Food Warren Belasco, 2008-10-15 Food: The Key Concepts presents an exciting, coherent and interdisciplinary introduction to food studies for the beginning reader. Food Studies is an increasingly complex field, drawing on disciplines as diverse as Sociology, Anthropology and Cultural Studies at one end and Economics, Politics and Agricultural Science at the other. In order to clarify the issues, Food: The Key Concepts distills food choices down to three competing considerations: consumer identity; matters of convenience and price; and an awareness of the consequences of what is consumed. The book concludes with an examination of two very different future scenarios for feeding the world's population: the technological fix, which looks to science to provide the solution to our future food needs; and the anthropological fix, which hopes to change our expectations and behaviors. Throughout, the analysis is illustrated with lively case studies. Bulleted chapter summaries, questions and guides to further reading are also provided.--P. [4] of cover.

Microorganisms in the Deterioration and Preservation of Cultural Heritage Edith Joseph, 2021-05-06 This open access book offers a comprehensive overview of the role and potential of microorganisms in the degradation and preservation of cultural materials (e.g. stone, metals, graphic documents, textiles, paintings, glass, etc.). Microorganisms are a major cause of deterioration in cultural artefacts, both in the case of outdoor monuments and archaeological finds. This book covers the microorganisms involved in biodeterioration and control methods used to reduce their impact on cultural artefacts. Additionally, the reader will learn more about how microorganisms can be used for the preservation and protection of cultural artefacts through bio-based and eco-friendly materials. New avenues for developing methods and materials for the conservation of cultural artefacts are discussed, together with concrete advances in terms of sustainability, effectiveness and toxicity, making the book essential reading for anyone interested in microbiology and the preservation of cultural heritage.

Environment and Sustainable Development M.H. Fulekar,Bhawana Pathak,R K Kale,2013-10-04 Global society in the 21st century is facing challenges of improving the quality of air, water, soil and the environment and maintaining the ecological balance. Environmental pollution, thus, has become a major global concern. The modern growth of industrialization, urbanization, modern agricultural development and energy generation has resulted in the indiscriminate exploitation of natural resources for fulfilling human desires and needs, which has contributed in disturbing the ecological balance on which the quality of our environment depends. Human beings, in the truest sense, are the product of their environment. The man-environment relationship indicates that pollution and deterioration of the environment have a social origin. The modern technological advancements in chemical processes/operations have generated new products, resulting in new pollutants in such abundant levels that they are above the self-cleaning capacity of the environment. One of the major issues in recent times is the threat to human lives due to the progressive deterioration of the environment from various sources. The impact of the pollutants on the environment will be significant when the accumulated pollutants load will exceed the carrying capacity of the receiving environment. Sustainable development envisages the use of natural resources, such as forests, land, water and fisheries, in a sustainable manner without causing changes in our natural world. The Rio de Janeiro-Earth Summit, held in Brazil in 1992, focused on sustainable development to encourage respect and concern for the use of natural resources in a sustainable manner for the protection of the environment. This book will be beneficial as a source of educational material to post-graduate research scholars, teachers and industrial personnel for maintaining the balance in the use of natural sources for sustainable development.

Understanding the Entrepreneurial Mind Alan L. Carsrud,Malin Brännback,2009-07-30 Interest in the functioning of the human mind can certainly be traced to Plato and Aristotle who often dealt with issues of perceptions and motivations. While the Greeks may have contemplated the human condition, the modern study of the human mind can be traced back to Sigmund Freud (1900) and the psychoanalytic movement. He began the exploration of both conscious and unconscious factors that propelled humans to engage in a variety of behaviors. While Freud's focus may have been on repressed sexuality

our focus in this volume lies elsewhere. We are concerned herein with the expression of the cognitions, motivations, passions, intentions, perceptions, and emotions associated with entrepreneurial behaviors. We are attempting in this volume to expand on the work of why entrepreneurs think differently from other people (Baron, 1998, 2004). During the decade of the 1990s the field of entrepreneurship research seemingly abandoned the study of the entrepreneur. This was the result of earlier research not being able to demonstrate some unique entrepreneurial personality, trait, or characteristic (Brockhaus and Horwitz, 1986). It was both a naïve and simplistic search for the “holy grail” of what made entrepreneurs the way they are. However, many of the researchers in this volume have never gave up the belief that a better understanding of the mind of the entrepreneur would give us a better understanding of the processes that lead to the creation of new ventures.
