Atlante delle sorgenti della Provincia di Latina Carlo Gazzetti, Antonio Loy, Silvia Rossi, Paolo

Sarandrea, 2016-01-03T00:00:00+01:00 L'esigenza di censire e raccogliere in un atlante sistematico tutte le sorgenti non è certamente una novità ed è connessa con il valore strategico che la disponibilità di risorse idriche riveste per lo sviluppo di qualsiasi territorio. La conoscenza di informazioni aggiornate e di adeguato dettaglio sull'ubicazione, la portata delle sorgenti e i deflussi di base in alveo, le caratteristiche chimico-fisiche delle acque e il loro utilizzo è infatti fondamentale in qualsiasi analisi idrogeologica applicata alla pianificazione basata sui principi di uno sviluppo sostenibile. Nel presente Atlante l'attenzione è stata mirata soprattutto alla definizione della corretta ubicazione delle emergenze individuando i punti sulla cartografia di dettaglio ed elaborando schemi illustrativi delle aree sorgive, associati a fotografie e ad una sintetica descrizione dello stato dei luoghi. La descrizione viene completata da una sintesi delle misure di portata e dei parametri chimico-fisici delle acque eseguite dai diversi autori, integrate, anche a scopo di verifica, confronto ed aggiornamento, con misure eseguite appositamente. Testi e contributi a cura di Carlo Gazzetti, Antonio Loy, Silvia Rossi, Paolo Sarandrea.

Ancient Water Technologies L. Mays, 2010-05-19 There is no more fundamental resource than water. The basis of all life, water is fast becoming a key issue in today's world, as well as a source of conflict. This fascinating book, which sets out many of the ingenious methods by which ancient societies gathered, transported and stored water, is a timely publication as overextraction and profligacy threaten the existence of aquifers and watercourses that have supplied our needs for millennia. It provides an overview of the water technologies developed by a number of ancient civilizations, from those of Mesopotamia and the Indus valley to later societies such as the Mycenaeans, Minoans, Persians, and the ancient Egyptians. Of course, no book on ancient water technologies would be complete without discussing the engineering feats of the Romans and Greeks, yet as well as covering these key civilizations, it also examines how ancient American societies from the Hohokams to the

Mayans and Incas husbanded their water supplies. This unusually wide-ranging text could offer today's parched world some solutions to the impending crisis in our water supply. This book provides valuable insights into the water technologies developed in ancient civilizations which are the underpinning of modern achievements in water engineering and management practices. It is the best proof that the past is the key for the future. Andreas N. Angelakis, Hellenic Water Supply and Sewerage Systems Association, Greece This book makes a fundamental contribution to what will become the most important challenge of our civilization facing the global crisis: the problem of water. Ancient Water Technologies provides a complete panorama of how ancient societies confronted themselves with the management of water. The role of this volume is to provide, for the first time on this issue, an extensive historical and scientific reconstruction and an indication of how traditional knowledgemay be employed to ensure a sustainable future for all. Human Pharmaceuticals, Hormones and Fragrances Thomas Ternes,Adriano Joss,2007-01-30 The observed concentrations of pharmaceuticals and personal care products (PPCPs) in raw wastewater confirm that municipal wastewater represents the main disposal pathway for the PPCPs consumed in households, hospitals and industry. In sewage treatment plant effluents most PPCPs are still present, since many of these polar and persistent compounds are being removed only partially or, in some cases, not at all. Treated wastewater therefore represents an important point source for PPCPs into the environment. After passing a sewage treatment plant the treated wastewater is mostly discharged into rivers and streams or sometimes used to irrigate fields. If drinking water is produced using resources containing a substantial proportion of treated wastewater (e.g. from river water downstream of communities) the water cycle is closed and indirect potable reuse occurs. *Human Pharmaceuticals, Hormones and Fragrances* provides an overview of the occurrence, analytics, removal and environmental risk of pharmaceuticals and personal care products in wastewater, surface water and drinking water. The book covers all aspects of the fate and removal of PPCPs in the whole water cycle: consumption and occurrence, analytical methods, the legal background, environmental risk assessment, human and animal toxicology, source control options, wastewater and drinking water treatment as well as indirect reuse. The book presents a summary of the results obtained during the EU project Poseidon, combined with further expert knowledge on the field, and is written at a level appropriate for professionals involved in management of water resource quality. Professionals in the field including decision makers, engineers and scientists, as well as students entering the field, will find this an invaluable source of information. First comprehensive study on the assessment, fate and removal of pharmaceuticals and personal care products in wastewater and drinking water treatment. Emphasises the importance of micropollutants in the water cycle, provides methods for quantifying their fate and technologies for their removal.
