental systems approaches to studying wetlands: mesocosms, full-scale experimental ecosystems, and mathematical modeling. This new text features: Updated descriptions of the hydrology, biogeochemistry, and biology of the main types of wetlands found in the world New content introducing general ecosystems, wetland ecosystems, whole ecosystem and mesocosm experiments with wetlands, and systems ecology and modeling A detailed description of the ecosystem services provided by wetlands A broad international scope, including many examples of wetlands located outside North America Two new coauthors offering new perspectives and additional insights into the latest ecosystem and modeling techniques An abundance of illustrations helps readers understand how different biological communities and the abiotic environment in wetland ecosystems interact and function. Tables and text boxes provide at-a-glance summaries of key information. Lastly, each chapter concludes with a list of recommended readings. This text has been designed as an introduction for students and professionals in wetland ecology and management, general ecology, environmental science, and natural resource management.

Microbial ecology and ecosystems from a Southern perspective Veronica Molina, Yoanna Eissler, Céline Lavergne, Pilar Junier, 2023-01-06

Mangrove Ecosystems Volker Linneweber, 2013-06-29 Protection of the environment has nowadays become a major challenge and a condition for survival of future human generations and life on Earth in general. Yet it is still far too much of a dream or hope rather than a reality in the policy of our societies. Presently we are experiencing an unprecedented exponential growth of demography combined with a race for profit, resulting in excessive consumption particularly of energy, and a serious impact on the world ecosystems. Various types of pollutants and emerging new diseases not only disrupt the normal course of life, but also above this some of the atmospheric pollutants are most likely involved in the changing climate. We fear and literally shiver at the thought that the changing climate would ultimately disrupt the fragile thermodynamic equilibrium between the atmosphere and the oceans. Are we insensitive to these facts to the point of pushing our descendants, some generations ahead, into a new glacial period after a first period of warming up, at least, in northern Europe, like the one that took place 13 to 14 millennia ago? Surely the planet's nature is not prepared to be dominated by man and will go its way, whether humanity will be alive or dead.

Marine Biomes Susan L. Woodward, 2008-09-30 This volume in the Greenwood Guides to Biomes of the World: covers the

saltwater biomes that exist along coastline, on the continental shelf, and the open sea, examining all aspects that define these biomes: ; Vegetation ; Geographical Distribution ; Challenges posed by the environment ; Adaptation of the plants and animals to the environment ; Conservation efforts Maps, photos, diagrams, drawings, and tables accompany the text, as do sidebars that highlight habitats, species, and ecological relationships. The volume includes a bibliography of accessible resources for further research.

Sabkha Ecosystems M. Ajmal Khan, Benno Boër, Münir Öztürk, Miguel Clüsener-Godt, Bilquees Gul, Siegmund-W. Breckle, 2016-06-22 This book is a part of the Sabkha Ecosystems series which was designed to provide information on sabkha ecosystems of different regions and to add to the collective knowledge available about saline ecosystems. The comprehensive coverage assists the reader gaining a thorough understanding of sabkha geology, hydrology, geomorphology, zoology, botany, ecology and ecosystem functioning, as well as sabkha conservation, utilization and development. Volume I focused on The Arabian Peninsula and Adjacent Countries, volume II was based on describing saline ecosystems of West and Central Asia, volume III referred to Africa and Southern Europe, while volume IV focused on Cash Crop Halophyte and Biodiversity Conservation. The present volume V focuses on Americas.

Dynamic Sedimentary Environments of Mangrove Coasts Daniel Friess, Frida Sidik, 2020-12-05 Dynamic Sedimentary Environments of Mangrove Coasts provides knowledge on the importance of sedimentary dynamics in managing mangrove forests. In the first part of the book, the editors seamlessly offer a general introduction of mangrove sedimentary dynamics. This leads into more in-depth information on soil surface elevation change, sea level rise, and the importance of sedimentary dynamics in the loss or gain of blue carbon. The book concludes the discussion of mangrove sedimentary dynamics by addressing the issues of climate change (e.g. sea level rise and blue carbon) on mangrove restoration and sediment. This book will assist coastal managers and academics in addressing the gaps in mangrove restoration and coastal management. As such, it will be a valuable reference for advanced undergraduate students, graduate students, researchers, academics in the field of coastal restoration, and coastal management practitioners. - Provides a state-of-the-art summary of research into sedimentary dynamics in mangrove forests - Includes updates on issues of climate change-relevant to mangroves, such as blue carbon and sea level rise - Presents scientific background and successful case studies for mangrove restoration that can solve problems relating to mangrove management

Brazilian Deep-Sea Biodiversity Paulo Yukio Gomes Sumida, Angelo Fraga Bernardino, Fabio Cabrera De Léo, 2020-10-27 This book presents the biodiversity of the Brazilian deep-sea and its many unique geological and biological features, as well as a review of its ecology, conservation, and future research needs. The deep-sea Brazilian margin has an incredible geological heterogeneity with numerous characteristic seafloor features, and latitudinal changes in marine

productivity, oceanographic conditions and biological communities have resulted in very distinct biological assemblages at regional and bathymetric scales. It is a tremendously rich ecosystem in terms of living species, from which many well-known historical tales have originated, and with unique importance for the global climate and humanity. Nevertheless, vast areas of the Brazilian margin have been explored for fishing, oil and gas, and other commodities, likely impacting a variety of deep-sea habitats at scales and intensities yet undetermined. This book is intended for students, scholars, professionals and a wide audience interested in the deep-sea in general and, more specifically, in the South Atlantic deep-sea.
